Qualitative-quantitative one-minute *in vitro* latex agglutination slide test for detection of rheumatoid factor in blood or serum. Standardized against the World Health Organization International Reference Preparation of R. A. Serum.

Ordering Information: Includes 25 disposable paper slides containing one drop each of dried human gamma globulin-coated latex suspension and dried glycine buffer; 25

Dispenstirs® designed to deliver 0.03ml drop; dropper bottle; positive and negative controls; 10ml glycine buffer concentrate; and instructions.

Slides need no refrigeration. Stable for 18 months at room temperature.

100 Test Kit
OR154R45.00

Organon Monosticon® Reagents

Dri-Dot® Test Kit

OR164R

Qualitative-quantitative two-minute differential slide test for detection of infectious mononucleosis in whole blood, serum, or plasma. Each Monosticon Dri-Dot® disposable paper slide contains one drop each of guinea pig antigen and horse/sheep antigen-dried.

For slide holder OR 1349, see p 741.

Ordering Information: Contains all necessary reagents to perform test. Stable for 18 months at room temperature.

25-Test Kit: With 25 disposable paper slides, 25 Dispensstirs® dropper vial for water, instructions. **OR164P**.....22.25

100-Test Kit: With 100 disposable paper slides, 100 Dispensstirs, dropper vial for water, instructions. **OR164R**.....82.50

Two-Minute Slide Test

OR 161 S

Two-minute differential slide test for detection of infectious mononucleosis in whole blood, serum, or plasma.

Ordering Information: Contains all necessary reagents to perform test. Reagents — sheep antigen, guinea pig antigen, beef antigen, and positive control serum — packaged in dispenser. With lancets, polypropylene stirrers, glass

slide, and instructions. Stable for 1 year at 2° to 8°C.

Emergency care for lab burns

When an accident happens, turn to this handy Emergency Burn Relief Station for fast relief. Station holds two 6-oz cans of Americaine Burn Relief Spray. Safe, fast, temporary comfort from pain of minor burns. The 17x11" backboard screws securely to wall. **Cat. No. 10-030**, just \$15.50. Americaine Spray refill is **Cat. No. 10-030-5**; \$17.85 for case of six 6-oz cans.

Safety First

A 64-page manual of what it takes to satisfy OSHA — plus valuable chapters on accident prevention, first aid, firefighting. Illustrated. Check 2 on reader service card at end of blue index pages.

Oxford® Tri-Chol®

Handles triglyceride and cholesterol — simultaneously

Oxford Tri-Chol Reagent System determines serum triglycerides and cholesterol (using Cholesterol reagent) colorimetrically or fluorimetrically. Lipid analyses are faster, more efficient.

All interference from phospholipids, glucose, bilirubin is eliminated by preactivated extraction mixture, used with isopropyl alcohol, and supplied premeasured in stoppered tubes.

Three-part system includes triglyceride reagent set with extraction mixture, single stable cholesterol reagent, and lipid standard set.

OX0943

Description	No. Tests	Cat. No.	Set	Case of

Oxford® Catecholamine Set

Reliable . . . convenient

Accurately determines total free catecholamines in urine by fluorimetry. Valuable for detecting presence of adrenal gland tumors related to investigations of hypertension. Also differentiates between noradrenalin and adrenalin.

Fluorometric procedure performed on 5ml pre-tested urine samples. Uniform alumina in disposable column adsorbs catecholamines, which are then eluted, oxidized to the chromes, rearranged to fluorescent lutines.

Ordering Information: With 40 disposable columns, necessary reagents in working concentrations, and standard. No refrigeration necessary.

OX330Set/55.25
Case of 4 sets/198.90

Accessories for Catecholamine Set

Rack set. Holds 22 alumina columns. With elution rack and waste tray.

OX340Set/19.00

Columns. Alumina-filled. Replacement for OX330 Catecholamine Test Set.

Oxford® Diffu-Gen™ Kits

For radial immunodiffusion

Identify and quantitate immunoglobulins G, A, and M . . . it's precise and easy with Oxford® Diffu-Gen RID Kits.

Each kit has 3 Diffu-Gen color-coded plates, 3 ready-to-use standard reference sera and control sera. Kit components are also available separately.

Each Diffu-Gen plate contains a heavy chain specific antiserum incorporated in agarose gel. Each plate has 12 wells; 3 for reference sera, 1 for control serum, and 8 for different patients' sera. Diameter and volume of wells are carefully controlled for uniformity.

Pipet reference sera, control serum, and patients' sera into wells of plate. Select incubation temperature and time period for desired testing method — either measured time or maximum diffusion. Incubate. Read precipitin rings to 0.1mm with OX1212 illuminator/reader. With readings, prepare reference chart to identify immunoglobulin classes.

Ordering Information: Diffu-Gen Profile Kit. Includes one plate each for IgG, IgA, and IgM immunoglobulins; 0.5ml reference sera (3 each of OX1215, OX1216 and OX1217); plus control serum.
OX120442.00

Low-Level Profile Kit. Use to detect immunoglobulin deficiencies in cases where patients demonstrate suppression or absence of levels in regular plates. Provides greater sensitivity and more accurate quantitations of IgG, IgA, and IgM. Includes one plate each for IgG, IgA, IgM; twelve 5µl vials of reference serum; graph paper; work record; instructions.
OX121040.00

Diffu-Gen Kits. Include 3 plates, 3 reference sera (0.5ml each of high, medium, and low), plus control serum.

For Immunoglobulin	Cat. No.	Ea
IgG	OX1201	40.00
IgA	OX1202	40.00
IgM	OX1203	40.00

Diffu-Gen Low-Level Kits. Used in newborn screening, pediatric testing, primary deficiencies, and secondary deficiencies. Include three plates and 0.5ml vial of reference serum.

For Immunoglobulin	Cat. No.	Ea
IgA	OX1242	36.00
IgM	OX1243	36.00

OX1201

Accessories for Diffu-Gen Kits

Profile Plates. Include one plate each for IgG, IgA, and IgM.
OX1208Pk/32.00

Diffu-Gen Plates, with 12 wells per plate.

For Immunoglobulin	Cat. No.	Pk of 3
IgG	OX1205	32.00
IgA	OX1206	32.00
IgM	OX1207	32.00

Diffu-Gen Plates, with 12 wells per plate. Same as above plates but packed in large quantities.

For Immunoglobulin	Cat. No.	Pk of 10
IgG	OX1245	99.00
IgA	OX1246	99.00
IgM	OX1247	99.00

Reference Serum, Elevated. For high volume users desiring to perform their own dilutions. One 0.5ml vial each of IgG, IgA, and IgM.
OX1209Pk/9.00

Reference Serum. IgG. Undiluted. For use in "measured time" determinations when patient's serum is not to be diluted prior to testing. One 0.5ml vial each of high, medium, and low IgG sera.
OX1214Pk/9.00

Reference Sera. Diluted and ready to use. Pack contains one vial each of high, medium, and low sera.

For Immunoglobulin	Cat. No.	Pk
IgG	OX1215	5.50
IgA	OX1216	5.50
IgM	OX1217	5.50

Control Serum. Three vials, each containing 0.5ml of control serum.
OX1218Pk/5.50

Oxford® Stone Analysis Set

OX322

Analyzes urinary calculi in stones

Contains all reagents needed to detect carbonate, cystine, phosphate, magnesium, calcium, ammonium, uric acid, and oxalate. Provides convenient, simple routine with good analytical technique. Results are clear, easy to read.

Ordering Information: Reagents for 50 analyses. In convenient dropper bottles. With reagents and flow diagram.
OX32225.00

Anti-Human Antiserum. For labs preferring to make their own immunodiffusion plates. Ideal for research, university chemical labs, and medical school centers. In 2ml vials.

For Immunoglobulin	Cat. No.	Ea
IgG	OX1219	14.00
IgA	OX1220	14.00
IgM	OX1221	14.00

Anti-Whole Human Serum. Displays antibodies of most human-serum components by immunoelectrophoresis. For use by clinical labs for rapid screening and in research for broader investigation. In 2ml vial.
OX124014.00

Graph Paper. 50 sheets.
OX1213Pk/4.00

Illuminator/Reader. 115V 50/60Hz.
OX1212110.00

Oxford® StaT₃ and StaT₄ Systems

Simplify T₃ and T₄ thyroid evaluations

StaT₃ System

Rapid and highly reproducible T₃ uptake procedures. Each test unit is disposable, leak-proof, unbreakable vial containing magnesium carbonate, buffers, stabilizers, and radioactive L-Triiodothyronine. Eliminates transferring or pipetting radioactive material.

Simple three-step operation: (1) add 0.2ml of serum and 3ml of water to vial (color change indicates that serum has been added to vial); (2) shake and let stand for 10 min; (3) centrifuge and count.

Highly reproducible . . . independent of incubation time and temperature. No refrigeration needed. All StaT₃ items require AEC license number when ordering.

No. of Tests	Cat. No.	Pk

300	OX982-3	345.00
400	OX982-4	420.00
500	OX982-5	475.00
1000	OX982-10	850.00

StaT₄ System

Fast, safe *in vitro* diagnostic test to determine thyroxine (T₄) in serum by competitive protein binding.

Easier than most other T₄ procedures. Only 3 pipetting steps. 10- to 20-minute incubation. No solvent-drying step in extraction procedure.

Highly reproducible . . . independent of incubation time and temperature. Run sample and standards simultaneously. Only one count per sample.

Complete with unbreakable plastic vials, extractant, and absorbent. When ordering, please state AEC license number.

For quantitative UV determination of glutamic-oxaloacetic transaminase at 340nm, requires 0.2ml sample. Reaction temperature, 30°C. Minimum shelf life, 1 yr.

Size	Cat. No.	Box
40x3ml	PB825	22.50
10x16	PB825-10	22.40

DeltaTest Controls I and II

Human lyophilized sera with assayed values for all Princeton Biomedix test kit components. Size: 6x3ml.

Delta Test Control I. Normal.
PB901-6Box/13.50

Delta Test Control II. Abnormal.
PB902-6Box/13.50

Princeton Biomedix® Amylo-Tube®

Stable, single-tube test for routine assay of amylase in serum, plasma, urine, or duodenal fluid. Combines convenience of pre-filled substrate tube with precision of modern iodometric methodology.

Requires minimal 0.01ml sample. Takes less than 15 minutes working time. No curves to plot. No need to centrifuge. Correlates well with usual abnormal enzyme controls.

All reagents supplied. Stable at room temperature. With temperature correction table. Test can be run at other than 37°C.

PB820
PB819

Princeton Biomedix Glutathione Erythrozyme® Assay Set

Enough reagents and supplies for 20 quantitative colorimetric determinations for *in vitro* diagnostic use. Consists of two 30ml bottles of glutathione reagent solution, 20 dry buffer tubes, 2 DTNB standard tubes, 2 Thiol tubes.

PB EZ04.....Box/18.00

PB EZ04

Princeton Biomedix Erythrozyme® Assays

Three Erythrozyme sets complete with test tubes, prefilled with lysing and substrate reagents, for 5 fully quantitative, precise assays that require only minimum samples of whole blood, take less than 5 minutes working time, can be run singly or in batches. Reagents stable under refrigeration.

PB EZ01

Erythrocytic G-6PD

Measure glucose-6-phosphate dehydrogenase levels.

Easy-to-use. For each assay, reconstitute one lysing tube and one substrate tube. Add 10 lambda whole blood to lysing tube to exhaust 6-phosphogluconate dehydrogenase and make hemolysate. Measure change in optical density; calculate G-6PD level as IU/10¹⁰ erythrocytes (RBC count) or IU/ml of erythrocytes (hematocrit). Highly reproducible. Assay is linear for at least 20 minutes.

PB EZ01.....Set/6.50

PB EZ02

Erythrocytic 6-PGD

Study 6-phosphogluconate dehydrogenase with method based on kinetic assay. Procedure similar to G-6PD assay. Assay is linear for approx 10 minutes.

PB EZ02.....6.50

PB EZ03

Red Blood Cell Pyruvate Kinase

Unique methodology eliminates leukocytic PK.

To use: collect whole blood in a heparinized microhematocrit capillary tube. Pipet separates packed red cell layer into reconstituted lysing tube, proceed as in G-6PD assay. Results in IU/ml erythrocytes.

PB EZ03.....6.50

Roche Placentex® Test

RD43015

Latex agglutination-inhibition pregnancy tube test detects HCG (human chorionic gonadotropin) at 1.0 IU per ml. Results obtained within 60 to 90min. Minimal interference from hemoglobin, specific gravity, and protein. No vibration effects, no atypical ring, results interpreted by flocculation.

All materials in ready-to-use form. Tubes are pre-filled with 2.0ml of antiserum reagent. No special preparation necessary. Less than 1min needed for setup.

To use: add 1 ml of urine to Placentex tube. Add 2 drops of antigen reagent to tube. Mix and place in water bath or heating block for 1½ hours at 37°C. Read

results. Positive test shows no flocculation within 90 min. Negative test does, often within 60 min.

Ordering Information

25-Test Kit. With 2.2ml antigen reagent, 1 dropper, and 25 test tubes pre-filled with 2.0ml antiserum reagent.

RD43015Box/35.10

100-Test Kit. With four 2.2ml bottles antigen reagent, 4 droppers, and 100 test tubes pre-filled with 2.0ml antiserum reagent.

RD43048Ea/114.00

Roche Pregnosis® Test

RD 43047

"Macro-agglutination" — clear, heavy clumping of latex particles — signifies end-point of Pregnosis indirect slide test for pregnancy. Permits quick, accurate readability. Leaves little chance for misinterpretation or false-positive results. Eliminates need to distinguish slight degrees of agglutination.

Other advantages of Pregnosis Test:

- Assured sensitivity of 1.5-2.5 IU/ml;
- Accurate detection of early pregnancy, in some cases as early as 5 days after first missed period;
- No specimen filtration required;
- Reliability rarely affected by proteinuria hemoglobinuria, specific gravity or drugs such as methadone, oral contraceptives, and phenothiazines.

Specifications:

Specimen:	Urine
Procedure time:	2 minutes
Method:	Indirect agglutination
Preparation of specimen:	None
Sensitivity:	1.5-2.5 IU/ml
Accuracy:	97% range
Interferents:	None
Requires control:	No
Readability:	Distinct clumping
Detection of HCG:	As early as 5th day after first missed period. Day 33.

Roche Amylochrome® Assay

Simple, rapid, reproducible Amylochrome® method for photometrically measuring amylase in serum, urine, other body fluids.

Method takes only 8min actual working time. Requires 0.1ml specimen. In single test tube, human amylase hydrolyzes dyed polysaccharide, releasing soluble dyed fragments in direct proportion to amylase activity. Optical density read photometrically at 625nm.

Obeys zero order kinetics. Linear in activity to 600 dye units. No control required. No deproteinization. No interference from hemoglobin, bilirubin

Ordering Information: Includes buffered dyed polysaccharide tablets, stock standard solution, and diluent.

BEST IN THE WEST. And East, North, South. Squared-off FISHERbrand® Petri dishes have most functional design to date. One-hand handling, yet firm sure grip. Obstruction-free polystyrene lids. Sterile. And disposable. Check page 247 for full information.

Roche Liquoid™ Blood Culture

45ml superior medium for fast detection of bacteria in circulating blood.

Tryptic soy broth includes 0.05% Liquoid (sodium polyanethol sulfonate) in atmosphere of CO₂ and air under negative pressure.

RD43001

Bottle provides optimal total environment for growing both aerobic and anaerobic organisms.

RD43001Box of 12/14.40

Lot of 5 boxes, per box/12.96

Lot of 9 boxes, per box/11.76

Roche Grobax® Additive

For blood culture media

Grobax®, sterile 5% aqueous solution of sodium polyanethol sulfonate, is recommended as an additive for blood culture media. Heat-stable, synthetic anti-coagulant: detects up to 36% more cases of bacteremia, shortens incubation time by as much as 7 days, and permits growth of aerobic and anaerobic organisms. Four 10ml vials per box.

RD43000Box/19.20

Roche FLURAM

For amino acid research

Roche FLURAM (fluorescamine) reacts with amino acid and fluoresces.

RD43023(100mg)/12.00

RD43026(1g)/80.00

Roche Enterotube®

Differentiates enterobacteriaceae in 1 step

Enterotube used to identify facultatively anaerobic gram-negative rods isolated from any specimen, e.g. urine, blood, stool, sputum, wound exudates, and spinal fluid.

Enterotube, a self-contained, sterile compartmented plastic tube, houses 8 conventional media plus an enclosed inoculating needle. When well-isolated oxidase-negative colony is drawn with needle through Enterotube, all media are inoculated simultaneously. Subsequent reactions can be interpreted for 11 biochemical tests:

- dextrose
- lactose
- gas production
- phenylalanine deaminase
- lysine decarboxylase
- dulcitol
- ornithine decarboxylase
- urea
- H₂S
- Simmons' citrate
- indole

Pick colony with needle; draw through media and out. Re-insert needle to H₂S/indole compartment; break off. Remove blue tape. Incubate tube at 35°-37°C for 24 hours. Interpret, record results. Perform indole test.

Advantages:

Accuracy . . . excellent agreement with conventional methods.

Simplicity . . . easy to use and read. Results determined by clear-cut reactions.

Convenience . . . simultaneous inoculation from single colony performs 11 tests in 1 tube.

Speed . . . read results in 24 hours.

Assurance . . . avoids contamination, errors inherent in multiple tube techniques. Compartments

help eliminate cross-contamination of media ingredients.

Stability . . . expiration date marked.

Economy . . . saves time (eliminates media preparation, glassware washing, sterilization). Saves materials, storage space.

Inoculum control . . . dextrose compartment confirms inoculation of entire tube.

Computer Coding System . . . a computer-generated identification system which assigns code numbers to the 11 biochemical results from Enterotube. Available at no charge from your Fisher Scientific representative.

Ordering Information

RD43002Box of 25/48.75

Roche OXI/FERM™ TUBE

Identifies oxidative-fermentative bacteria

OXI/FERM™ TUBE used for rapid differential identification of oxidative-fermentative gram-negative rods isolated from any specimen, e.g. urine, blood, stool, sputum, spinal fluid and wound exudates.

OXI/FERM TUBE, a self-contained, sterile, compartmented plastic tube, houses 8 conventional media plus an enclosed inoculating needle. The OXI/FERM TUBE permits the inoculation of all media and the subsequent performance of 9 standard biochemical tests:

- OF anaerobic dextrose
- arginine dihydrolase
- N₂ gas production
- H₂S
- indole
- OF xylose
- OF aerobic dextrose
- urea
- Simmons' citrate

Pick large inoculum with needle; draw through media and out. Reinsert needle through anaerobic dextrose, arginine, and nitrogen gas compartments; break off. Remove blue tape. Incubate tube at 35° to 37°C for 48 hours. Interpret, record results. Perform indole test.

RD43081

Advantages:

Accuracy . . . excellent agreement with conventional methods.

Standardization . . . uniform and systemized approach to media selection, methodology, readout, and identification of these organisms.

Simplicity . . . easy to use and read; results determined by clear-cut reactions.

Speed . . . simultaneous inoculation performs 9 tests.

Convenience . . . 9 tests in one tube.

Assurance . . . avoids contamination and errors inherent in multiple tube techniques; unique "compartments" help to eliminate cross-contamination of media ingredients.

Stability . . . expiration date provided for increased confidence.

Economy . . . saves time (eliminates media preparation, glassware washing, sterilization), materials, and storage space.

Computer Coding System . . . a computer-generated identification system which assigns code numbers to the biochemical results from OXI/FERM TUBE. Available at no charge from your Fisher Scientific representative.

Roche Bact-Chek® Discs

For bacteriological quality control

Bact-Chek® Bacterial Control Cultures in disposable dry-disc form provide easy-to-use system for quality control in bacteriology. Virtually eliminate need for stock cultures.

Set of 10 viable organisms features: predictable reactions for easy monitoring of all phases of diagnostic bacteriology . . . key biochemical media: selective, differential, and general growth media; reagents and stains; and antibiotic discs. Convenient disc form . . . ready to use; disposable. Standardization . . . disc-to-disc bacterial uniformity. Reduced error due to mutation, contamination, and viability loss. Complete sample logs and tables for evaluation and review.

Bact-Chek saves time, space, cost. Improves quality, performance. Meets standards set by Joint Commission on Accreditation of Hospitals for effective microbiological quality control.

Ordering Information: Includes 10 standard bacterial strains: *Escherichia coli*, *Enterobacter cloacae*, *Proteus vulgaris*, *Staphylococcus aureus*, *Staphylococcus epidermidis*, *Salmonella typhimurium*, *Pseudomonas aeruginosa*, *Streptococcus pyogenes*, *Shigella sonnei*, and *Klebsiella pneumoniae*. 30 discs (same organism) per vial, ten vials per set

Stanbio Clinical Chemistry Test Sets

Chloride Test Set

Simplified colorimetric procedure for determining chloride in serum, plasma, spinal fluid, perspiration, or urine filtrate. Results accurate to $\pm 2\%$ for values from 80 to 120mEq/liter. Cost per determination only 34 cents.

Method, modified Schoenfeld and Lewellen. Just mix 0.5ml of specimen with 2.0ml of TCA reagent. Let stand for 2min. Centrifuge for 5 min at 2500rpm. Mix 1.0ml of filtrate with 4.0ml of chloride color reagent. Read results immediately or within 30min.

Ordering Information: With chloride color reagent, TCA precipitating reagent, and chloride standard. Reagents stable for 1 year. 50 tests per set.

SB200.....17.00

SB200

Salicylate Test Set

Rapid colorimetric procedure for determining salicylate levels in whole blood, serum, plasma, urine, and cerebrospinal fluid. Uses Trinder methodology. No venipuncture necessary when whole blood specimen used.

Tests performed on macro (1.0ml specimen volume) or micro (0.1ml specimen volume) scale. Just add color reagent to sample. Mix and centrifuge. Read supernatant. Cost per determination: macro, 43 cents; micro, 9 cents.

Testing operation involves simultaneous protein precipitation and color development. Inhibition of color development due to phosphate and oxalate eliminated by use of high concentrations of ferric iron in color reagent.

Ordering Information: With color reagent and 40mg% standard. Color reagent stable for 2 years at room temperature; standard, for 1 year under refrigeration. 48 macro tests or 240 micro tests per set.

SB290.....20.75

Total Pregnancy Estrogen Test Set

Kober reaction method for determination of total urinary estrogens. Analyze up to 5 specimens and set of standards in less than 2 hr or 10 specimens in 3hr.

Requires 2ml aliquot of a urine specimen. Results unaffected by presence of glucose and protein. Doesn't involve acid hydrolysis of urine and resultant artifact formation.

Procedure involves extraction of total estrogen from urine sample by lowering pH, saturating with sodium chloride, and extracting with ethyl acetate. Estrogen fraction is then analyzed colorimetrically. Then quantitated as estriol by comparison with standard.

Ordering Information: With extraction solvent, color reagent, TCA solution, color extraction solution, estriol standard, extraction tubes, and color tubes. 24 tests per set.

SB450.....137.50

Replacement Reagents and Tubes for Clinical Chemistry Test Sets

Color Reagent. 180ml.
SB452.....9.75

TCA Solution. 2N. 100ml.

Wampole Pregnancy Tests

UCG-Titration Set™

Simple 5-minute titration procedure for quantitation of human chorionic gonadatropin. Can be run on urine or serum specimens: is not affected by drug ingestion.

Control run with each test. Dilutions can be performed and read simultaneously. End-point is clearly defined. Results can be read 2 hours after titration.

Ordering Information: Contains reagents and test tubes for 45 dilutions, controls, and test tube rack. Actual sensitivity level printed on each box.

50	WA15H4	80.85
300	WA15H6	339.60

UCG-Slide Test®

Two-minute test, sensitive to 2 IU of HCG/ml urine. Clearly legible agglutination results virtually eliminate misinterpretation.

Detects pregnancy as early as 5th day after missed period. Rarely affected by presence of protein or low specific gravity. Clumping (macroagglutination) indicates negative result.

No special preparation necessary. Urine, antiserum, latex all mixed in one step. Saves time, error.

With anti-human chorionic gonadotropic serum (rabbit). HCG-coated latex suspension, disposable pipets with rubber bulbs, stirrers, glass slide, instructions.

No. of Tests	Cat. No.	Box
30	WA15L3	29.70

UCG-Quiktube™ Test

One-hour tube test, detects one international unit, human chorionic gonadotropin/ml urine. Easy to use. Shorter setup time. No dilution of urine necessary.

Detects pregnancy as early as 4th day after missed period. Positive results readable usually within 1hr; negatives confirmed within 2hr.

Patient control provided for every test. Alerts to presence of interfering substances. Over-all accuracy, 98%.

Ordering Information: With anti-human chorionic gonadotropic serum (rabbit), HCG-coated reagent red blood cell suspension (sheep), buffered saline control solution, and droppers. Shelf life, 18 months. Store reagents at 2° to 8°C. 25 tests per box.

DAP·Test® — Macro

Detects human chorionic gonadotropin (HCG) with sensitivity of approx 2 units per ml.

One-step, 2-min procedure for plasma, serum, and urine specimens gives positive readings as early as 4 days after missed period. No false positives from protein interferences. Over 97% accuracy proven in laboratory testing.

To use fill capillary tube with filtered specimen. Expel into circle on slide. Add 1 drop reagent. Mix with stirrer. Rock slide gently for 1 min. Observe for agglutination.

Known positive or negative female urine, serum, or plasma can be used as controls.

With DAP·Test reagent, diluent, capillary tubes with rubber bulbs, glass slide, and instructions.

Wampole Tests for "Mono" and Rheumatoid Arthritis

Mono-Diff® Test

Differentiates "Mono" from heterophile antibodies

Simple, rapid slide test for differential detection of infectious mononucleosis, Forssman antibodies, and serum sickness in serum or plasma samples.

Easy-to-read agglutination endpoints. Results read directly from end-points card slides with 3 circular test areas.

Ordering Information: With Mono-Diff® Test reagent, absorbents, positive control serum to ensure accuracy, capillary tubes and bulbs, stirrers, and disposable card slides. Enough reagents and supplies for 20 tests. Reagents stable for 1 yr.

WA25L2Box/17.95

Mono-Test® Kits

Identify infectious "Mono" in one step

One-step, 2-minute slide test for infectious mononucleosis. Kits available for two types of specimen.

Ordering Information: Fresh or Inactivated Serum. For 40 tests. Kit includes: Mono-Test reagent, negative and positive controls, 16 disposable card slides, 1 glass slide, capillary tubes with rubber bulbs, instructions.

WA25D4Box/13.75

Fingertip Blood (FTB). For 10 tests. Kit includes: Mono-Test reagent, hemolyzing solution, negative and positive reading references, 10 lancets, frosted glass slide, clear glass slide, capillary tubes with rubber bulbs, instructions.

Wampole Preagents™

Pre-measured reagents . . . in pre-scored cuvetts for hemoglobin and vital serum tests

Reduce time, increase accuracy and reliability for automated and semi-automated labs. Pre-scored disposable cuvetts contain pre-measured reagents for testing: hemoglobin, BUN, cholesterol, glucose, and total protein.

Easy to use. Snap off top, pipet sample, compare with standard. Other advantages:

Reagents precisely measured. No danger of pipetting too much or too little.

Reagents flame-sealed in cuvetts to assure maximum stability and accuracy. Eliminates contamination, breakdown, or reagent leakage.

No contact with corrosive or toxic chemicals.

Glass optically correct. Cuvetts compatible with Leitz, Coleman, and other photometers with available adapters.

Kits self-contained . . . include reagents,

color standard, control, and pipettor.

Semi-automatic pipettor with disposable tips included for 100 lambda sample tests.

Appropriate chemically prepared color standards are provided.

All Preagents satisfy standards for accuracy and precision proposed by Barnett in *American Journal of Clinical Pathology* 43:562 (1965). 25 Preagents supplied in each kit.

WA89M2

Wampole Bacturcult® Tubes

Collect and culture urine specimens

Diagnostic urine culture tube gives accurate, viable bacterial counts for detecting clinically significant bacterium. Provides presumptive bacterial identification of causative organisms (*E. coli*, *Enterococcus*, *Klebsiella*, *Staphylococcus*, *Streptococcus*, *Proteus* and *Pseudomonas*) by color change of media.

Inner surface of sterile, disposable plastic tube is coated with special nutrient indicator-culture medium. To use: collect midstream

urine sample directly into tube, or fill tube with urine collected in sterile container. Drain. Replace screw cap. Incubate tube for 18 to 24 hours at 35° to 40°C.

Bacturcult eliminates use of other containers and possibility of contamination. Easy to use. Compact; disposable. Gives results in 24 hr.

100	WA55D5	50.00

WA55D1

Wampole Trans-Cul™ System

For collecting and transporting microbiological samples

Disposable, mailable system for culture sample collection and transport of microbiological specimens to a laboratory for culturing and identification.

A plastic pouch which holds sterile medium becomes transport container. Transport compartment, double-sealed to keep inoculated swab surrounded by residual medium to assure recovery of organisms and to guard against external contamination

To use, peel open plastic pouch. Withdraw swab and take sample. Push swab into transport medium and break off top part of swab. Reseal with tape label provided. Forward to laboratory.

Ordering Information: Contains flexible, unbreakable pouch with two compartments. One compartment holds 1 sterile, polyester-tipped plastic swab; the other, 0.8ml Modified Stuart Transport Medium. Tape label provided.

Wampole Serological Reagents

Streptozyme® Slide Test Kit

Detects 5 strep antibodies

Rapidly detects as many as 5 related streptococcal enzyme antibodies (ASO, AH, ASK, ADNase, ANADase) in serum or blood.

Dilute specimen. Fill capillary; dispense on slide. Add 1 drop reagent, mix; rock slide gently. Observe agglutination in 2 min.

Valuable for detecting rheumatic fever and

acute glomerulonephritis. Unaffected by non-specific enzyme inhibitors. When refrigerated, remains stable for over a year.

Kit with reagents, positive and negative controls, glass slide, and capillary tubes.

No. of Tests	Cat. No.	Box

ASLO Test Kit

Antistreptolysin-O titration procedure

Serological reagent kit provides accurate antistreptolysin-O titers for use in diagnosis or confirmation of streptococcal infections, especially rheumatic fever and glomerulonephritis.

Ordering Information: Contains reagents for 10 titrations: 5 buffer tablets to simplify preparations of buffer solution; lyophilized antistreptolysin-O standard to ensure accuracy and reliability; and lyophilized streptolysin-O reagent. When refrigerated, reagents stable for 1 yr.

WA45HO14.50

WA45HO

Streptonase-B® Tube Test

Detects streptococcal pyoderma/glomerulonephritis

For determination of antideoxyribonuclease-B (ADNase-B) titers. Used in conjunction with ASO tests, provides broader detection of streptococcal disease.

ADNase-B superior to ASO as an indicator of streptococcal pyoderma with glomerulonephritis. About 90% of pyoderma/acute glomerulonephritis patients show elevated ADNase-B, compared with only 50% with elevated ASO. ADNase-B is comparable with ASO as an indicator of rheumatic fever and heart disease.

New Streptonase-B detects ADNase-B accurately and conveniently: clear-cut color change provides definitive, easy-to-read end-point. Results can be read in 4 hours (compared with 18 hours for other ADNase-B tests).

WA44D2

Ordering Information: Contains enough Streptonase-B reagents for 10 titrations: 1 bottle enzyme reagent (ADNase-B, freeze-dried); 5 bottles substrate (calf thymus DNA with color indicator, freeze-dried); one 25-ml bottle buffer concentrate (imidazole-calcium

chloride-magnesium sulfate gelatin). Preservative: sodium azide 0.5%; and 1 tube positive control serum (human, freeze-dried; titer is 1:240). When refrigerated, reagents stable for 1 yr.

WA44D220.00

Fisher Digital Melting Point Analyzer

Classical hot-stage melt technique or capillary method

Can perform both cover plate and capillary melting point determinations from ambient to 300°C using the simple, reliable hot-stage melt principle. For most organic melting-point analyses — pharmaceuticals, organic synthesis, and polymers.

For cover plate determination, sandwich small quantity of pulverized sample between 2 microscope cover glasses and place in shallow well on top of aluminum heating stage. Well accepts standard 18mm dia cover glasses; edge of well is recessed so it's easy to insert and remove glasses. Capillary Melting Point Accessory, optional. (See p 757.)

Pushbutton-controlled sample heating

Set max temperature desired on control dial calibrated in 12½° increments from 25° to 300°C. Linear temperature programmer controls heating of hot stage through replaceable 100w cartridge. Reproducibility is ±0.2°C.

Three temperature controls: one for fast heat-up (25°/min); two for low-rate heating (2° and 0.5°/min). Low rates produce a gradual approach to melting point temperature.

Reset button returns temperature programmer to ambient condition. Permits heating block to cool for next analysis. (Can be hastened with auxiliary fan.)

Direct digital readout of sample temperature

Solid-state digital thermometer with LED digital display provides clear reading of sample temperature in 4 digits to nearest 0.001°C. Eliminates thermometers.

Unique lock and hold feature lets you hold temperature reading at any point of interest in

melting process. Also lets you quickly determine melting range. When sample begins to melt, press HOLD button, record temperature reading, then release. As soon as sample stops melting, press HOLD button again and record. These two temperature readings give you exact melting range of sample.

Full sample visibility

Magnifier viewer lets you observe every aspect of sample melting — coloration patterns, softening, melt configuration, degradation, sublimation — in easy-to-see 4X enlarged detail. Lens has adjustable focus for clarity and sharpness. Beam of light from built-in miniature spotlight concentrates on sample for greater visibility, less eyestrain.

Use as micro hot plate

Unit can also be used as a micro hot plate. Surface temperatures produced are accurate and reproducible. Heating stage holds beakers as large as 50ml when magnifier is flipped out of the way.

Ordering Information: With 1 box round micro cover glasses, 18dia x 0.25mm thick. Bench model: 33Lx30Wx15cmH. Finished in grey and black acrylic enamel. Net wt, 6.8kg.

For 120V 50/60Hz, 125w.

12-143850.00

For 240V 50Hz, 125w.

Micro Cover Glasses

FISHERbrand®. As supplied with Fisher Melting Point Analyzer. Non-corrosive. Round, 18dia x 0.19-0.25mm thick. 1 oz (28g) box.

12-546Oz/10.00

Case of 10 oz (283g)/90.00

Fisher-Johns Melting Point Apparatus

12-144

Determines melting points of crystalline substances within $\pm 0.5^\circ\text{C}$

Insert sample between two micro cover glasses and place on aluminum heating stage. Or use optional Capillary Melting Point Accessory (at right).

Unit is heated with a replaceable 100w heating cartridge. Excellent temperature control and reproducibility achieved with variable transformer graduated in percent power.

Handles materials with melting points from 20° to 300°C .

Observe melting through convenient, adjustable magnifier. Integral lens focuses a light beam on the stage to aid observation. When melting point is reached (small drops of liquid appear on cover glass), read temperature on mercury thermometer (graduated in 1°C increments).

Unit doubles as a micro hotplate. Handles evaporations and small preparations of organic compounds. Base has recess for extra beakers.

Ordering Information: With 12-142T thermometer graduated from 20° to 300°C ; thermometer guard; $\frac{1}{2}\text{g}$ silver wool; $\frac{1}{2}\text{oz}$ (14.2g) 18mm cover glasses (12-546) and instructions. Size 23Lx36cmW.

For 115V 50/60Hz.

12-144350.00

For 230V 50/60Hz.

12-144-1350.00

Replacement thermometer for 12-144 and 12-144-1. Graduated from 20° to 300°C in 1° increments.

12-142T11.50

High Accuracy Thermometer Kit for 12-144 and 12-144-1. Two thermometers span the 20° to 300°C range. One covers 20° to 160°C with 0.5° graduations, readable to 0.25°C . Other covers 150° to 300°C with 1° graduations readable to 0.5°C .

12-144-1541.50

Capillary Melting Point Accessory

Converts Model 355 or Fisher-Johns Apparatus

Adapts either of these instruments from the classical hot-stage melt technique to the capillary method. Accessory has the same operating specifications as the instrument used. Especially desirable for substances that sublime. Uses no messy oil baths.

Consists of copper disc which holds 3 capillary tubes, permitting simultaneous observation of 3 samples. Copper's high thermal conductivity and accessory design ensure uniform temperature distribution throughout samples. Copper color provides sharp contrast with most samples for easy direct visual sample observation.

To use, place samples in disposable capillary tubes. Slip tubes into slots in disc. Place disc on heating stage and proceed as you normally would for making a melting point determination.

Ordering Information: Copper disc with 100 disposable capillary tubes and instruction manual.

12-143-235.00

12-144-15

Electrothermal Melting Point Apparatus

Determines melting points of crystalline materials in 20° to 360°C range

Vertical capillary method. Accommodates 3 samples at one time. Heats from ambient to 360°C in 6½ minutes, cools from 360° to 150°C in 6½ minutes.

Place sample in capillary tube (any 1.5 to 2mm OD tube). Mount in heating block hole. Enclose tube with borosilicate glass sleeve to eliminate air currents. Apply heat with coarse adjustment knob. Make small changes with fine adjustment knob. Result is instant, precise control especially near the melting point.

A special heater booster button allows you to bring sample heat up quickly. Button overrides coarse and fine controls when used . . . returns control to them when not in use.

Observe melting points through illuminated magnifier. Maximum clarity with minimum reflected glare.

Melting point temperature easily read on mercury-filled thermometer in center hole of heating block. You observe thermometer and sample at same time. Thermometer accuracy is $\pm 1^\circ\text{C}$ over entire 20° to 360°C range. Fits tightly into heating block for accurate heat measurement. Specially treated glass prevents "zero" migration. Thermometer bulb provides high-contrast observation background for seeing melting points when blackened with the "Aquadag" supplied.

Ordering Information: With 12-145-2 thermometer and 100 thin-walled soda glass capillary tubes closed at both ends (OD in 1.5 to 2.0mm range). 115V 50/60Hz.

12-145.....368.00

Replacement Thermometer for use with 12-145 melting point apparatus.

12-145-227.00

Replacement Heating Unit for 12-145.

12-145-44.85

12-145

Melting Points/Mercury Cleaners

Mercury Purifiers

9-771-5

Decanter

Cleans 11kg mercury in minutes. Filters out dirt, oxide dust, oil, water, acid, and other floating contaminants from distilled or oxidized but not dissolved metals. Operates on decanting principle where mercury-wetted gold seal selectively passes clean mercury while arresting floating impurities.

9-771-5130.00

Replacement gold seal for 9-771-5.

9-771-626.00

3-Column Cleaner

Consists of top column reservoir, 51cm acid column, final filter, receiver, watch glass, and muslin gauze. Dirty mercury is passed through 3 columns: 2 containing muslin gauze and 1 containing 20% nitric acid, where mercury is cleaned and dried. Purified mercury is collected with watch glass having central opening.
9-77138.50

9-771

Equipment to Prepare Specimens for Metallographic And Petrographic Analysis

Metallurgists and petrographers require specialized equipment to prepare specimens for microscopic examination. Preparation involves several successive stages:

- (1) Specimen is cut so as to minimize distortion of internal structure.
- (2) Flat surface for examination is prepared by rough grinding, taking care to avoid excess heating.

Floor Model Abrasive Cutter

Handles stock up to 12.7cm in diameter and 30cm in length

Metal specimens cut with abrasive wheels have smooth surface with minimal change in micro-structure. You prevent over-heating (burning) by controlling specimen feed rate and using coolant solution.

Buehler high-speed floor model cutter has 3hp ball-bearing motor that runs at 1725rpm, makes cut in minimum time. Uses 56.8 liter recirculating system with stainless-steel tank which provides constant flow of coolant on wheel and specimen.

Cutter takes 25 or 31cm dia abrasive wheels. Cutting wheel flange is mounted directly to motor shaft for maximum power transmission.

Ratchet vise holds right side of specimen during cutting. Prevents burrs. Securely holds irregular specimens.

Ordering Information: Sturdy cabinet with waterproof storage compartment. Front mounted control station. Telescoping hood with safety window. Cast metal underwater cutting compartment. Self-contained cooling system with 1/4hp pump motor. 58Lx84Wx145cmH. With assorted cut-off wheels and coolant. For 220V 60Hz. Shipping wt, 431 kg (950 lb).
12-232-252700.00

12-232-25

Surfmet® Belt Surfacers

Makes grinding smoother

Coarse grinding makes flat surface on specimen for subsequent fine grinding and polishing. Each stage removes more of distorted crystal structure, several microns deep, produced by cutting and initial grinding. Most of this is done during rough polishing.

On Buehler Surfmet® surfacer, grinding is done by abrasive belt driven by 1/3hp 115V 60Hz, single-phase motor. Belt tension is kept uniform by spring-loaded idler.

Inlet, valve, and drain connections on back of housing are used to circulate soluble oil or other coolant from outside source.

Ordering Information: Cast-aluminum housing with baked enamel finish is 61Lx41Wx31cmH. Shipping wt, 43 kg (95 lb). With 3 assorted 12-229 grinding belts.

12-234-25595.00

12-234-25

Carbimet Metsplice® Silicon Carbide Grinding Belts

Belts 10cm wide by 91cm long with strong cloth backing. For wet or dry grinding with 12-234-25 surfacer and other belt grinders.

Carbimet® Abrasive Discs

For 30cm disc grinders. Silicone carbide coated paper (12.7mm center). Adhesive back. Grit size, 120.

12-228BPk of 100/110.00

- (3) Specimen is mounted to facilitate handling and to protect its structure during processing. Metals are embedded in plastic. Ceramic and petrographic specimens are cemented to glass slides.
- (4) Surface to be examined is carried through several stages of fine grinding and polishing.

- (5) After polishing, metal surface is etched to bring out crystal structure. Petrographic specimens are usually prepared as thin sections and examined by transmitted and polarized light.
- Fisher stocks selection of metallographic and petrographic equipment manufactured by Buehler Ltd. Other Buehler apparatus is available on special order.

Bench Model
Cut-Off Machine

Cuts specimens up to
2.5cm in diameter

This Buehler cutter uses 12-226 series 23cm cut-off wheels, flange-mounted on motor shaft to reduce vibration. 1½hp motor operates on 230V 60Hz, three-phase. Control handle moves specimen vise and carriage upward, bringing work piece in contact with wheel and controlling feed rate so as to prevent "burning". Dual coolant

jets are inside cutting compartment with splash and spray deflectors to protect user. Coolant inlet, valve, and drain, on back of base, have standard plumbing connections. Removable drawer contains sludge trap, and electrical components are accessible through side panel.

Ordering Information: Apparatus is 76Lx61Wx64cmH. Shipping wt 107 kg (236 lb). With 6 assorted 23cm cut-off wheels.

Medium (Rc 35-50)	12-226E	52.00

Low-Speed Isomet™
Diamond Saw

For low-deformation cutting

Low-speed cutting with diamond wheels causes least deformation of metal micro-structure. Also best method with extra-hard and brittle materials (ceramics, refractories, geological specimens). Should be used with specimens for transmission electron microscopy or analysis with electron microprobe.

Buehler Isomet™ low-speed saw is used with extremely thin (0.15mm and 0.30mm) 12-227 diamond wafering blades. It will hold several blades and spacers for multiple slicing of thin sections. 1/50hp motor is operable at continuously variable speeds up to 300rpm.

Feed specimen with counter-balanced down-feed mechanism, using assorted weights to obtain desired cutting rate. Adjustable stop contacts microswitch to stop saw when cut is completed. You use built-in micrometer to cut thin sections of specified thickness. Use mineral spirits in coolant tray for best results.

Ordering Information: Only 27cm square x 16cmH. Shipping wt 11.3 kg (25 lb). Comes with 12-227B wafering blade and 4 sample chucks, for use on 115V 60Hz, single phase.

10.2	0.30	12-227B	80.00

Specimen Mounting Equipment

After rough grinding, metal and mineral specimens are embedded in cylinders of hard, tough plastic which protect them and facilitate handling during subsequent fine grinding, polishing, and etching. Fragile specimens may have to be em-

bedded by cold mounting process (see p 764). Most metals, ceramics, and geological specimens are mounted by using heat and pressure to melt molding material and force it into contact with specimen. Two kinds of molding materials: ther-

mo-setting materials (Bakelite™ and diallyl phthalate) polymerize under heat and high pressure. Thermo-plastic materials (Transoptic™) melt and solidify under lower pressures. Buehler mounting presses can be used with both kinds of materials.

Black Bakelite™ Premolds

Save time

Buehler premolds are standard weight of Bakelite powder compressed into pellet that exactly fits 2.5 or 3.2cm mold. You preheat pellet almost to melting temperature, drop it in mold, add specimen, and put it in press. Save time weighing out powder and cut mounting time by nearly half. Premolds contain wood-flour filler.

Mold I.D.	Cat. No.	Pk of 500
2.5mm	12-231A	24.00
3.2	12-231B	28.00

Molding Powders

Colored Powders

Powder supports specimen under pressure. Diallyl phthalate has closer bond to sample and shrinks less than Bakelite. Glass-fiber filler makes mount harder, protects edges of specimen during polishing. 2.3kg.

Material	Color	Filler	Cat. No.	Ea
Bakelite	Black	Wood flour	12-234-40A	7.00
Bakelite	Red	Wood flour	12-234-40B	9.00
Bakelite	Green	Wood flour	12-234-40C	9.00
Diallyl Phthalate	Blue	Glass fiber	12-234-41	29.00

Fisher Molding Powders

Pure compounds, without fillers.

Black Bakelite Powder.

Case of 4x2.3kg/30.88

Lucite Powder.
L-1491 lb (454g)/5.75
Case of 6x454g/28.74

Diallyl Phthalate, practical.
5673-P500g/8.05
3kg/30.35

Transoptic™ Powder
Thermoplastic powder that melts at molding temperature and penetrates irregular and fragile specimens. As it cools under light pressure it becomes transparent, so details of structure can be seen clearly.
12-234-42A5 lb (2.3kg)/18.00

Plastimet Mounting Compound

Black thermosetting-filled epoxy for specimen mounting. Produces hard, flat mounts that retain specimen edge. Useful for case-hardened steel samples as well as plated, coated, and composite specimens. Cures in 5 to 9 min at pressures ranging from 105 to 295kg/cm² (1500 to 4200psi) at 150°C. Permits use of compression molding in applications where low pressures are necessary.
12-234-434 lb (1.8kg)/25.00

Pneumet® Mounting Press

Pushbutton-operated

It's easy to embed specimens under reproducible conditions when you use Buehler Pneumet® press. Temperature of heater is thermostatically controlled. Use valve to set molding pressure and 0 to 15 minute timer to control curing time.

Pressure source is 5.6kg/cm³ compressed air from laboratory air line or auxiliary compressor (see pp 986 through 993). This is applied to pneumatic ram, which amplifies it to required mounting pressure (about 295kg/cm² for Bakelite and Transoptic; 175-211kg/cm² with diallyl phthalate). Gauge shows line and molding pressures and ram force.

Interchangeable mold assemblies screw into center mount. Put specimen and premold or molding powder in mold, seal it with screw-in closure, set timer, and push buttons that start heating and compression. When timer signals end of mounting cycle, remove heater, replace it with cooling block, and when mold has cooled use air pressure to eject embedded specimen.

Power and heater lines and pneumatic ram have independent pushbutton switches and pilot lights.

Ordering Information: With samples of Buehler premolds and mold release fluid, pair of gloves, instructions. Without molds. 115V 60Hz, single phase. 36Lx46W x48cmH. Shipping wt, 59kg (130 lb)

Hydraulic Mounting Presses

Produce pressures to 10,000 lb (4536kg)

For laboratories that have only few specimens to mount. Use pump-type hydraulic jack to reach total pressures up to 10,000 lb (4536kg). Both have slip-on thermostated heaters and cooling blocks, and can be used with thermosetting or thermoplastic molding materials.

Simplimet® II Press

Compact press takes 2.5, 3.2, and 3.8cm ID (5.1cm OD) screw-base molds with screw-in closure. Thermostated heater and cooling block slip over mold and closure.

Right- or left-handed pumping operation. Pump handle easily moved to either side. Smooth acting hydraulic pump action requires minimum physical effort.

Gauge in base shows mold pressure. Valve releases pressure quickly and safely.

To make mold, raise ram to top edge of mold wall by turning pressure knob and operating pump handle. Place specimen on ram face and lower ram by releasing pressure. Add powder or premold and replace closure. After applying 1/2 pressure, release and quickly reapply slightly more than fully recommended pressure for mold size used. Wait until end of curing period, eject mold.

Ordering Information: Has built-in hydraulic system, pressure gauge, screw-type closure assembly, 5.1cm ID thermostatically controlled heater, and slip-on cooler. 36Lx28Wx58cmH. With gloves, instructions, samples of mounting resin, and mold release; without molds. Shipping wt, 41kg (90 lb).

QuickMount™ Self-Setting Resin

For cold mounting

If specimens would be damaged by heat or pressure, embed them in QuickMount™. A fast, efficient way to mount metallurgical, geological, and biological specimens.

QuickMount is exothermic acrylic resin. It self-cures at room temperature into hard, translucent mount resistant to acids and etching reagents (except nitric and glacial acetic acids and phenol). Curing time from mix to solid mount is 30 min. You can mount as many specimens at one time as you may require.

QuickMount comes in two parts

— powder and liquid. You mix 2 parts of powder with 1 part of liquid by volume. Stir for 2 minutes. Put specimens in aluminum rings on glass plate, pour in QuickMount, and in 30 min mounts will be ready to grind and polish.

Ingredients are toxic if ingested, but cured mounts are non-allergenic. Liquid is flammable, so observe normal safety precautions and ventilation. Liquid should not be stored more than 3 months, as inhibitor evaporates slowly and liquid becomes unusable thick syrup.

Fast Cure Epoxy Kit

Air cures to full hardness in 30 minutes

Epo-Kwick epoxy mounting system brings efficiency to air-curing sample mounting methods. No need to wait 6 to 8 hours to air cure or minimum of 2 hours to oven cure epoxy mounts. Consists of resin, hardener, release agent, and other supplies.

Epo-Kwick resin has excellent adhesive properties and proper viscosity to fill sample voids and cracks. Exhibits high resistance to mechanical abrasion and chemical attack by etchants and solvents. Eliminates cracking and brittleness.

Kit contains sufficient materials to produce approximately 50 common 3.2cm diameter specimen mounts.

Ordering Information: With 950ml of Epo-Kwick resin, 240ml of Epo-Kwick hardener, 60ml of release agent, 12 sample cups, 150ml paper cups, stirring sticks, and instructions.

12-253-6029.50

12-253-60

Specimen Support Springs

12-235-116

Hold samples erect during mounting

Sampl-Klip specially treated stainless-steel coils. Easily support thin sheet samples exactly perpendicular to mount surface to permit accurate measurement of case-hardening depths, coating thickness, or reaction layers. Useful for holding small fasteners, wires, discs, printed circuit board sections, substrates, and nearly all small samples which have unstable configurations.

Eliminates glues, tapes, paper clips, alligator clips, and other make-shift holding devices. Not necessary to grind through layers of tape to reach sample surface.

Support springs are inert to thermosetting, thermoplastic, and room temperature setting epoxide, polyester, or acrylic mounting materials. Not reactive with most commonly used etchants and will not interfere with etching of most materials. Use individually or in pairs.

12-235-116.....Pk of 100/11.00

Desiccator Cabinet

Protects specimens from scratches and corrosion

Save time preparing specimens for microscopic examination. Highly polished and etched surface is easily scratched, nicked, or corroded by fumes or moisture in air.

Steel cabinet holds up to 600 specimens in 2.5 or 3.2cm mounts in drawers with individual latches. Drawer liners protect exposed surfaces. Plastic tray in base holds Drierite, calcium chloride, or other desiccant. Perforated inner walls assure good circulation.

Ordering Information: 46Lx42Wx50cmH. Shipping wt, 48kg (106 lb). Order spacers

separately to fit mounts you are storing.

12-235-150200.00

Buehler Handimet® II Roll Grinder

Incorporates 4 grinding
papers on rolls

Four grades of abrasive paper are mounted side by side in covered compartment behind grinding stations. Paper is in 30.5m rolls, quickly changed when abrasive is exhausted. Grinding surface is continually lubricated and cooled by jets of water that flush away metal and abrasive particles.

Paper is stretched over 8.9x30cm grinding platform cushioned with resilient polyvinyl chloride and held by clamp with lock-knob. When you need fresh abrasive, loosen knob, pull out used paper, and tear it off. Grinding platform will be covered with fresh abrasive.

Front control valve regulates volume of flushing water. Inlet and drain have standard plumbing connections.

Ordering Information: 57Lx48Wx18cmH. With one roll each of 12-236-49A, B, C, and D silicon carbide paper.
12-236-49295.00

Carbimet® Paper Rolls. For 12-236-49 grinder. Paper rolls are 30.5mLx8.9cmW coated with indicated grit size of silicon carbide abrasive.

Handimet® I Strip Grinder

Uses four 7.6x28cm
abrasive strips

If speed isn't essential, Buehler Handimet I Strip Grinder gives you most advantages of Handimet II Roll Grinder, and costs about half as much per square inch of grinding area. Abrasive strips also cost less than rolls, per 100 changes.

With Handimet I, abrasive is on 7.6x28cm adhesive-back paper strips. Four side-by-side grinding platforms perform successive stages of fine grinding. Platforms are coated with resilient polyvinyl chloride and are flushed with water to provide lubrication and remove grinding debris, just as in higher-priced roll grinder. (Inlet, valve, and drain are also same.)

Ordering Information: 48Lx47Wx11cmH. Shipping wt, 13.2kg (29 lb). With 10 each of 240, 320, 400, and 600-grit paper strips, instructions.
12-236-50195.00

Hand Sheet Grinder

With single large
grinding area

Four Buehler sheet grinders cost you less than one Handimet II. Set them side by side, and you have four-stage fine-grinding setup with more than three times as much work area (3200cm²) as roll grinder (994cm²).

This bargain-priced hand grinder has flat, thick, matte-surface plate-glass grinding platform. Use 23x35cm abrasive paper sheets, held by rubber-cushioned metal strap with lock knobs at both ends. No flushing system for wet grinding, but you can improvise one.

Ordering Information: 43Lx28Wx7.6cmH. Ideal for ceramics and geological specimens. With 12 sheets each of 12-236-68B, C, D, and E emery paper. Shipping wt, 7.3kg (16 lb).

Polishers

Buehler Ecomet® Polishers

125 or 250 rpm models

Buehler Ecomet® polisher is unit you can use anywhere you can make water, drain, and power connections. It is rugged heavy-gauge steel with enamel finish. Integral faucet, cast-iron bowl, and drain enable you to flush wheel to prevent overheating and carry away polishing debris. Removable plastic splash ring and cover protect bench and specimens from grit and dust. Water and drain connections are standard.

Plain 20cm bronze wheel is

geared directly to 1/4hp, 115V 60Hz motor. Has clamp for polishing cloth and band to hold paper discs.

With 12-259-22 bronze 20cm wheel, samples of 12-236-23 Carbimet® paper and polishing cloth, and instructions. 57Lx 41Wx36cmH. Shipping wt, 42kg (92 lb).

Buehler Low-Speed Polisher

Speed Selector: 155 or 233rpm

Buehler low-speed polisher for laboratories with large numbers of specimens to prepare. You build it into your work bench, with polishing wheel at bench level and permanent connections to water and drain.

Save time by using row of polishers, each set up for different stage of rough or final polishing. Take specimens from wheel to wheel until preparation is completed. Plastic splash ring and cover with each polisher prevent coarser abrasives from contaminating fine-polishing stages.

Balanced bronze wheel fits over tapered spindle on counter-shaft of heavy-duty two-speed 1/4 hp motor. Design minimizes vibration, compensates for wear, makes it easy

to interchange wheels with different polishing cloths and abrasive charges. (Same 12-259-22 wheel as supplied with 12-237-95 and 12-237-96 Ecomet polishers and most other Buehler polishing wheels.)

Two-way switch provides wheel speeds of 155 and 233rpm. Motor has high torque for Automet® and Whirlimet® automatic attachments. Cast metal bowl has drain.

Ordering Information: With wheel, samples of 12-236-23 Carbimet paper and polishing cloth, and instructions. Motor operates on 115V 60Hz. 31Lx41Wx33cmH. Shipping wt, 50kg (110 lb)

Vibromet Polishing Apparatus

For highest-quality final polish

Unique vibratory action of Buehler Vibromet® guarantees highest-quality final polish, produced automatically, on up to 8 specimens with 20cm polishing cloth.

Clamp polishing cloth on removable platen and charge it with appropriate abrasive. Platen vibrates in small circle at adjustable frequency. Mounted specimens, in weighted holders are set on abrasive-covered surface.

Each specimen rotates around its own axis and slowly travels around vibrating platen. Combination of motions eliminates directional abrasion and gives you flat, high-quality polished surface without damage to edges. Remove any specimen and replace it with others without stopping machine or disassembling holder.

Vibrating platen has bayonet mount for easy removal. Vibrator is attached to cast-iron bowl with rubber cushions, so vibration is not transmitted to bench. Base has resilient baked vinyl finish, resistant to abrasion.

Ordering Information: 38Lx33Wx33cmH. With specimen loading gauge, speed control, plastic cover, samples of polishing cloth, and instructions. 115V 60Hz. Without holders, must be ordered separately. Requires set of 8. Shipping wt, 30kg (65 lb).

12-259-1425.00

Specimen Holders

Other sizes and extra platens are available on special order. Mount size, 3.2cm. Set of 8 holders.

Selected Silk

Discs of steam-processed pure Japanese silk with lineal count of 125 threads/inch. Recommended for slurry or skid polishing, and for rough polishing of very friable materials with alumina. Plain back. Size, 20x0cm. Without center hole.
12-289-65Pk of 10/16.00

Nylon

Napless cloth, 70 denier, 190x120 count, 4-shaft satin weave, used for rough polishing with Metadi to prevent formation of relief. Has very long useful life. Plain back. Size, 20x0cm. Without center hole.
12-289-54APk of 10/9.00

Silk Sheets

Superior Type 12XX Swiss silk bolting cloth, recommended by Long and Gray for preliminary stages of vibratory polishing. Sheets are 36cm square. To use on Vibromet and Automet, it is necessary to cut 6.4cm center hole. Plain back.

12-283Ea 6.50
Pk of 12 58.80

Texmet®

Synthetic textile with water- and oil-resistant pressure-sensitive adhesive backing. Used in both metallography and mineralogy.

Size	Cat. No.	Pk of 10
20x0cm	12-289-66A	9.00
20x6.4	12-289-66B	9.00

Recommended Polishing Cloth Chart

Second figure in dimensions of cloth discs is diameter of center hole, if one exists. That is, 20x0cm discs have no center hole; 20x6.4cm discs have 6.4cm dia hole to fit Vibromet® and Automet® polishers.

Polishing Abrasives

A-446

Fisher Gamal® Polishing Alumina

Laboratory-formulated, concentrated suspension of high-purity gamma alumina, average size 0.05μm for final polishing of hard and soft ferrous and non-ferrous metals. Buffered at pH 7. Dilute 1:30 to 1:50 with distilled water to

obtain desired consistency. In screw-cap polyethylene bottles.

A-446.....4fl oz (118ml)/15.89
Case of 6x4fl oz/79.44
Pt (473ml)/60.78
Case of 6x1pt/303.90

Fisher Grade A-301 Polishing Alumina

Laboratory-formulated, concentrated suspension of alpha alumina, for rapid fine grinding and rough polishing of steel, cast-iron, and other hard metals. Particles are 95% smaller than 325 mesh (44μm). Fine grinding can stop

with 400 grit. Does not encase scratches. Dilute 1:50 with distilled water to obtain proper consistency. Screw-cap bottles.

A-543.....Pt (473ml)/28.58
Case of 6x1pt/142.92

Fisher Grade A Polishing Alumina

Laboratory-formulated, concentrated suspension of alpha alumina, average size 0.3μm, for medium hard and soft metals. Slower than A-543. Dilute 1:100 with distilled water to obtain proper

consistency. Screw-cap bottles.

A-544.....4fl oz (118ml) 12.68
Case of 6x4fl oz 63.42

(Contd. next page.)

Polishing and Abrasives, Contd.

Buehler Polishing Alumina

Ready-to-use suspensions of indicated type and particle size, in 6 oz (177ml) polyethylene dispenser bottles. Use directly or dilute to desired consistency. If used to polish easily corroded metals, extend with 12-243 lapping oil instead of water.

No.	Type	Size	Cat. No.	Ea
1	Alpha	5.0µm	12-241-5A	6.00
2	Alpha	0.3	12-241-5B	7.00
3	Gamma	0.05	12-241-5C	7.00

Lapping Oil

Automet® lapping oil is used as extender for Metadi® and Buehler polishing alumina pastes. Dissolves carrier and disperses abrasive over entire polishing cloth. 6 fl oz (177ml).
12-2432.00

Alumina Powder

Fisher Type A. Alpha alumina with 0.3µm average particle diameter. Use dry or make suspension. Rough and final polishing.
A-4471 lb (454g)/54.44
Case of 6x1 lb/272.16
Fisher Type B. Gamma alumina, 0.05µm average dia. Final polishing.
A-4481 lb (454g)/58.15
Case of 6x1 lb/279.00

Metadi® Diamond Compound

Metadi is specially prepared Buehler compound for grinding and polishing metallographic and petrographic specimens of all kinds. Diamond is hardest known material, and its octahedral form furnishes many abrasive points. Meticulous grading of diamond particles prevents scratching and assures efficient polishing action.
Diamond particles are suspended in carriers of different consistencies. Each grade is color-coded for quick identification, to prevent mixing abrasive particles of different sizes. In specially designed plunger dispenser.

Size	Consistency	Color Code	Cat. No.	5g/Ea	18g/Ea
1/4µm	Medium	Gray	12-242F	-----	63.00
1	Medium	Blue	12-242B	11.00	-----
			12-242G	-----	40.00

9	Heavy	Red	12-242E	42.00	-----

Buehler Micropolish

Selected Linde alumina, packaged in jars under clean-room conditions, to exclude dust particles.
Micropolish A. Alpha alumina, 0.3µm dia. Rough polishing.
12-241B8 oz (237ml)/16.00
12-241E.....16 oz (473ml)/27.50

Micropolish B. Gamma alumina, 0.05µm dia. Final polishing.
12-241A8 oz (237ml)/16.00
12-241D16 oz (473ml)/27.50
Micropolish C. Alpha alumina, 1.0µm dia. Rough and final polishing.
12-241C8 oz (237ml)/16.00
12-241F.....16 oz (473ml)/27.50

Recommended Polishing Abrasive Chart

Alumina (aluminum-oxide) exists in two forms with different abrasive properties.
Alpha alumina (Linde A & C; Micropolish A & C) has hexagonal crystal structure. It is very hard (9 on Moh scale) and fast-cutting. Coarser grades are used for fine grinding and rough polishing, and finer grades for final polishing.
Gamma alumina (Linde B; Fisher Gamal®; Micropolish B) has cubic crystals. It is softer (Moh 8) and slower-cutting, and is used primarily for final polishing.
Both types are available as powders with closely controlled particle size, and as slurries. These are diluted ("extended") with dis-

tilled water to obtain desired consistency for specific application. When alumina is used to polish easily corroded metals, 12-243 Buehler lapping oil should be used as extender.

Abrasive	Size	Application*		
		G	R	F
Alumina				
A-301	44µm	X	(X)	
Linde C	1.0		X	
Linde A	0.3		X	X
Linde B	0.05			X
Gamal®				X
Carborundum	30-85	X		
Diamond	1/4-9	(X)	X	X
(Metadi®)				
Jeweler's Rouge	3.0			X

*G = Fine grinding F = Final polishing
R = Rough polishing () = Some materials only

Other Materials

Fisher Chemical Division makes high-purity and technical grades of several compounds often used in final polishing of metallographic and petrographic specimens. These are generally free of abrasive impurities, but do not have uniform particle size for polishing. Use them by screening to obtain correct grit size.
Check your *Fisher Chemical Index* (p 1248) for following compounds:
C-257 Cerium Oxide, purified
C-333 Chromic Oxide
I-115 Iron Oxide (Jeweler's Rouge)
M-50 Magnesium Oxide
T-148 Tin Oxide

Abrasive Discs and Sheets

For other Buehler grinders and polishers

We stock these abrasive discs for older model Buehler Standard and low-speed fine grinders, and for horizontal grinders. Discs are 20cm in diameter with a 1.3cm center hole for mounting.

Carbimet® (Silicon Carbide) Discs (20x1.3cm) with 1.3cm center hole

Ultramet® Sonic Cleaners

12-259-30

Remove abrasive grains from metallographic and petrographic specimens

If one grain of coarse abrasive is carried over from one stage of grinding or polishing to next, it will probably scratch surface and make you do work over.

Make a practice of giving specimens thorough ultrasonic cleaning after every step in grinding and polishing. Microscopic bubbles form and collapse as high-frequency sound waves travel through bath, loosening any abrasive particles that may cling to surface, and literally exploding them out of crevices. After etching, it removes last traces of salts and acids, plus loosened metal or mineral grains.

Buehler makes three sonic cleaners designed especially for metallographic and petrographic cleaning. They have stainless-steel tanks of different sizes, and different frequencies and power ratings.

Ordering Information

Ultramet I. 13Lx14Wx10cmD stainless-steel tank with drain. High-frequency transducers (82kHz) are bonded to tank bottom

for efficient power transfer. Extra output connector with selector switch can be used to operate separate tank (available on special order) from same ultrasonic power source. Complete unit, 36Lx23Wx25cmH. 115V 60Hz (50w max). Shipping wt, 13.6kg (30 lb).
12-238-30310.00

Ultramet II. Larger, higher-power, lower-frequency all solid-state model is designed for long continuous operation. Ultrasonic source has 55kHz frequency and uses 100w max on 115V 60Hz. Stainless-steel tank, 13Lx23Wx10cmD. Complete unit, 19Lx31Wx23cmH. Shipping wt, 5.4kg (12 lb).
12-259-30160.00

Ultramet III. Same all solid-state electronics and 55kHz (115V 60Hz) ultrasonic source as Ultramet II, but with smaller tank (13Lx13Wx7.6cmD) and power consumption (50w max). Complete unit, 18sqx15cmH. Shipping wt, 2.7kg (6 lb).
12-259-31120.00

See p 1218 for other ultrasonic cleaners and accessories. Insert trays and beaker holders for Ultramet II and III cleaners are available on special order

Microbiology Supplies.

See Med-Lab Section on pp 614 to 644

Microscope Index

Microscopes from American Optical (AO) and Bausch & Lomb (B&L) are listed here under individual sections according to

microscope type. Optical components and other accessories are presented with their respective microscope model. Mis-

cellaneous accessories are grouped under last section to assist you in locating these specific products.

Bausch & Lomb Balplan™ Microscopes

Set standards in modular microscopy

You design your Balplan™ Microscope yourself. You select components with optical and physical characteristics you need from six categories shown in "Model Maker" charts (pp 778-779 for biological models; pp 780-781 for phase contrast microscopes). You can have basic, low-priced instrument, or one capable of any kind of modern microscopy.

Features which are expensive extras in other lines are standard in Balplan microscopes. All components are coordinated to make high-precision optical/mechanical system. There are hundreds of thousands of possible combinations.

Planachromatic Objectives

Planachromatic objective lenses are standard in all Balplan microscopes. They are made to computer-developed lens formulas, using glasses and fluorite elements. All air-to-glass surfaces are treated with anti-reflection coating that increases light transmission, minimizes reflection, and eliminates glare. Flatness of field of view surpasses anything previously available. Contrast, resolution, and color correction also set new high standards.

All Balplan objectives are parfocal, so you don't have to focus again when you change magnification. They are infinity-corrected and parcentered, so you don't lose your field of view when you change lenses. Nosepieces are precentered, with precision ball-detent indexing. You order nosepiece and objective together, as one module, designated by two-letter code in Model Maker charts.

Wide-Field Eyepieces

Balplan microscopes are furnished with 10X or 15X wide-field eyepieces. You use same eyepieces with all objectives.

With 10X eyepieces your field of view is 20mm in diameter — 17% larger than conventional microscopes. Image is sharp and flat from edge to edge — you don't have to keep refocusing to see it all.

Interchangeable Heads

You have choice of four dustproof heads, used singly or together in dual-viewing arrangement. These have non-polarizing prism-and-mirror beam-divider system that enables you to use polarizing accessories with full binocular vision, and to switch instantly from visual examination to camera.

Binocular heads are available in two models, with eyepiece tubes inclined at 30° or 45° (for people who "sit tall"). Triocular head has 30° binocular eyetubes, plus vertical tube on which you mount camera for photomicrography. (If you use Balplan integrated cameras, you replace this with focusing tube.)

Monocular head is used for classroom work or for labs where it will not be used often enough for eye fatigue to be problem.

You use patented interpupillary distance wheel, calibrated in millimeters, to adjust and reproduce space between eyepieces for different users. Left eyepiece can be focused separately to compensate for differences between eyes.

Entire head can be rotated through 360°, so you can work with stage close to you or away from you.

Four special head styles ("D," "A," "C," and "S" in Model Makers) give you microscope with two heads, mounted opposite each other. This is especially useful when you train technologists in microscopy, or when two people need to see and confer on same specimen. Built-in illuminated pointer enables you to point out details of structure.

No Vibration

All Balplan microscopes have patented vibrationless "C" shaped stand.

Nosepiece and objectives are supported by separately suspended inner arms. Inevitable vibration when you focus or move specimen can't be transmitted to image.

Heads, stage, camera and other accessories are mounted on separate outer arm. Dual focusing knob can be on either side of stand. Coarse adjustment has clutch to prevent you from damaging objective or specimen. One revolution of fine adjustment knob raises or lowers stage 100μm; it is graduated in 1μm divisions. Contoured hand-rest is under focusing knob for added comfort.

Nosepiece can be reversed if you find it more convenient. (Quintuple nosepieces require adapter.)

Balplan™ Biological Microscope Components

Choice of Stages

You order microscope stand and stage together, as one module, designated by two-letter code in Model Maker charts.

You have choice of six interchangeable stages. Graduated and ungraduated mechanical stages have rack-and-pinion adjustments on left or right. Plain stage and 15cm dia glide stage with 2.5cm slide movement are also available.

All these stages have patented spring-mounted slide holders that allow full scan of slide with little or no refocusing. Stages are on ball-bearing slideway that makes focusing smooth and easy.

Substage Condensers

Which condenser you specify will depend on how you intend to use your microscope — for bright-field, dark-field, or phase contrast work — and what illuminator you will use.

Balplan condensers have slots for standard 33mm filters or dark-field stops. Flip-in auxiliary lens allows you to fill field of 4X objective. Flip-out hemispheric condenser allows you to fill field. These are phase contrast condensers for long, medium and short working distances.

In-Base Illuminators

You can order Balplan microscopes with conventional plano-concave mirror and external illuminator. However, they are designed with in-base illuminator as part of integrated optical system.

All illuminators and transformers fit into base of Balplan stand. They remain perfectly and permanently aligned with whatever condenser and objectives you use.

Integrated Cameras

Bausch & Lomb has developed new series of interchangeable cameras as integrated component of Balplan microscope system.

Non-focusing adapter tube on Balplan triocular heads can be used with any microscope camera. When you use Balplan cameras, you replace it with focusing tube assembly supplied with each camera. This incorporates camera fitting, distortion-free amplifier lens, and shock-mounted shutter with cable release.

Camera is integrated with microscope optical system, so that when you focus on specimen through eyepieces you have also focused on film. Lever in triocular head operates internal image splitter that directs all light to eyepieces while you focus and select field to be photographed — then switches 100% of light to camera.

Nosepieces are described on p 784. Bright-field objectives are described on p 785 and phase contrast objectives on p 785.

Phase Condensers

Component S.....	408.00
Component B.....	291.00
Component T.....	521.00
Component F.....	404.00
Component J.....	541.00
Component C.....	432.00

Add \$20.00 for each annuli ordered for use with "S" or "B" condenser. Phase condensers and accessories are described on p 785.

Eyepieces (Pair)

Component Set 1.....	78.00
Component Set 2.....	100.00
Component Set 3.....	121.00

You will need two sets of eyepieces for microscopes with style "D" or "A" dual heads.

Illuminators

Component M.....	38.00
Component P.....	92.00
Component H.....	215.00

Model Maker for Balplan™ Biological Microscopes

How To Use:

BL BRB2 M1H

Every Balplan™ microscope is made up of six sets of interchangeable components. Each different set of components is designated by code letter or number.

Each Balplan model is identified by seven-digit code number that specifies its optical and physical characteristics. You use "Model Maker" chart on this and opposite page to obtain model numbers for Balplan bright-field biological microscopes. Chart on two following pages gives code for phase contrast models.

To obtain code designation of specific Balplan model you want, use this chart to pick out stage, head, nosepiece and objectives, substage condenser, eyepieces, and illuminator to suit your specific requirements. Write down, in same order as in chart, code letters and numbers of components you select. (If you do not need some component, such as illuminator, put "X" in that column.)

For example, Model BRT7N1H microscope, illustrated above, is made up of following components:

BR	stand and stage
T	trinocular head
7	quintuple nosepiece with 5 planachromatic objective lenses
N	4-element aplanatic sub-stage condenser
1	pair of 10X wide-field eyepieces with eyeguards
H	Hi-Intensity in-base illuminator with transformer and filters

Once you have code designation for model you want, you can obtain its price by adding together prices of all coded component sets used to make it up. If you want other components or accessories (lenses; camera; polarizers; case; etc), you will find descriptions and prices on pp 784-787

10% Discount

Prices of Balplan microscopes and components apply to orders for 1 to 4 items. You receive 10% off on orders for 5 or more items of same kind.

Phase contrast microscopes for these and other applications are recommended in Phase Contrast Model Maker, on next two pages.

²You will need two pairs of eyepieces when you order model with "D," "A," "C," or "S" dual heads. Allow for second pair in estimating price.

Bausch & Lomb Huygenian eyepieces can also be used in Balplan microscopes

Model Maker for Balplan™ Phase Contrast Microscopes

In these microscopes, visible contrast between different parts of specimen is produced by interference of light waves. They can be used to examine living cells without prior staining or other damaging preparation. Recommended for hematology and for particle identification in air pollution investigations.

Phase contrast microscopes have condensers with interchangeable ring-shaped diaphragms (annuli), and objective lenses containing phase plate that causes light passing through different parts of transparent specimen to reinforce or cancel out, producing bright and dark areas in image.

Phase Contrast Model Maker

You use Model Maker chart for phase contrast microscopes, on these two pages, in same way as chart for Balplan™ biological models, on preceding two pages.

You make up code designation for phase contrast microscopes only from components in this chart. Although some components (heads, eyepieces, illuminators) can be used interchangeably in both Balplan series, others cannot. Nosepieces contain special phase objectives, condensers have phase design and "C" series bases have fittings for these phase components.

Recommended Balplan™ Microscopes

Microscopes described and illustrated on next three pages are recommended by Bausch & Lomb for pathology, hematology, bacteriology, advanced microbiology, research, and educational use. Several of these models are also recommended for general laboratories.

Fisher can supply these recommended Balplan™ models from stock. If none of them meets your exact requirements, use Model Maker charts and accessory list on pp 784-787 to substitute or add components that will give you what you need.

BRT7N1H

BRA7N1H

CRBKT1H

BRB2M1P

For Pathology

Triocular Models

Fisher stocks three Balplan microscopes with triocular head you need to photograph pathological specimens. If you have satisfactory camera, you can mount it on non-focusing tube supplied with head. If not, you can use any of Balplan cameras on p 787.

Model BRT7N1H. This model has following components:

"C"-shaped stand with right-hand un-graduated mechanical stage and rack-and-pinion substage.

Triocular head with non-focusing camera tube.

Quintuple nosepiece with 2.5X, 10X, 20X, 40X, and 100X (oil immersion) planachromatic objective lenses.

4-element aplanatic condenser with flip-out hemispheric lens and iris diaphragm.

Pair of 10X wide-field eyepieces with eyeguards.

Hi-Intensity in-base illuminator with 4-step pushbutton transformer for 115V 50/60Hz; field iris diaphragm for Koehler illumination; flip-in 10% neutral density filter; filter holder with daylight blue filter; and removable 3-wire line cord with switch.

BL BRT7N1H1966.00

Model BRT5N1H. Identical with Model BRT7N1H, except that five objective lenses are 2.5X, 4X, 10X, 40X, and 100X (oil immersion).

BL BRT5N1H1931.00

Model BRT3Z1H. Like other two triocular models, except that it has only four planachromatic objective lenses (4X, 10X, 40X, and 100X), and substage condenser is 3-element aplanatic model with flip-in auxiliary lens for use with low-power objective.

BL BRT3Z1H1799.00

Dual Heads

These microscopes are ideal for diagnostic and forensic consultations, and as aid in training personnel to recognize and identify pathological conditions. Triocular models give you capability for photography

Model BRD7N1H. Has following components:

"C"-shaped stand with right-hand un-graduated mechanical stage and rack-and-pinion substage.

Dual viewing adapter with 30° and 45° binocular heads.

Quintuple nosepiece with 2.5X, 10X, 20X, 40X, and 100X (oil immersion) planachromatic objectives.

4-element aplanatic condenser with flip-out hemispheric lens and iris diaphragm.

Two pairs of 10X wide-field eyepieces with eyeguards.

Hi-Intensity in-base illuminator with 4-step pushbutton transformer for 115V 50/60Hz; field iris diaphragm for Koehler illumination; flip-in 10% neutral density filter; filter holder with daylight blue filter; and removable 3-wire line cord with switch.

BL BRD7N1H2786.00

Model BRD5N1H. Identical with Model BRD7N1H, except that objective lenses are 2.5X, 4X, 10X, 40X, and 100X (oil immersion).

BL BRD5N1H2751.00

Model BRA7N1H. Like Model BRD7N1H, but has dual viewing adapter with 30° triocular and 45° binocular heads and non-focusing camera tube. Use it to train personnel.

BL BRA7N1H2863.00

Model BRA5N1H. Identical with Model BRA7N1H, except that lenses are 2.5X, 4X, 10X, 40X, and 100X (oil immersion).

BL BRA5N1H2750.00

Model BRC7N1H. Same as Model BRD7N1H, but has multiple viewing adapter with two 30° binocular heads. Allows two people to sit comfortably apart while viewing specimens.

BL BRC7N1H3138.00

Model BRS7N1H. Like Model BRD7N1H, but has multiple viewing adapter with 30° triocular and 30° binocular heads and non-focusing camera tube. Ideal for photographing specimen while two people are viewing slide.

BL BRS7N1H3215.00

For Advanced Microbiology

You need controlled illumination of phase contrast microscopy for work with specimens with structural details that vary only slightly in thickness and refractive index. Phase annuli are matched to objectives and centered with aid of Bertrand lens between head and nosepiece.

Model CRBKT1H. Has following components:

"C"-shaped stand with right-hand un-graduated mechanical stage and rack-and-pinion substage.

30° binocular head.

Quadruple nosepiece with 10X, 20X, 40X, and 100X (oil immersion) phase contrast objectives.

Turret-type phase condenser with short and medium working distance elements, phase annuli, green filter, and focusable Bertrand lens.

Pair of 10X wide-field eyepieces with eyeguards.

Hi-Intensity in-base illuminator with 4-step pushbutton transformer for 115V 50/60Hz; field iris diaphragm for Koehler illumination; flip-in 10% neutral density filter; filter holder with daylight blue filter; and removable 3-wire line cord with switch.

BL CRBKT1H2518.00

Left-Hand Models

If you are left-handed, you can order any Balplan microscope with stand and stage for left-handed operation.

You will find left-hand models of all stand/stage combinations in Model Maker charts. For microscopes on this page, models beginning with "BR" change to "BL" and "CR" (for phase contrast models) becomes "CL".

For Hematology

Phase contrast microscope is ideal for differential blood cell counting and identification of abnormal cells. You get good contrast and definition over entire field without special preparation.

Two bright-field models with Optilume illuminators are also recommended for hematology.

Model CRBHB1H. Phase contrast model with following components:

"C"-shaped phase stand with right-hand ungraduated mechanical stage and rack-and-pinion substage.
30° binocular head.

Triple nosepiece with 10X bright-field, 40X phase contrast, and 100X (oil immersion) bright-field objectives.

Long working distance phase condenser with annulus for 40X objective and focusing telescope.

Pair of 10X wide-field eyepieces with eyeguards.

Hi-Intensity in-base illuminator with 4-step pushbutton transformer for 115V 50/60Hz; field iris diaphragm for Koehler illumination; flip-in 10% neutral density filter; filter holder with daylight blue filter; and removable 3-wire line cord with switch.

BL CRBHB1H1966.00

Model BRB2M1P. Bright-field microscope for hematology has Balplan "C"-shaped stand with right-hand ungraduated stage and rack-and-pinion substage.

30° binocular head.

Triple nosepiece with 10X, 40X, and 100X (oil immersion) planachromatic objectives.

3-element aplanatic condenser with iris diaphragm.

Pair of 10X wide-field eyepieces with eyeguards.

Professional Optilume in-base illuminator with 4-step transformer for 115V 50/60Hz; filter holder with daylight blue filter; and removable 3-wire line cord with switch.

BL BRB2M1P1516.00

Model BRB2L1L. Lower-priced bright-field microscope is same as Model BRB2M1P, except that it has Abbe condenser and Balplan Optilume in-base illuminator without transformer.

BL BRB2L1L1452.00

For Bacteriology

If microscope is going to be used for bacteriology, you do not need low-power objectives or Hi-Intensity illuminator. You can consequently save with these recommended models.

Model BRB2M1P. Bright-field microscope also recommended for hematology (see description under "For Hematology").

BL BRB2M1P1516.00

Fisher Scientific Company

Model BRB2M1L. You save still more with this model. It is identical to Model BRB2M1P, except that it has Balplan Optilume fixed-intensity in-base illuminator with removable 3-wire line cord and switch.

BL BRB2M1L1452.00

Model BRB3Z1H. Same as BRB2M1P, but has quadruple nosepiece with 4X, 10X, 40X, and 100X planachromatic objectives; aplanatic 3-element condenser with flip-in lens and iris diaphragm; and Hi-Intensity illuminator.

BL BRB3Z1H1722.00

For Cytology

These two Balpan bright-field microscopes are ideal for viewing structure, function, and formation of cells. Long-working distance 10X objective provides 10mm of working distance for technician to mark slides.

Model BRB9Z1H. Bright-field microscope with following components:

"C"-shaped stand with right-hand ungraduated stage and rack-and-pinion substage.

30° binocular head.

Quadruple nosepiece with 4X, 10X l.w.d., 40X, 100X planachromatic objectives.

3-element aplanatic condenser with flip-in lens and iris diaphragm.

Pair of 10X wide-field eyepieces with eyeguards.

Hi-Intensity in-base illuminator with 4-step pushbutton transformer for 115V 50/60Hz; field iris diaphragm; flip-in 10% neutral density filter; filter holder with daylight blue filter; and removable 3-wire line cord with switch.

BL BRB9Z1H1766.00

Model BRB9Z1P. Same as BRB9Z1H but with Professional Optilume illuminator.

BL BRB9Z1P1643.00

For Research

Recommended bright-field models have graduated stage, so you can record location of details of special interest, and return to them immediately.

Model BST7N1H. Has following components:

"C"-shaped stand with right-hand graduated mechanical stage and rack-and-pinion substage.

Triocular head with non-focusing camera tube.

Quintuple nosepiece with 2.5X, 10X, 20X, 40X, and 100X (oil immersion) planachromatic objectives.

4-element aplanatic condenser with flip-out hemispheric lens.

Pair of 10X wide-field eyepieces with eyeguards.

Hi-Intensity in-base illuminator with 4-step pushbutton transformer for 115V 50/60Hz; field iris diaphragm; flip-in 10% neutral density filter; filter holder with daylight blue filter; and removable 3-wire line cord with switch.

BL BST7N1H2000.00

Model BST8Z1H. Like Model BST7N1H, except that quintuple nosepiece has 4X, 10X, 20X, 40X, and 100X (oil immersion) objectives. Substage condenser is 3-element aplanatic with flip-in auxiliary lens needed to fill field with 4X objective.

BL BST8Z1H1942.00

Model CRTPJ1H. Phase contrast model with following components:

"C"-shaped stand with right-hand ungraduated mechanical stage and rack-and-pinion substage.

Triocular head with non-focusing camera tube.

Quintuple nosepiece with 4X bright-field and 10X, 20X, 40X, and 100X (oil immersion) phase contrast objectives.

Turret-type phase condenser with short and medium working distance elements, flip-in auxiliary lens, and focusable Bertrand lens.

Pair of 10X wide-field eyepieces with eyeguards.

Hi-Intensity in-base illuminator with 4-step pushbutton transformer for 115V 50/60Hz; field iris diaphragm; flip-in 10% neutral density filter; filter holder with daylight blue filter; and removable 3-wire line cord with switch.

BL CRTPJ1H2685.00

For Asbestos Counting

This phase contrast microscope is a useful tool for monitoring air pollution (according to OSHA requirements) in plants using asbestos products. Its wide-field 10X eyepieces with portion reticle facilitate counting asbestos particles on air sampling filters.

Model CRBLB3H. Phase contrast model with following components:

"C"-shaped stage with right-hand ungraduated mechanical stage and rack-and-pinion substage.

30° binocular head.

Quadruple nosepiece with 4X bright-field, 10X bright-field, 40X phase contrast, and 100X bright-field objectives.

Long working distance condenser with focusing telescope and green filter.

Pair of 10X wide-field eyepieces with portion reticle and eyeguards.

Hi-Intensity in-base illuminator with 4-step pushbutton transformer for 115V 50/60Hz; field iris diaphragm; flip-in 10% neutral density filter; filter holder with daylight blue filter; and removable 3-wire line cord with switch.

BL CRBLB3H2072.00

Balplan™ Bargains for Schools

Teachers can get versatility at bargain prices with Balplan™ microscopes. They can order only components they need, add or substitute others later.

Model BRB3Z1P. Bausch & Lomb suggests this model, with following components:

"C"-shaped stand with right-hand un-graduated mechanical stage and rack-and-pinion substage.

30° binocular head.

Quadruple nosepiece with 4X, 10X, 40X, and 100X (oil immersion) planachromatic objectives.

3-element aplanatic condenser with flip-out hemispheric lens.

Pair of 10X wide-field eyepieces with eyeguards.

Professional Optilume in-base illuminator with 4-step pushbutton transformer for 115V 50/60Hz; filter holder with daylight blue filter; and removable 3-wire line cord.

BL BRB3Z1P.....1599.00

BL BRB3Z1P

... For General Laboratories

Unspecialized laboratories that use microscopes occasionally do not need great versatility of advanced biological models. They get adequate capability at great savings by using less complete instruments.

Five models listed here, which Bausch & Lomb recommends for general laboratories, have all been suggested for other applications as well.

Components and Accessories for Balplan™ Microscopes

Interchangeable Heads

All Balplan heads are interchangeable. They can be rotated 360° on support arm, so viewer is on same side as stage or opposite it.

Left eyepiece tube can be focused independently to compensate for uneven visual acuity. Interpupillary distance is adjusted with patented dial calibrated directly in millimeters.

Integrated optical system of prisms, mirrors, and new nonpolarizing beam splitter is securely mounted in head. It will remain in perfect alignment with objectives, eyepieces, and cameras.

You order 10X or 15X wide-field eyepieces separately. You can also use standard B&L Huygenian eyepieces.

Binocular Heads

Recommended for all microscopes which will be used frequently and continuously. Adjustable interpupillary distance and focusable left eyepiece reduce eyestrain and fatigue. Take pair of eyepieces. There are two models:

BL 31-18-91

Triocular Head

For photomicrography. Binocular eye tubes, inclined 30°. Lever directs all light to eyepiece for field selection and focusing, then deflects it to camera for photography. Beam-splitting optics do not polarize.

BL 31-18-79.....583.00

BL 31-18-79

Interchangeable Nosepieces

You can interchange Balplan nosepieces quickly. Keep nosepieces with different combinations of objective lenses on hand, and use whichever you need for work at hand.

You can attach nosepieces to stand with lenses pointing forward or back, as you prefer. (Quintuple nosepiece requires BL 31-18-71 adapter.) They are factory-centered and have ball-bearing, precision detent that assures positive indexing of all objectives.

Nosepiece	Cat. No.	Ea
Triple	BL 31-18-66	46.00
Quadruple	BL 31-18-67	58.00
Quintuple	BL 31-18-68	77.00
Reversing Adapter	BL 31-18-71	13.00

Interchangeable Stages

Balplan stages are supplied in combination with stand, but can be replaced or interchanged.

All models have rack-and-pinion focusing substages. These can be on left or right, whichever you specify. There are adjustable stops at both ends of substage travel to prevent damaging slides, condenser, or illuminator.

Balplan mechanical stages have patented removable spring-clip slide holders. Other models have conventional removable clips.

Ungraduated Mechanical Stage

Concentric below-stage knobs give 50x70mm slide travel. Ball-bearing movement operates smoothly. Right-hand controls.

BL 31-60-18.....228.00

Graduated Mechanical Stage

Graduated in millimeters for 50x70mm slide travel (left/right, forward/back). Right-hand controls.

BL 31-60-17.....266.00

Plain Stage

Has removable slide clips. Accepts attachable mechanical stages. With rack-and-pinion substage.

BL 31-60-12.....119.00

Substage Condensers

Balplan™ condensers snap into fork mount and are secured with spring-loaded plunger.

Bright-field and phase contrast condensers have iris diaphragm and holder for 33mm diameter filters or dark-field stops. Phase models have 5.1cm dia green filter.

Bright-Field

BL 31-55-13

3-Element Aplanatic Condenser (1.25 N.A.)

With iris diaphragm and filter holder. Excellent spherical correction for photomicrography. Gives optimum Koehler illumination with BL 31-32-14 Hi-Intensity illuminator.

BL 31-55-13.....63.00

BL 31-55-15

4-Element Aplanatic Condenser (1.25 N.A.)

With flip-out hemispheric lens. Gives you Koehler illumination with all objectives and BL 31-32-14 Hi-Intensity illuminator.

BL 31-55-15.....98.00

Dark-Field

BL 31-55-34

Cardioid Condenser

For dark-field ultramicroscopy. Recommended for use with fluorescent illuminators. With funnel stop.

BL 31-55-34.....209.00

Wide-Field Eyepieces

BL 31-15-62-02

For use with Balplan microscopes. Power, 15X.

BL 31-15-62-02.....Pr/100.00

Fisher Scientific Company

Planachromatic Objectives

Balplan objective lenses give you high resolution and true colors in images that are flat from center to edge. Lenses are parfocal, so specimen stays in focus when you change magnification. They are parcentered, so specimen alignment does not change when you change lenses. Lenses are color-banded, so you can select one you want instantly.

Magnification	Numerical Aperture	Cat. No.	Ea
Planachromatic Objectives			
2.5X	0.0625	BL 31-12-20	98.00
4.0	0.09	BL 31-12-21	51.00
10.0	0.25	BL 31-12-22	56.00
20.0	0.50	BL 31-12-23	86.00
40.0	0.65	BL 31-12-24	91.00
Planachromatic Phase Contrast Objectives			
10.0X	0.25	BL 31-12-40	107.00
20.0	0.50	BL 31-12-41	170.00
40.0	0.65	BL 31-12-42	170.00

Eyepiece Micrometers

These micrometers fit Balplan 10X wide-field eyepieces. They have standard engraved patterns for linear measurements and particle counting.

Linear Micrometer

Engraved line 0.05" (1.27mm) long, divided into 0.001" (0.0254mm) intervals. Every tenth line (0.254mm) is numbered.

BL 31-16-69.....15.00

Whipple Disc

For counting bacteria and dust particles. 7.0mm square is subdivided into four equal squares, each of which is further divided into 25 smaller squares. One of these small squares is divided into 25 squares.

BL 31-16-71.....28.00

Howard Disc

For mold counting with microscope adjusted for Howard method. 9.96mm square is ruled into 36 equal squares.

BL 31-16-72.....28.00

Milk Smear Disc

For counting bacteria in milk by method of Breed and Brew. Circle 8.0mm in diameter is divided into equal quadrants by cross lines.

BL 31-16-73.....27.00

To prevent damaging slide or lens when changing objectives, 40X and 100X planachromatic lenses are retractable. Each 100X objective is supplied with vial of immersion oil. Balplan planachromatic objectives have ultimate in color correction. Phase contrast objectives have integral phase plate. Numerical aperture is standard measure of light-gathering power of lens.

Phase Contrast Accessories

You have choice of two phase contrast condensers to use with planachromatic phase contrast objectives, above. Both have iris diaphragms and holders for 5.1cm green filter and phase annuli to match objectives. Long working distance phase condenser is described below; turret-type phase condenser is listed on next page.

Annuli are transparent rings on interchangeable opaque slides which convert light passing through condenser into hollow conical beam. Sizes and positions of rings are matched to phase objective with which they are used.

You use Bertrand lens, inserted between head and nosepiece, or telescopic eyepiece to center annuli. Centering keys are supplied with condenser.

Long Working Distance Phase Condenser (1.25 N.A.)

Allows you to work at distances up to 15mm from slide. Supplied with iris diaphragm, green filter, and annuli to match phase objectives ordered with microscope.

BL 31-55-32.....209.00

BL 31-55-32

(Contd. on next page.)

Microscopes

Balplan™ Phase Contrast
Microscope Accessories
Contd.

Turret-Type Phase Condenser

Has interchangeable top elements for medium or short working distances. Short working distance element has 1.25 N.A. Medium working distance (5.6mm) elements have 0.70 N.A. Supplied with iris diaphragm, green filter, and phase annuli for 10X, 20X, 40X, and 100X objectives, plus clear aperture for bright-field microscopy. Annuli are individually centerable.

BL 31-55-31322.00

BL 31-55-31

Phase Annuli

Use in BL 31-55-32 Condenser to supplement those phase contrast objectives ordered with microscope.

Lens	Cat. No.	Ea
10X	BL 31-58-63	20.00
20	BL 31-58-64	20.00
100	BL 31-58-66	20.00

Bertrand Lens

You insert this auxiliary lens in outer microscope arm, between head and nosepiece. Slide moves lens in and out of position, so you can center phase annuli in optical path to obtain correct phase illumination.

BL 31-57-85187.00

Telescopic Eyepiece

You replace one of regular wide-field eyepieces with this focusing eyepiece, and use to center phase annuli.

BL 31-50-7870.00

Green Filter

Supplied with all Balplan phase contrast microscopes. Passes light in region of greatest visual acuity. Dia, 5.1cm.

BL 31-35-6112.00

Accessory Case

Holds phase contrast condenser, annuli, centering keys, four objectives, focusing telescopic eyepiece, and bottle of immersion oil for 100X objective

BL 31-40-8452.00

Other Balplan™ Microscope

Balplan
Polarized Light
Accessories

Because of non-polarizing coating on prisms and mirrors in Balplan microscope heads, you can examine and photograph specimens with polarized light without difficulty.

You polarize light by BL 31-57-77 Polarizer on whichever illuminator you use. You then have choice of two analyzers. Rotatable BL 31-57-84 Eyecap Analyzer fits 10X wide-field eyepieces, for visual examination of specimens. Non-rotating BL 31-57-86 Analyzer goes in head, so you can use polarized light for both visual examination and photography with triocular models.

Polarizer

Rotatable cap fits all Balplan illuminators. Ruled line shows plane of polarization.

BL 31-57-7751.00

Eyecap Analyzer

Fits 10X Balplan wide-field eyepieces. Rotatable 360°.

BL 31-57-8441.00

Non-Rotatable Analyzer

Permits polarized light photography when used with triocular heads. Mounted in head in fixed orientation, so you must rotate polarizer to change plane. With two apertures; one open for ordinary-light microscopy, other with analyzer. Requires BL 31-57-92 slide for mounting.

BL 31-57-8664.00

Analyzer Slide

Used with BL 31-57-86 Analyzer.

BL 31-57-9253.00

Case and Cover
For Balplan Microscope

Carrying Case

Holds Balplan microscope; 4 filters; non-focusing triocular camera tube; slide case; and hemacytometer case. Leatherette covering. Lock and key.

BL 31-40-9374.00

Plastic Cover

For single head Balplan microscopes.

BL 31-49-631.00

Accessories

A Hi-Intensity Illuminator you can use with Balplan Microscopes

Most useful illuminator in Balplan line. Four-step pushbutton transformer (three voltages, plus over-voltage) fits in base of stand and controls intensity of 6.5V lamp. Iris diaphragm gives you Koehler illumination.

Has holder with daylight blue filter and separate flip-in 10% neutral density filter. With separate 3-wire line cord with switch. 115V 50/60Hz.

BL 31-32-14215.00

6.5V Lamp

For Hi-Intensity illuminator.

BL 31-31-42Ea/11.00

15w Lamp

For Balplan Optilume.

BL 31-31-151.50

BL 31-32-14

See p 812 for other illuminators (external).
See Model Maker chart, pp 799-781 for in-base illuminators.

Plano-Concave Mirror For your Balplan™

In mount rotatable through 360° on vertical and horizontal axes. Dia, 55mm. Use with external illuminators. You may have to raise microscope about 2.5cm with plain base or spacer to get good alignment.

BL 31-50-6638.00

BL 31-50-66

Balplan™ Integrated Cameras

BL 42-12-28-15

You can use any camera to make photomicrographs with Balplan microscopes with triocular head, if you have adapter to fit camera tube. However, Bausch & Lomb have designed complete series of cameras and photographic accessories for use with Balplan instruments.

Once mounted on microscope, these cameras are integral part of its optical system. You focus with microscope eyepieces, then use lever in triocular head to deflect image to film.

4x5" (10x13cm) Camera

This camera photographs exactly what you see in 10X eyepieces, since focusing tube contains 10X auxiliary lens that increases objective power by same factor as eyepieces. It uses Polaroid® No. 545 filmpack of all available types (color, black-and-white positive, or black-and-white negative), or standard 4x5" (10x13cm) plates, sheet film, or filmpack. Camera has ground glass focusing screen, which you can use with accessory mirror (special order) to allow several people to see what is in field of film. With 10X focusing tube, built-in shutter, cable release, and 4x5" (10x13cm) filmpack back.

BL 42-12-28-15316.00

BL 42-12-27-15

BL 42-12-29-15

3 1/4x4 1/4" (8.3x11cm) Polaroid® Camera

This camera uses Polaroid Series 100 filmpack of all types. Auxiliary lens in focusing tube increases magnification of objective 7.5X. Complete with focusing tube, shutter, cable release, and Polaroid filmpack back.

BL 42-12-27-15417.00

35mm Camera

This camera enables you to make color transparencies, color prints, or black-and-white negatives with any film that has standard 24x36mm (1x1 1/2") negative area. Auxiliary lens in focusing tube magnifies objective power 3X. You can replace this lens with 5X adapter supplied with camera. Focusing tube has 3X and 5X lenses, shutter, and cable release.

BL 42-12-29-15291.00

Daylight Camera Filter

Type "D" filter for use with film balanced for daylight. Insert filter in slot of focusing tube to obtain more faithful color reproduction.

BL 31-35-8632.00

Bausch & Lomb Galen Microscopes

For biological/medical studies and lab work

New economically-priced microscopes designed by Bausch & Lomb for special needs of medical students and for work in hospital, college, and industrial labs. Available in monocular, binocular, and trinocular models with parfocal achromatic optics.

Focusing is fast, simple, and easy. Parallel eyepieces let you focus at infinity for greater comfort. Coarse to 28mm and fine to 2mm focusing controls are located at low level for convenience. Precise vertical adjustments are made through rack-and-pinion mechanism.

Graduated mechanical stage provides 77x54mm slide coverage for optimum viewing of specimens. Stage size, 140x135mm. Adjustable stage stop can be set in seconds to limit upward stage travel. Protects valuable specimens and objectives. Ideal for large volumes of similar slides.

Precentered substage contains Abbe N.A. 1.25 condenser with iris diaphragm and blue filter. Condenser held in place with 360° ring mount.

Achromatic objective lenses are standard in all Galen microscopes. Objectives are parfocal, so you don't have to focus again when you change magnification. They are infinity-corrected and parcentered, so you don't lose your field of view when you change lenses. Five objectives (4X, 10X, 40X, and 100X oil immersion) are precisely aligned in quadruple nosepiece with positive click stops.

Galen microscopes have 10X wide-field eyepieces. Use same eyepieces with all objectives. Eyepieces feature built-in telescoping eyeguards that block out unwanted room light.

In-base 30-watt illuminator remains perfectly aligned with whatever condenser and

objective you use. Light intensity completely adjustable for different specimens. Aids observation and reduces fatigue.

Galen Microscopes

With graduated mechanical stage, in-base 30-watt illuminator; 10X wide-field eyepieces with eyeguards; quadruple revolving nosepiece with 4 achromatic objectives (4X, 10X, 40X, and 100X oil immersion); Abbe N.A. 1.25 condenser with iris diaphragm and blue filter; and precentered substage with low rack-and-pinion focusing controls. Acid and reagent gray finish. Over-all dimensions: 21Lx17Wx35cmH. Net wt, 5.5kg.

Type	Cat. No.	Ea
Monocular	BL 31-70-01-01	746.00
Binocular	BL 31-70-01-02	895.00

Binocular, Phase Contrast	BL 31-70-01-04	1152.00

Accessories

Heads

All Galen heads are interchangeable. Can be rotated 360° on support arm, so viewer is on same side as stage or opposite it. Eyepiece tubes can be focused independently to compensate for uneven visual acuity. Interpupillary distance is adjusted with patented dial calibrated directly in millimeters. Heads are inclined 45° for comfort.

Type	Cat. No.	Ea
Binocular	BL 31-70-06	188.00
Trinocular	BL 31-70-07	291.00
Monocular	BL 31-70-08	75.00

Achromatic Objectives

Lens are parfocal, so specimen stays in focus when you change magnification. To prevent damaging slide or lens when changing objective, 40X and 100X achromatic lenses are retractable. Each 100X objective is supplied with vial of immersion oil.

BL 31-70-01-04

American Optical Microscopes For General Laboratories

AO MicroStar® and Series 150 microscopes meet most requirements of biological, biomedical, and general laboratories. FluoreStar® microscopes for fluorescence microscopy are on p 794.

Special section beginning on p 796 covers AO and B&L stereo-microscopes. Models designed for student and teacher use are on pp 819-821.

This catalog lists most widely used AO microscopes which Fisher stocks for convenience of laboratories. Any other AO model can be obtained on special order.

MicroStar Design

Every MicroStar microscope is made up of standardized interchangeable components. Model numbers are code designations which show what modules are used. Code letters specify kind of stand, illuminator, body, stage,

nosepiece with objective lenses and sub-stage condenser, and eyepieces.

Focusing mechanism is sealed in MicroStar stand to protect it from dust, fumes, and moisture. There are coaxial coarse and fine focusing knobs, graduated in $1\mu\text{m}$ divisions, on both sides. Knobs are placed low enough so you can rest your hand on table.

You focus by raising and lowering nosepiece and objective lenses, instead of by moving stage. Nosepiece is on ball-bearing slide, and is gravity-loaded so there is no mechanical pressure to damage lens or slide if you overshoot exact focus point. MicroStars also have exclusive adjustable Autofocus stop. You use coarse focus to get approximate setting for type of specimen you will be examining (slides, Petri dishes, tissue culture flasks, etc). Set Autofocus stop. Thereafter, you can return to this setting quickly and use

fine-focus knob to focus exactly.

MicroStar stages have release lever which enables you to lower stage up to 41mm to make room for dishes, flasks, and other large specimens.

Choice of Bodies

You have choice of monocular, binocular, and trinocular bodies to fit Series 10 or H20 MicroStar stands. Series 150 has different stand.

Models listed have bodies with inclined (50°), converging eyetubes that reduce eye-strain when microscope is in continual use. Binocular and trinocular models have graduated interpupillary width adjustment and separate eye-refraction adjustment on left eyepiece.

(Contd. on next page.)

AO Microscopes Contd.

Vertical monoculars are also available on special order. They all take same wide-field or Huygenian eyepieces.

MicroStars are also available with two or more bodies (see p 793). Pathologists find these dual-viewing models useful for conferences on controversial specimens, and bacteriologists and hematologists use them to train technologists.

MicroStar® bodies are interchangeable and use same eyepieces, nosepieces, objectives, filters, and other accessories. They rotate through 360°, so you can use microscope in preferred position.

MicroStar objectives are parfocal and infinity-corrected. Light leaves objective in parallel beam that is brought to focus by eyepieces. You can insert filters, mirror, prism, beam, splitter, etc in optical path without interfering with focus. You can scan specimen with low-power objective, find detail you want to examine, and turn higher-power objective into place without refocusing. With trinocular models, you focus through eyepieces, then deflect light to camera.

Integral Stages

Stages are mounted as integral part of microscope stand. They can be lowered 41mm to make room for large specimens.

Mechanical stages are research type, on enclosed ball-bearing slideway operated by substage control knobs. Models listed have right-hand controls, but you can specify left-hand controls for any model. Spring-loaded fingers hold slide and move it on two axes, over 50x75mm area.

Substage condensers snap into fork mount. They have rack-and-pinion focusing and iris diaphragm. Most models have standard Abbe condenser with 1.25 N.A.

In-Base Illuminators

MicroStars are designed for in-base or on-base illuminators, although you can use plano-concave mirror and external light source.

High-intensity tungsten halogen lamp is built into Series H10 and H20 stand. With other models, you specify illuminator separately. Illuminators are UL listed.

Photomicrography

Trinocular MicroStars can be used with any of cameras listed on pp 814-815. You have choice of 4x5" (10x13cm) Polaroid® or cut film, 3¼x4¼" (8.3x11cm) Polaroid (black-and-white or color), or 35mm. Microscope and camera are parfocal, so you focus through eyepieces, then use built-in prism to deflect light to film.

Accessory eyepiece has reticle that shows how much of field of view is covered by each size film. Accessory viewing screen (shown with Model XL10TU-QW on p 792) makes it possible for several people to see and discuss same specimen.

AO Series 10 and 20 MicroStar® Binocular Microscopes

Any laboratory that uses microscopes regularly should have binocular model. Personnel will not have eyestrain problem that can occur with monocular microscopes.

Series H20

Advanced American Optical microscope for general laboratory applications. Feature outstanding optical and mechanical design features of MicroStar line, plus built-in high-intensity 100w 12V tungsten halogen lamp. This type of halogen lamp is ideal for visual microscopy and photomicrography. Its intensity remains constant over its entire working life, and color temperature is constant at 3200K.

Lamp operates from 3-step 120V 60Hz variable transformer. UL listed. Heat absorbing glass protects optics and specimens. You can use aspheric condenser and centerable field diaphragm to obtain Koehler type of illumination.

Built-in double turret contains variety of color-correction filters. Upper turret has clear aperture, blue daylight filter, blue filter for Polaroid Polacolor® film, Wratten 80A+ blue compensating filter for color transparencies, and green filter for phase contrast microscopy and black-and-white photography. Lower turret has three neutral density filters (5%, 25%, and 50% transmission) and didymium color-balancing filter. Access door in base of stand makes it easy for you to change filters or insert polarizer.

Model XH20BU-JW. Binocular MicroStar has basic H20 stand with built-in halogen lamp plus following components:

Inclined binocular body with 10X wide-field eyepieces.

Ungraduated right-hand mechanical stage. 100X (oil immersion) palachromatic objectives.

1.25 N.A. Abbe condenser and auxiliary swing-cn lens.

AO XH20BU-JW.....2393.00

AO L10BU-HW

Fisher stocks leading models in three series of AO binocular microscopes — Series H20, Series 10, and Series 150. These are described on this page and the next.

Series 10B

This is most complete series of moderate-priced AO microscopes. Series 10 stand has horseshoe base with place for in-base or on-base illuminator or mirror. Models listed on next page have right-hand graduated or ungraduated mechanical stages, but simple and glide stages are also available.

Most Series 10B microscopes use same Abbe condenser as Series H20. Wide-field eyepieces are standard, but Huygenian eyepieces can be used. Full line of interchangeable achromatic and planachromatic infinity-corrected objective lenses are listed with optical specifications on p 816. Glass-to-air surfaces have Americote anti-reflection coating, which increases light transmission and contrast.

Model L10 BU-HW. Moderately-priced binocular microscope for applications that do not require low powers for initial scanning.

Series 10 stand has Type L in-base illuminator with 15w 6.5V pre-centered tungsten lamp operated by 5-step 115V 60Hz external variable transformer. UL listed. Prefocused optical system has centerable field iris diaphragm that fills fields of all objectives and permits use of Koehler illumination. Built-in neutral density filter can be swung in and out of light beam to change intensity with blue filter.

Ungraduated mechanical stage has right-hand controls. Aspheric condenser has 1.25 N.A. and fills field of low-power objectives without auxiliary lens.

Inclined binocular body has converging eyetubes with 10X wide-field eyepieces. Focusing triple nosepiece has 10X, 45X, and 100X (oil immersion) achromatic objectives.

AO L10BU-HW1533.00

Model L10BU-EW. This and next model have AO planachromatic objectives, which have flatter field and better color correction than standard achromatic lenses. It is otherwise same as Model L10BU-HW, except that triple nosepiece has 10X, 40X and 100X (oil immersion) planachromatic objectives.

AO L10BU-EW1608.00

Model XL10BU-FW. Same as Model L10BU-HW, except that quadruple nosepiece has 4X, 10X, 40X, and 100X (oil immersion) planachromatic objectives. Auxiliary swing-in condensing lens is used to fill field of 4X objective.

AO XL10BU-FW1693.00

Objective lenses, eyepieces, condensers, and other components and accessories for AO Series H20, Series 10, and Series 150 microscopes are described on pp 816-817.

For more information on MicroStar microscopes, check 23 on reader service card at end of blue index pages.

AO Series 150 Binocular Microscopes

American Optical has combined its advanced infinity-corrected optics with many features of its MicroStar® line in simplified microscopes that cost less.

Series 150 microscopes have inclined reversible binocular bodies. Interpupillary and left eyepiece adjustments adapt to individual user. Wide-field eyepieces have built-in pointer.

Series 150 microscopes have similar focusing nosepiece as MicroStar Models with low-position coaxial coarse and fine focusing knobs. Stage and body are fixed, giving maximum stability. Exclusive AO Autofocus stop is preset to stop objective from striking standard slide and cover glass. You turn coarse focus knob directly to stop, then focus with fine control. Slide and lenses can't be harmed.

Stand takes high-intensity Type L halogen illuminator with continuous in-base variable transformer, or fixed-intensity Types N and U. All three have built-in color compensating filter.

Models listed here have graduated mechanical stage with rack-and-pinion substage adjustment. Condensers mounted on substage.

Model N150BGA-QW. This popular Series 150 microscope has inclined (50°) binocular body with 10X wide-field eyepieces, Type N fixed-intensity in-base UL listed illuminator with blue filter, and graduated mechanical stage with right-hand controls. Abbe condenser (1.25 N.A.) has iris diaphragm.

Focusing quadruple nosepiece has 4X

achromatic, 10X planachromatic, and 45X and 100X (oil immersion) achromatic objectives.

AO N150BGA-QW1020.00

Model N150BGA-HW. Identical with Model N150BGA-QW but has triple nosepiece with 10X planachromatic and 45X and 100X (oil immersion) achromatic objectives.

AO N150BGA-HW972.00

Handy Manomark® Pens

Write on paper, plastic, glass, metal, wood, cloth

Fine-line felt-tip pens with extra tip conveniently stored on top of pen. Patented precision seal valve guarantees continuous flow of ink. Ink fully resistant to acids, alkalies, alcohol. Package of 12 color-coded pens with assorted colored inks.

13-385Pk of 12/14.40

AO MicroStar® Trinocular Microscopes For Photomicrography

Microscope with trinocular head enables you to photograph specimens exactly as you see them, with variety of cameras and films. With AO Series 10 and H20 parfocal MicroStar® models listed here, you focus with microscope eyepieces, then use lever-operated prism to deflect light to camera.

These microscopes all have advanced optical and mechanical features of MicroStar line, described on pp 789-790. Accessory cameras — 4x5", 3¼x4¼" (10x13cm, 8.3x11cm) Polaroid® and 35mm — are listed with other photographic accessories on pp 814-815.

You can also mount AO 1050 viewing screen on camera tube, so that two or more people can study same specimen at same time.

Series H20

These microscopes have integral quartz/iodine high-intensity illuminator, ideal for color photography.

Model XH20TU-QW. Stand has built-in high-intensity illuminator with 100w 12V halogen lamp, operated from 3-step 120V 60Hz transformer, and ungraduated right-hand mechanical stage. Abbe condenser (1.25 N.A.) in fork mount is used with auxiliary swing-in lens.

Trinocular body has inclined (50°) converging binocular eyetubes with 10X wide-field eyepieces. Lever-operated internal prism deflects light from eyepieces to camera after focusing.

Quadruple focusing nosepiece has 4X, 10X, 45X, and 100X (oil immersion) achromatic objectives.

AO XH20TU-QW2292.00

Model XH20TG-QW. Identical with Model XH20TU-QW except that it has graduated right-hand mechanical stage.

AO XH20TG-QW2330.00

Model XH20TU-FW. Same as Model XH20TU-QW, except that nosepiece has 4X, 10X, 40X, and 100X (oil immersion) plan-achromatic objectives, with flatter field and better color correction than achromatic lenses.

AO XH20TU-FW2367.00

Model XH20TU-JW. Same as Model XH20TU-QW, but has quintuple nosepiece with 4X, 10X, 20X, 40X, and 100X (oil immersion) planachromatic flat-field objectives.

AO XH20TU-JW2466.00

Series 10

These microscopes have UL listed Type L in-base illuminator with 115V 60Hz variable transformer and blue filter.

Model XL10TU-QW. This trinocular MicroStar is shown with auxiliary AO 1050 viewer. Standard Series 10 MicroStar stand has Type L in-base illuminator with 115V 60Hz 3-step transformer and blue color-compensating filter, ungraduated right-hand mechanical stage, and Abbe condenser (1.25 N.A.) with auxiliary swing-in lens to fill field of low-power objectives.

Trinocular body has converging inclined (50°) binocular eyetubes with 10X wide-field eyepieces. Quadruple focusing nosepiece has 4X, 10X, 45X, and 100X (oil immersion) achromatic objectives.

AO XL10TU-QW 1691.00

Model XL10TG-QW. Same as Model XL10TU-QW, but has right-hand graduated mechanical stage.

AO XL10TG-QW1729.00

Model XL10TG-FW. Same as Model XL10TG-QW, but with quadruple nosepiece and 4X, 10X, 40X and 100X, (oil immersion) planachromatic flat-field objectives.

AO XL10TG-FW1804.00

Accessory Viewing Screen

For AO Trinocular Microscopes

When small conference group wants to discuss details of specimen under microscope, they are all able to view it at same time. They can do it with 15cm diameter viewing screen that you can mount on camera adapter of any AO trinocular MicroStar microscope in Series 10 or H20.

Screen will show what you see in 10X wide-field eyepieces at magnification 7.5X power of objective you use with it. Built-in prism deflects image to ground-glass screen backed by light-intensifying Fresnel lens.

AO 1050241.00

AO XL10TU-QW

AO XL10TG-QW

AO DXL10BU-QW

AO MicroStar® Series 10 Dual-Viewing Microscopes

For Teaching and Staff Consultation

These instruments have two bodies on same stand. Image splitter directs same field of view to both sets of eyepieces. Transparent green arrow is projected into image plane, so users can point out details of interest.

These microscopes make it easy for pathologists, biologists, biomedical investigators, and forensic scientists to confer on specimens. They are ideal for training technologists in blood counting, cytology, staining techniques, etc. With trinocular models, you can photograph important details as you find and discuss them.

Model DXL10BU-QW. With Type L in-base illuminator and 120V 60Hz transformer; ungraduated right-hand mechanical stage; aspheric substage condenser with auxiliary lens; converging binocular body with 10X wide-field eyepieces; and quadruple focusing nosepiece with 4X, 10X, 45X, and 100X (oil immersion) achromatic objectives, plus dual-viewing adapter and second binocular body with 10X wide-field eyepieces.

AO DXL10BU-QW.....2499.00

Model DXL10TU-QW. With this trinocular model you can photograph specimens you examine and discuss. It is shown here without camera, used to train laboratory personnel. MicroStar® stand, in-base illuminator, nosepiece, and objectives are same as Model DXL10BU-QW, but it has trinocular body with camera tube and built-in deflecting prism. Adapter takes any of AO microscope cameras on pp 814-815.

AO DXL10TU-QW2572.00

Dual-Viewing Assembly. Converts your present Series 10 or H20 MicroStar microscope for dual viewing. It includes adapter with illuminated pointer, second binocular body, and pair of 10X wide-field eyepieces. Pointer is operated on same transformer as in-base illuminator.

AO 1039B881.00

Combine Orders for Discounts

All AO Series 10 and H20 MicroStar models may be grouped to qualify for this 10% discount. FluoreStar® models for fluorescence microscopy (p 794) may be grouped with other Series 10 and H20 models.

Series 150 microscopes may be grouped for quantity discount, but they may not be combined with instruments from other series.

For further information, consult your nearest Fisher branch.

AO Series 10M Monocular Microscopes

Provide advanced optical performance at low cost

These microscopes have MicroStar® optical and mechanical features. Inclined (50°) monocular eyetube can be rotated 360° and interchanged with binocular or trinocular bodies. It uses both wide-field and Huygenian eyepieces.

Nosepieces and objectives are same as in higher-priced instruments. Nosepiece — not stage — moves when you focus, and is gravity-loaded to protect lenses and slides. Enclosed focusing mechanism rides on ball-bearing slide-way. Fine focus has micrometer screw graduated in 1µm increments.

You have choice of ungraduated or graduated mechanical stages with right or left-hand adjustment, and Micro-Glide or plane stages. Abbe condenser with iris diaphragm is focused by rack-and-pinion substage.

Type U on-base illuminator is designed especially for monocular microscopes. UL listed.

Model U10MU-QW. Has Series 10 MicroStar stand with Type U on-base illuminator, ungraduated right-hand mechanical stage, and 1.25 N.A. Abbe condenser in fork mount.

Inclined rotatable monocular body has 10X wide-field eyepiece. Quadruple focusing nosepiece has 4X, 10X, 45X, and 100X (oil immersion) achromatic objectives.

AO U10MU-QW946.00

Model U10MU-HW. Same as Model U10MU-QW, but with triple nosepiece and 10X, 45X, and 100X (oil immersion) achromatic objectives.

AO U10MU-HW880.00

AO U10MU-HW

AO Series V20 FluoreStar® Microscope

For examining fluorescent specimens

American Optical FluoreStar® microscope is designed especially for fluorescence microscopy.

In this technique, you selectively stain parts of specimen with such dyes as auramine, rhodamine, or acridine orange, which fluoresce under ultraviolet light. In fluorescent antibody method, you react fluorescent compounds with antibodies, which then attach themselves to specific kinds of bacteria. In both methods, structures or organisms are illuminated by their own bright fluorescence.

With AO FluoreStar microscope source of ultraviolet is in-base or external mercury vapor or tungsten halogen lamp. Exciter filters stop visible light but let UV pass on to specimens. Turret with barrier filters fits in stand between objectives and eyepieces. These filters stop UV, which would injure eyes and fog photographic film, but pass visible fluorescence.

These microscopes have same kind of stand as Series H20 MicroStars® (see p 792), but in-base illuminator is 50w mercury vapor lamp operated from 120V 60Hz power supply.

Double filter holder in base has Corning 5113 and 5840 and Schott BG-12 exciter filters which stop visible wavelengths and let

365nm ultraviolet line pass. Holder will take other 31.5mm dia exciter filters. It also contains heat absorbing filter, three neutral density filters (5%, 25%, and 50% transmission), and frosted glass diffuser. This is used with open aperture for bright-field work.

Dark-field condenser in centerable mount is provided for fluorescence microscopy. It has funnel stop for use with 100X objective. Regular 1.25 N.A. Abbe condenser in fixed mount is provided for bright-field microscopy.

Double barrier-filter turret between body and stand has Eastman 2A, Schott OG-1, and Schott GG-9 filters to stop ultraviolet and pass image of fluorescent structures in specimen. Turret takes any 18.5mm dia filter.

V20 FluoreStar can be converted for other types of microscopy.

Model V20TU-FDQW. Has V20 stand with mercury vapor lamp and 120V 60Hz power supply. Double filter holder has exciter filters, open aperture, heat absorbing filter, frosted glass diffuser, and 5%, 25%, and 50% neutral density filters.

Dark-field condenser in centerable fork mount. Abbe condenser (1.25N.A.) in fixed fork mount.

Stand has ungraduated right-hand adjustment mechanical stage; trinocular body with

converging eyetubes and 10X wide-field eyepieces; and quadruple nosepiece with 10X, 20X, 45X, and 100X (oil immersion) achromatic objectives. Double turret has Schott OG-1, Eastman 2A, and Schott GG-9 barrier filters.

AO V20TU-FDQW2876.00

AO V20TU-FDQW

Ultraviolet Illuminators for Fluorescence Microscopy

Fluorolume® . . . UV and White Light Source

Model 645 Fluorolume® uses 200w mercury arc lamp with exciter filter as ultraviolet source, or with opal glass diffuser as white light source. You can use it with any Series 10 MicroStar, and with other microscopes that have adapter for barrier filters and sufficient clearance below substage condenser.

You mount Fluorolume and microscope on baseplate as shown in illustration.

Fluorolume slides on polished metal track. When you move it forward against stop, integral 45% mirror is positioned under condenser and projects UV beam along optical axis of microscope. When you slide it back, you can use microscope's in-base illuminator.

Ordering Information: With housing and baseplate; mercury vapor lamp; 115V 60Hz power supply with 3-wire grounded lead; case with Corning 5840, Corning 5113, and Schott BG-12 exciter filters; 75mm square heat absorbing glass; opal glass diffuser; white light dark-field filter with aperture plate; light-excluding slide; and 1 oz (30ml) of low-fluorescence immersion oil.

AO 6451374.00

Height Adapter

Mount on baseplate to raise microscope so Fluorolume mirror housing will fit under substage condenser. H, 25mm.

AO 64632.00

AO645 with Microstar Microscope

AO-2070C

Vertical Illuminator Converts MicroStars® for Fluorescence

Convert Series 10 and 20 MicroStars® for incident-light fluorescence microscopy with AO vertical illuminator.

Unit locks in place between body and stand. Ultraviolet source is 50w mercury lamp with holder and 120V 60Hz power supply. Exciter filters B-612, KU-418, IF-436nm, and IF-546nm fit exciter filter wheel. Unique dichroic beam-splitter deflects UV down through objective lens onto specimen.

Light from fluorescent structures or organisms returns through objective, beam-splitter, and barrier filter. Beam-splitter has 450, 500, and 560nm selective elements and open aperture for other methods. Barrier filter wheel has GG-475, OG-515, and OG-590 filters, plus open aperture. Touch code on dichroic and filter dials makes it easy to get recommended settings.

Ordering Information: Mercury vapor lamp with power supply, 4 exciter filters, 3 barrier filters, and 3 dichroic elements.

AO-2070C1783.00

Accessories for
Fluorescence
Microscopy

Schott OG-1 Barrier Filter

Absorbs short wavelengths. Transmit region where specimen fluoresces. Series 10, H20, and V20 microscopes take 18.5mm dia filters in 20.6mm dia mounts to fit AO 1110 turret. Vertical illuminator has integral barrier filters. In mounts. Orange.
AO 11249.50

Dark-Field Condenser

Use to convert Series 10, H20, and V20 MicroStar® microscopes for fluorescence microscopy. Centerable fork mount, with funnel stop for use with 100X objective.
AO 214F162.00

Linear Polarizing Film

You can cut this tough, flexible polarizing film to fit filter holders of projectors, microscope illuminators, other apparatus. Polarizing (dichroic) crystals are bonded between two layers of clear cellulose acetate. Illustrate optical activity of sugar and other compounds. Show brilliant colors when glass or clear plastic is strained, and how shape of object concentrates force in certain places. Resulting film is stiffer and stronger than acetate sheet alone. Box contains one sheet.

Size	Cat. No.	Box
6x6" (15x15cm)	13-789A	8.25
12x12 (31x31)	13-789B	31.90

Polarization Kit

Adapts your microscope for polarization. Kit provides polarizer and analyzer for B&L, American Optical, Zeiss, Leitz, and other microscopes in handy case. Polarizer disc goes in condenser filter holder. Analyzer is installed in eyepiece, under eye lens assembly. Selected sextant-grade Polaroid® film is sandwiched between plane glass plates. Index lines on mount show direction of polarization axis.
BL 31-52-62-7512.00

Stereo-Microscopes for
Electronics . . . Industry . . .
Medicine . . . Biology . . . Ecology

B&L StereoZoom®, pp 797-803
B&L StereoZoom 5, pp 804-806
AO Cycloptic®, pp 809-810
AO Series 20, p 810
AO StereoStar/Zoom®, p 811

Modern stereo-microscopes have high resolution and even greater flexibility and convenience than conventional microscopes — generally at lower prices. Fisher stocks leading American Optical Cycloptic® Series 20, and StereoStar/Zoom® microscopes, and Bausch & Lomb StereoZoom® models. Other models are available on special order.
With stereo-microscope, as in normal vision, each eye sees object from a different angle, so it has natural three-dimensional appearance. Two independent optical trains use same objective or pair of matched objectives. Large depth of field and long working distance between objective and specimen allow you to examine large objects. With zoom models, you can scan at low power, then change smoothly to higher magnification to study selected details.
Stereo-microscopes are major factor in industrial miniaturization. They are used to inspect electronic components, including microscopic integrated circuits, and for quality control of small machine parts. Stands like

B&L Type SK, in illustration, allow you to use microscope to guide machine in delicate work.
Pathologists and medical research workers use stereo-microscopes to make preliminary examination of whole tissue specimen, before sectioning. Biologists examine cultures and whole organisms. Ecologists identify causes of pollution and eutrophication. Geologists check composition of ores and rocks, and ceramists inspect structure of refractories and sintered materials.
American Optical and Bausch & Lomb stereo-microscopes use low-power, long focal-length objectives with higher-power, interchangeable eyepieces. Internal lens systems change magnification stepwise or (in zoom models) continuously over considerable range.
Since you examine surface of specimens, you don't need an expensive substage condenser or in-base illuminator. External illuminators light whole specimen or spotlight details of interest.

Bausch & Lomb StereoZoom® Microscopes

High resolution . . . flat field
Interchangeable stands, bodies & lenses
Up to 7X zoom magnification

A comprehensive family of modular stereo-microscopes with interchangeable zoom bodies (power pods), stands, and supplementary lenses.

StereoZoom Model Maker chart on pp 800-801 gives specifications for 30 models. You can make up more than 40 other models, using additional support arms and power pods not in chart. Six models, which Bausch & Lomb especially recommends for industrial applications, teaching, and research, are fully described. (Most of these include illuminators and other accessories.)

StereoZoom microscopes are made to Greenough design. This has two matched converging optical systems — eyepiece, zoom optics, and objective — precisely aligned so they focus at same point. Design gives true three-dimensional images without loss of light.

B&L coated optics give wide, flat field of view, sharp from edge to edge. You can change magnification range or working distance by changing eyepieces or attaching supplementary lenses over objectives.

7X Zoom Range

StereoZoom 7 power pods (V-1070, V-1070X, and V-1070P) give you highest resolution and largest zoom range — 1X to 7X — of any zoom microscope now available. Resolution is 300 lines/mm at 70X. Field of view is also larger than with other stereo-microscopes — 8.6cm with 0.25X supplementary lens. Depth of field is greater at low powers. Using 20X eyepieces and 2X supplementary lens, you can get total magnification of 280X.

Other StereoZoom power pods have smaller zoom ranges, but are comparable to other microscopes. Model VB-73 has range of 0.7 to 3X. Model VB-125 pod has 1X to 2.5X zoom range. VB-73 pod with 2X lens and 33X eyepieces gives you magnifications up to 198X, and with 0.5X lens you have 5.66cm field of view.

StereoZoom system is parfocal, with constant working distance for all combinations of eyepieces and power pods — 7.6cm with StereoZoom 7 power pod models, 10cm for other models. You can use reduced-power supplementary lenses to increase working distance for large objects — up to 27cm with StereoZoom 7 power pod microscopes, and up to 18cm with others. (Working distance is reduced when you use higher-power supplementary lenses.)

Bausch & Lomb StereoZoom Microscopes, Contd.

Interchangeable Stands

You can use any power pod with any of stands shown in the Model Maker (p 800). Rectangular zoom body can be turned 180° in support ring, so you can work with stage toward you or away from you.

Most StereoZoom® stands are designed for large opaque objects. However, Type B stand has detachable base with clear glass stage plate for transparent specimens.

Coaxial Illuminator

Types S and SK adjustable stands are ideal for electronic and other industrial inspection or quality control, especially when you use them with V-1070X pod and built-in coaxial illuminator. This projects beam of light into stereo-viewing system, so that it is focused on field of view through objectives. Light passing down right-hand lens train returns to left eyepiece, and vice versa, so you have

true stereovision relationship.

This type of on-axis illumination lights anything you can see in microscope — insides of drill holes. Or the insides of threaded parts, cracks or pits in castings, or corrosion cavities. Built-in turret has green, yellow, and daylight blue filters.

Support rings that hold power pods have illuminator port that fits the projection barrel of Nicholas illuminator (p 808). Light is beamed on focal point under microscope. You can also insert barrel through opening in back of Type B stand, to illuminate transparent specimens from underneath.

You can use fluorescent-lamp illuminator (p 808) on stand, to light opaque objects, or slip it under Type B stage for transparent specimens.

Integrated Cameras

StereoZoom models that have V-1070P power pod can be used with any of B&L Series II integrated cameras. These are also used with Balplan™ microscopes (see p 787).

Cameras and stereo-optical system are parfocal, so you focus with microscope eyepieces, then deflect light to camera and film. Adapter fits focusing tube on any of three cameras, using 4x5" (10x13cm) cut film or Polaroid® filmpacks, 3½x4¼" (8.3x11cm) Polaroid film, or 35mm film.

Other accessories for StereoZoom microscopes are described on pp 807-808.

StereoZoom Model Maker

You can find B&L catalog number for StereoZoom microscope with combination of features you want, by using Model Maker chart on pp 800-801. This chart is like Model Makers for Balplan microscopes (pp 778-781), except that you have only two components to select.

Each model is designated by combination of letters and numbers. First one or two letters identify stand. You have choice of six types, illustrated and described in first grouping on chart.

Second group of letters and numbers designates power pod and eyepieces, plus any integral accessories such as coaxial illuminator or camera adapter. You have five options.

You combine codes to get model number of microscope. Then use table at bottom of p 801 to find B&L catalog number for that model and current price.

Model BV-1070P Microscope with Polaroid® Camera.

Model Maker for B&L StereoZoom[®] Microscopes

How to Use Your StereoZoom Model Maker

Use this chart to obtain model number, catalog number, and price of StereoZoom[®] microscope you want. There are four steps

(1) **Select Stand** from illustrations and descriptions below. Note code letter designating that stand.

(2) **Select Power Pod** from illustrations and descriptions. Note code letters and numbers for power pod.

(3) **Get Model Number** by combining codes for stand and power pod. For example:
SK + V-1070P = SKV-1070P

(4) **Find Catalog Number and Current Price** for this model in last row on p 801.

StereoZoom Stands

A Stand. For opaque specimens, using reflected light. Rack-and-pinion focus. Scratch- and chemical-resistant contrast plate (one side black; other white) with stage clips. Port for barrel of Nicholas, general purpose, or fiber optics illuminators.

B Stand. For transparent specimens. Same as A Stand, but has locked-on removable base with clear glass stage plate and clips. Adjustable mirror below plate, used with external illuminator or replaced by in-base fluorescent illuminator. Extra port in back of base for Nicholas illuminator.

S Stand. Manually operated stand gives large horizontal and vertical excursion for industrial applications. Safety clamp permits free rotation around vertical column. Horizontal support arm slotted to prevent accidental rotation of power pod. Microscope on rack-and-pinion slide with illuminator port. Unit pivots 360° and inclines 180°.

SK Stand. Universal stand has rack-and-pinion for horizontal excursion; bevel and jack screw for vertical adjustment. Support has focusing slide and ring permitting power pod to rotate 360°, but no illuminator port. Illuminator can be attached to underside of pod.

K Stand. Heavy base gives stability for industrial applications. Double focusing range with two independent controls and slideways. Same adjustable support arm as S stand inclines 180° and pivots 360°. Has illuminator port.

KT Stand. Same double focus and adjustable pivoting and inclining support as K stand, but with 31x41cm composition baseboard to hold extra-large opaque objects.

StereoZoom Power Pods

**VB-73**

VB-73 Power Pod. Continuously variable (zoom) magnification of 0.7X to 3X. Supplied with 10X wide-field eyepieces, giving magnification of 7X to 30X. Eyetubes inclined 30° from vertical. Pod turns 180° on stand. Accepts 15X, 20X, and 33X eyepieces and 0.5X and 2X supplementary lenses.

**VB-125**

VB-125 Power Pod. Same as VB-73, but has 1X to 2.5X zoom magnification. Supplied with 10X eyepieces, giving magnification of 10X to 25X. Same eyepieces and supplementary lenses as VB-73.

**V-1070**

V-1070 Power Pod. High-resolution StereoZoom 7 pod gives zoom magnification of 1X to 7X. Supplied with 10X eyepieces, giving magnification of 10X to 70X. Larger field of view and depth of field than other stereo-microscopes. Eyetubes inclined 45°. Pod turns 180°. Accepts 15X and 20X StereoZoom 7 eyepieces and 0.25X to 2X supplementary lenses.

**V-1070X**

V-1070X Power Pod. StereoZoom 7 pod like V-1070, but with coaxial illuminator and variable transformer. Light is beamed through lens train directly on specimen in field of view. This on-axis illumination is ideal for inspection of multi-layer objects such as micro-electronic circuits with several processing stages. Permits close examination of drilled holes, inside-threaded components, etc.

Supplied with 10X eyepieces, giving 10X to 70X magnification. Accepts same eyepieces and supplementary lenses as V-1070.

**V-1070P**

V-1070P Power Pod. StereoZoom 7 pod like V-1070, but with adapter for B&L Series II integrated cameras (see p 813). You focus with eyepieces, then use lever to divert light to parfocal camera. Adapter accepts three cameras: 4x5" (10x13cm), 3 1/4x4 1/4" (8.3x11cm) Polaroid®, and 35mm. Supplied with 10X eyepieces, giving magnification of 10X to 70X. Takes same StereoZoom 7 eyepieces and supplementary lenses as V-1070.

Accessories

Bausch & Lomb offers full line of accessories to increase capability of its StereoZoom and other microscopes. Most commonly used eyepieces, supplementary lenses, illuminators, and cameras for StereoZoom microscopes are listed on pp 807-808. StereoZoom 7 microscopes take different eyepieces and supplementary lenses from other StereoZoom models.

StereoZoom Models Recommended for Electronics and Industry

Model AVB-73 with Nicholas Illuminator

For examination of opaque specimens

Continuous zoom magnification from 7X to 30X with 10X wide-field eyepieces; 3.5X to 198X with accessory eyepieces and supplementary lenses, not included. Type A stand has scratch- and chemical-resistant contrast plate (white on front; black on back). Nicholas illuminator (not shown) gives intense spotlight effect in crevices, drill holes, deep apertures.

Order two components:

AVB-73 Microscope	
BL 31-26-29-73	576.00
Nicholas Illuminator	
BL 31-33-05-01	57.00

Model KVB-73 with Nicholas Illuminator

**Flexible industrial instrument with
extra-long focusing range**

Also features variety of adjustable positions. Power pod and magnification same as Model AVB-73, but with Type K stand, featuring two focusing ranges. Arm holding pod can be swiveled 360° and inclined 180°. Heavy cast base gives good stability.

Order two components:

KVB-73 Microscope	
BL 31-26-39-73	670.00
Nicholas Illuminator	
BL 31-33-05-01	57.00

BL 31-26-29-73

Model SVB-73 with Nicholas Illuminator

**For use where wide horizontal and vertical
viewing latitude is required**

Power pod and magnification same as Models AVB-73 and KVB-73, but with Type S manually adjusted stand. Stand is exceptionally stable; no counterbalance required. Nicholas illuminator (not shown) attached to StereoZoom pod, so area of inspection is always lighted.

Order two components:

Model BVB-73 with Fluorescent In-Base Illuminator

**For viewing transparent specimens by
transmitted light**

Type B stand has clear glass stage plate. Fluorescent illuminator is inserted beneath stage. Illuminator can also be mounted on its own adjustable stand to light opaque objects.

Power pod with 10X wide-field eyepieces gives same zoom power and 3.5X to 198X magnification range (with accessories) as Models AVB-73, KVB-73 and SVB-73.

Order two components:

StereoZoom® Microscopes

Recommended for Education and Research

Model BVB-125 with Nicholas Illuminator

For both transparent and opaque specimens

Versatile but moderately priced microscope with VB-125 power pod. Has zoom range of 1X to 2.5X, or magnification of 10X to 25X with 10X wide-field eyepieces. Accessory eyepieces and supplementary lenses give you magnification of 5X to 125X.

Trans-illumination base of Type B stand has clear glass stage and adjustable substage mirror. Nicholas illuminator (not shown) can be used on own stand or in illuminator ports of microscope, for either trans-illumination or direct illumination. Pod can be turned 180° on stand.

Order two components:

BVB-125 Microscope	
BL 31-26-30-12	589.00
Nicholas Illuminator	
BL 31-33-05-01	57.00

Model BVB-73 with Nicholas Illuminator

Features greater zoom range

Same as Model BVB-125, except that VB-73 power pod has greater zoom range. It gives you continuously variable magnification of 0.7X to 3X, or total magnification of 7X to 30X with 10X eyepieces. Other eyepieces and supplementary lenses give you potential magnification of 3.5X to 198X.

B & L StereoZoom® 5 Microscopes

- Zoom range, 0.8X to 4.0X
- High resolution, 200 lines/mm at 4X
- Less color and edge distortion

Bausch & Lomb StereoZoom® 5 Microscopes are high-resolution, mid-range stereo-microscopes priced lower than competitive instruments with equivalent features. Whether your needs are on the assembly line, in the lab, or in quality control applications, these microscopes have all the features and accessories to let you customize your instrument for specific needs.

StereoZoom 5 Model Maker chart on p 806 gives specifications for 16 models. Fisher stocks all models plus necessary accessories. (Accessories are listed on pp 807-808.) Four models, which Bausch & Lomb especially recommends for industry and education, are fully described.

4X Zoom Range

StereoZoom 5 Microscopes give you zoom range of 0.8X continuously variable through 4.0X. High 5:1 zoom ratio lets you increase size range of examined specimen for closer observation. With eyepieces and supplemental lenses, magnifications from 2.4X to 160X are easily achieved. Twist of magnification knob zooms three-dimensional image to exact size required for optimum viewing.

Increased magnification is useless without high resolution. StereoZoom 5 Microscopes can resolve 200 lines/mm at 4X for crisp, sharp images, that allow more careful, detailed examination. Zooming is fast and image remains in focus through full range while maintaining constant 10cm working distance.

Power Pod Concept

You have your choice of two power pods. One with 10X wide-field eyepieces; the other with 15X wide-field eyepieces. Like all Bausch & Lomb power pods, precision optical elements are sealed in compact unit or pod which prevents dust and foreign matter from entering optical system. Power pods are rotatable full 180° to provide conventional or reverse eyepiece orientation.

Pods can be interchanged in a matter of seconds. Very important consideration if your viewing requirements change from time to time. Just insert power pod in stand and lock in place with retaining clips.

Better Viewing

You get less eye fatigue with StereoZoom 5 Microscopes because you see more detail and less image distortion for easier identification. Less edge distortion is achieved by flatter fields. You don't have to refocus and waste time to observe details at edges of field. You also get less color distortion through use of B & L quality, color-corrected lenses.

Tighter Tolerances

StereoZoom 5 Microscopes have tighter tolerances for easier, more precise alignment and smoother operation. All models accept 10X, 15X, and 20X eyepieces for higher or

lower magnification without loss of image quality. IPD torque has been increased so eyepieces hold position longer. Eyepieces are rotatable and inclined full 30° for comfort while viewing in sitting position. They can be locked in to prevent theft and tampering.

Interchangeable Stands

Use any power pod with any one of the eight stands and arms shown in Model Maker on p 806. Most StereoZoom 5 stands are designed for large opaque objects. However, Type B stand has detachable base with clear glass stage for transparent specimens. Rotatable Type ER arm and stationary Type E arm are designed to hold power pods on machines or in special applications.

StereoZoom® 5 Models Recommended for Industry and Education

Model AVB-84 For R&D . . . QC

Especially useful for research, development, and quality control. For examination of specimens obtained through core sampling and other exploratory techniques.

Power pod (with 0.8X to 4.0X zoom range) has 10X wide-field eyepieces to give magnification of 8X to 40X. Type A stand is used for examination of opaque specimens by reflected light. Scratch-and-reagent resistant contrast plate. Port at top of stand holds Nicholas general purpose illuminator. With stage clips.

BL 31-26-29-84665.00

Model BVB-60 For Biology

Versatile microscope for viewing transparent specimens by transmitted or reflected light. Great for educational applications.

Power pod with 15X wide-field eyepieces and 0.8X to 4.0X zoom magnification provides magnification from 12X to 60X. Type B stand has locked-on removable base with clear glass stage plate. Adjustable mirror below stage for use with separate illuminator. Mirror replaced with fluorescent illuminator for direct trans-illumination, if desired. Extra port located at rear of microscope base for Nicholas Illuminator.

BL 31-26-30-60726.00

Model SVB-84 For Large Specimens

For use where horizontal and vertical viewing latitude is required. Ideal for industrial applications where large specimens are examined.

VB-84 power pod has 10X wide-field eyepieces and 0.8X to 4.0X zoom magnification to yield 8X to 40X magnification. Type S stand is exceptionally stable, no counterbalance required. Safety clamp permits rotation of horizontal shaft around vertical shaft. Horizontal support arm slotted to prevent rotation of power pod. Microscope on rack-and-pinion slide with illuminator port. Unit pivots 360° and inclines 180°. With stationary Type E arm for mounting power pod to stand.

BL 31-26-40-84759.00

Model EVB-84 For Parts Inspection

Highly suitable for equipment manufacturing and inspecting of electronic parts. Can be mounted anywhere for clear examination of large opaque specimens.

Power pod with 0.8 to 4.0X zoom range and 10X wide-field eyepieces gives magnifications from 8X to 40X. Type E arm design holds power pod on other machines. Arm pivots 360° and inclines 180°. Contains focusing slide block. With illuminator port near mounting bracket.

Model Maker for StereoZoom® 5 Microscopes

4 steps to make a model:

(1) **Select Stand/Arm** from illustrations and descriptions in chart. Note code letter designating that stand/arm.

(2) **Select Power Pod** from illustrations and descriptions. Note code letters and numbers for power pod.

(3) **Get Model Number** by combining codes for stand and power pod. For example:
A + VB-84 = AVB-84

(4) **Find Catalog Number and Current Price** for this model in last row of chart.

Note: Microscope models beginning with S, K, and KT come with type E (stationary) arm. All models beginning with SK come with Type ER (rotatable) arm.

StereoZoom 5 Stands/Arms

A

A Stand. For opaque specimens, using reflected light. Rack-and-pinion focus. Without arm. See p 800 for more details.

B

B Stand. For transparent specimens. Locked-on removable base with clear glass stage. Without arm. See p 800.

S

S Stand. Manually operated stand gives larger horizontal and vertical excursion for industrial applications. With Type E arm. See p 800 for more details.

SK

SK Stand. Universal stand has rack-and-pinion for horizontal excursion; bevel and jack screw for vertical adjustment. With Type ER arm. See p 800.

K

K Stand. Heavy base gives stability for industrial applications. Double focusing range. With Type E arm. See p 800.

KT

KT Stand. Same as K stand but with composition baseboard to hold extra-large opaque objects. With Type E arm. See p 800.

E

E Arm. Holds power pod on microscope base. Inclines 180°; pivots 360°. Focusing slide block and illuminator port.

ER

ER Arm. Same as E arm, but with ring that permits 360° rotation of power pod. Without illuminator port.

StereoZoom 5 Power Pods

VB-84 Power Pod. StereoZoom 5 Pod with 10X wide-field eyepieces.

VB-60 Power Pod. StereoZoom 5 Pod with 15 wide-field eyepieces.

Power Pod

For StereoZoom 5 Microscopes. Pod can be interchanged in matter of seconds. Important consideration if your viewing requirements change from time to time. Just insert power pod in stand and lock in place with retaining clips. Provides continuously variable (zoom) magnification of 0.8X to 4.0X. Without

eyepieces. Eyetubes inclined 30° from vertical. Accepts 10X, 15X, and 20X eyepieces and 0.3X, 0.5X, and 2.0X supplementary lenses.

BL 31-27-40487.00

Illuminators for StereoZoom® Microscopes

Nicholas Illuminator Especially for Stereomicroscopy

Also effective external illuminator for direct lighting or substage mirrors. Intense spot of light is directed into small or deep apertures.

Variable 120V 60Hz transformer serves as base for adjustable jackknife linkage when used as external illuminator. Condenser barrel can be inserted in ports in StereoZoom® stands for pre-aligned oblique spot-lighting, or in back of Type B base to backlight transparent specimens.

At full 6.5V intensity, lens system projects 35mm spot with 600 foot candles (6460 lumens/m²) intensity and 2800°K color temperature.

Variable transformer base with 17cm line cord; removable jackknife linkage; adapter for condenser barrel; lamp housing with cooling fins; and 6.5V 2.75 amp prefocus lamp.

BL 31-33-05-0157.00

Fluorescent Illuminator for Reflective Samples or Heat-Sensitive Living Specimens

Highly flexible daylight illuminator uses two 4w fluorescent tubes to give cool, diffused light. Shows details well at low magnification.

Use it three ways: (1) on own base with adjustable link arm (above); (2) without base, under Type B glass stage; (3) with linkage attached to power pod.

Illuminator head with two 4w daylight-type fluorescent tubes; opalescent diffuser; detachable linkage; and base with 17cm line cord, for 120V 60Hz.

BL 31-33-61-0168.00

Daylight Fluorescent Tube

For B&L fluorescent illuminator. 4w.

BL 31-31-033.30

General Purpose Illuminator for Photometry, Lens Inspection, and Optical Experiments

Most versatile B&L illuminator for applications requiring controlled variable-intensity beam. Projects concentrated shaft of light, or covers broad field. Nicholas attachment has focusing telephototype projection system, which images field diaphragm at 15cm to infinity.

Lamp housing with 23 candlepower, 6.5V prefocus lamp; wide-aperture lens system in spiral-focus mount; iris diaphragm; Nicholas attachment: holder for 5cm round or square filters; adjustable linkage; 4-step transformer base for use on 120V 60Hz.

BL 31-33-40-44238.00

Replacement Lamps

For B&L general purpose illuminator. Prefocus base: flat filament: double contact (GE 1549). 6.5V

BL 31-31-42Ea/11.00

BL 31-33-05-01

BL 31-33-61-01

Trans-Illumination Base for Work with Transparent Specimens

This accessory makes it possible for you to use StereoZoom® microscopes with Type A stand when you have transparent specimens. Converts stand to Type B, with clear glass stage plate and substage mirror. Mirror can be removed if you want to use B&L fluorescent illuminator under base. Port at back accepts condenser barrel of Nicholas illuminator.

BL 31-26-84-8667.00

BL 31-26-84-86

Your Lab Ready for an OSHA Inspector?

AO Cycloptic® Microscopes with Unique Magni-Changer™

Imprinted to show magnification in position with 10X and 15X eyepieces

Cycloptic® microscopes have wide-angle three-component apochromatic objective, corrected for chromatic and spherical aberration. Standard objective gives you 10cm working distance between lens and specimen, with correspondingly large field of view. You can increase working distance to 20cm by replacing standard 1X lens with ½X objective.

Standard objective does not magnify. You use interchangeable fully-corrected wide-field eyepieces to obtain 10X or 15X magnification.

Outstanding feature of the Cycloptic microscope is its unique Magni-Changer™ magnifier. This is cylindrical barrel mounted in microscope body between eyepieces and objective. As you turn barrel, series of matched multi-element achromatic lens systems are interposed in both optical paths.

Magni-Changer knob is imprinted to show magnification obtained in each position with 10X and 15X eyepieces, with or without 2X auxiliary objective lens. With Type M Magni-Changer, you have five steps of magnification — 0.7X, 1X, 1.5X, 2X, and 2.5X.

With 10X eyepieces, this gives you magnifications of 7X to 25X. With 15X eyepieces, you have 10X to 40X. Auxiliary screw-in or swing-in lenses double power of objective.

Each Cycloptic series has different stand. Illuminators are mounted on microscope or on separate stand. Five models are offered as described below, and continued, next page:

Model 52M-1 Incorporates Simple-to-Operate Series 52 Table Stand

Microscope body and focusing slideway are on pivoting cap on end of horizontal arm. You can rotate microscope 360° around horizontal axis, and pivot it through 180°.

You can raise and lower sleeve on vertical support post to vary distance from objective to benchtop from 10cm to 41cm. You can swing support arm around post through 360°, and move it back and forth horizontally so objective is 32 to 53cm from post.

Reversible binocular body is inclined 30° from vertical (60° above horizontal). Interpupillary distance is adjustable from 48mm to 78mm. One eyepiece tube has eye refraction adjustment. Focusing knobs have adjustable tension so you can compensate for individual preference. Body has sleeve to hold projection barrel of Starlite® or vertical illuminator.

Standard 1X apochromatic objective, 10X wide-field eyepieces, and Type M Magni-Changer give you magnifications of 7X, 10X, 15X, 20X, and 25X at 10cm working distance.

AO 52M-1720.00

AO 52M-1

Model 53M-2 with Series 53 Universal Stand . . . Maximum Freedom in Positioning Microscope

Ideal for industrial inspection and quality control. You can give microscope body vertical excursion of up to 64cm for working distances of 10cm or 20cm, and horizontal excursion of 52 to 84cm from vertical support post. Support swivels 360° around post. Joints in support arm pivot 180°, and arm can rotate through 270°. Microscope body and slideway rotate 360° at end of support arm.

All movements are controlled by rack-and-pinion adjustments with large control knobs for easy use.

Inclined, reversible binocular body has standard 1X apochromatic objective, 15X wide-field eyepieces and Type M Magni-Changer, giving 10X, 15X, 20X, 30X, and 40X magnification at 10cm working distance.

AO 53M-21114.00

AO 53M-2

(Contd. on next page.)

AO Cycloptic Microscopes, Contd.

Model 56M-1 . . . Table Model Cycloptic® Microscope

With standard base-stage that has clear glass insert and stage clips. By adding AO 58S substage base, you can convert any Series 56 model to corresponding Series 58 model.

Adjustable-tension focusing knob has diagonally cut rack-and-pinion and heavy-

AO56M-1

duty slideway. You can use external illuminator or insert projection tube in sleeve in microscope body.

Inclined reversible binocular body has standard 1X apochromatic objective, 10X wide-field eyepieces, and Type M Magni-Changer™. You have magnifications of 7X, 10X, 15X, 20X, and 25X at 10cm working distance.

AO 56M-1620.00

Model 58M-2 with Detachable Trans-Illuminating Base

Body, lenses, and Magni-Changer are same as Model 56M-2, but Series 58 stand has detachable transilluminating substage base with tilting mirror. By using external illuminator, you can use this model with slides and transparent specimens at 10X to 40X magnification.

AO 58M-2679.00

Model 56M-2 with 15X Eyepieces

Same as Model 56M-1, but has 15X wide-field eyepieces that give you magnifications of 10X, 15X, 20X, 30X, and 40X with Type M Magni-Changer.

AO 56M-2620.00

Auxiliary Objectives

1½X Long Working Distance

Apochromatic Objective

Replaces standard objective of Series 52 and 53 Cycloptic microscopes. Increases working distance to 20cm.

AO 26668.00

¾X Apochromatic Objective

Extends working distance to 13cm.

AO 26248.00

2X Achromatic Auxiliary Lens.

Screws into standard objective mount to increase power.

AO 26545.00

2X Swing-Out Auxiliary Lens

Achromatic lens in swing-out mount. Increases power of standard objective.

AO 26485.00

Eyepieces

Wide-field Americote® eyepieces. Power, 15X.

AO 1147Pr/76.00

Check no. 22 on reader service card at end of blue index pages for AO Cycloptic Microscope brochure.

AO Series 20 Stereo-Microscopes with Revolving Nosepieces

AO 23LG

AO25LF

With AO Series 20 Stereo-Microscopes you change magnification just as you do with conventional microscopes, by using revolving nosepiece with objectives of different powers. You can also change power of eyepieces. Using 15X eyepieces, you can get magnifications up to 90X with models listed here.

Each microscope has two identical but independent optical systems, from eyepieces to objectives. Objectives are matched and paired in special mounts, keyed so they cannot be used in wrong position. Wide-field eyepieces are like those in Cycloptic® microscopes, but in different mounts to insure proper alignment.

Series 23

Model 23LG with Universal Stand

Has inclined binocular body with triple nosepiece, 10X and 15X wide-field eyepieces, 1.0X, 3.0X, and 6.0X paired achromatic objectives that give you magnification range of 10X to 90X.

AO 23LG1246.00

Series 25

Model 25LF with Table Stand

Table-model stere-microscope with paired, matched optical systems, revolving nosepiece with paired achromatic objectives,

and rack-and-pinion focusing. Square stage has removable glass plate which you can replace with opaque black or translucent white background plates.

Detachable horseshoe base has plano-concave mirror in fork mount, and slanting hand-rests shown in illustration.

With inclined binocular body, 10X and 15X wide-field eyepieces, and triple nosepiece with 1.0X, 2.0X and 3.0X paired achromatic objectives. Magnification range is 10X to 45X. Order stage clips separately.

AO 25LF1064.00

Model 25LG has Magnification Range of 10X to 90X

Same as Model 25LF, but with 1.0X, 3.0X, and 6.0X paired achromatic objectives.

AO 25LG1076.00

Accessories

Wide-Field Eyepieces

Wide field of view; full chromatic, curvature, and distortion correction. Have low-reflection Americote coating. Power, 15X.

AO 1147BPr/76.00

Eyeshields

Fit 15X eyepieces of AO Cycloptic and Series 20 Stereo-Microscopes. Two are required.

AO 1491.20

AO StereoStar/Zoom® Microscopes

Give you stereo-microscopy with continuously variable magnification

In AO StereoStar/Zoom® microscopes, complete stereoscopic optical system — paired objectives, zoom components, and wide-field eyepieces — is in dust-tight inclined binocular zoom body. Zoom control knobs are on both sides, with right knob calibrated to show magnification. System is parfocal, so you can scan through entire magnification range without refocusing.

American Optical makes two StereoStar bodies with fixed magnification, and two with zoom optics. Fisher stocks models with Style B (0.7X - 3X zoom range) and Style C (0.7X - 4.2X) bodies. Bodies rotate 360° on stands.

Inclined eyetubes have gear-linked inter-

pupillary adjustment of 55 to 75mm, and left eyepiece is focusable. Americote® eyepieces give you wide, flat field of view at all magnifications. Both 10X and 15X eyepieces have eyeshields.

Bodies can be used on any StereoStar stand. These are like AO Cycloptic® stands but have ring support for zoom bodies. Rack-and-pinion focus has adjustable tension. Support arm has twin ports that automatically align Starlite® illuminator beam with field of view.

StereoStar/Zoom microscopes come with 10X or 15X eyepieces. You can replace with 25X eyepieces, and supplement objectives

with auxiliary lenses to increase power or working distance. (Standard working distance for all models is 10cm).

Model 560B-1 for Opaque Specimens

Series 560 stand has opaque, interchangeable black and white stage plates. Style B zoom body (0.7X to 3X) gives magnification range of 7X through 30X with 10X wide-field eyepieces.

AO 560B-1620.00

AO 564B-2

AO 565C-1

AO 561B-1

Model 561B-1 for Both Opaque & Transparent Specimens

Series 561 stand with transparent stage and detachable base that accepts AO Starlite or in-base illuminator. (Starlite barrel is inserted through opening in back of base.) You use recessed knobs to rotate and position built-in diffusing reflector with plane mirror on back. Swing-out lens gives even illumination over entire stage area.

Style B zoom body and 10X wide-field eyepieces give 10X through 30X magnification range.

AO 561B-1680.00

Model 564B-2 with Manually-Operated Stand

Series 564 stand with horizontal support arm which can be rotated around and raised or lowered on vertical post. Microscope objec-

tives can be extended horizontally from 30 to 58cm from post and vertically through 36cm. Yoke holding microscope swivels through 180°.

Style B body has 15X wide-field eyepieces that give magnification range of 10.5X through 45X.

AO 564B-2723.00

Model 565C-1 with Universal Stand for Maximum Adjustment

Series 565 stand is universal type with 48 to 81cm horizontal extension by rack-and-pinion knobs and 64cm vertical excursion by hand wheel in base. Swiveling and rotating components give maximum freedom of adjustment.

Style C high-resolution zoom body and 10X wide-field eyepieces give 7X to 42X magnification.

AO 565C-11258.00

B&L and AO Microscope Illuminators

B&L MicroLite Illuminator

Use compact (21x7.9cm), inexpensive MicroLite with any microscope. Blue filter and bull's-eye condenser convert light from ordinary 60w drugstore bulb to daylight quality, beam it on specimen or substage mirror. Base can't tip, has padded feet, ball-and-socket mount for lamp housing. Shield protects you from glare; 2m line cord with switch. 120V AC/DC.

BL 31-33-0145.00

AO Starlite® Illuminator for Stereomicroscopy

Model 363 and 369 Starlite® illuminators are made by American Optical especially for use with its Cycloptic® and StereoStar/Zoom® stereo-microscopes. Prefocused condenser gives uniform high-intensity beam 25mm in diameter, 76mm from lens.

Starlite has stable base containing transformer for 120V 60Hz. U.L. listed. Swiveling three-link arm holds lamp housing and barrel at any angle when you use Starlite as external projector. Remove link arm from base, and you can attach it to StereoStar/Zoom body. Slip lens barrel out of holder, and you can insert it in ports in Cycloptic and Stereo Star/Zoom stands.

For transmitted light, put Starlite barrel in port at back of Series 561 StereoStar/Zoom base. (Attachments, available on special order, give you vertical on-axis illumination with AO stereo-microscopes.)

3-Step Variable Transformer

For Microscopes	Cat. No.	Ea
StereoStar/Zoom	AO 363V	62.00
Cycloptic	AO 369V	62.00

Fixed-Voltage Transformer

AO 369F57.00

Replacement Lamp

6.5V, 2.75 amp (GE 1460) for AO 363 and 360 illuminators.

AO 10335.00

On-Axis Lighting with Off-Axis Illuminators

Vertical illuminator in Model V-1070X StereoZoom® power pods puts light down into cracks, pits, and drill holes. With translucent materials (paper, plastics, textiles) you need combination of reflected and transmitted light.

You get them with B&L's vertical illuminator adapter for VB-73 and VB-125 StereoZoom pods. It screws on like supplementary lens, directs beam from Nicholas, general purpose, or other external illuminator straight down on specimen along optical axis. With Type B base, part goes through glass stage to mirror, is reflected, and backlights specimen.

BL 31-34-8348.00

BL 31-33-01

AO 369V

AO Universal Focusable Illuminator

Focusable triple-lens condensing system gives AO Universal Illuminator exceptional flexibility. Three-link jack-knife-type arm has swiveling base and head, so you can direct light beam in any direction. Use lamp on its transformer base with any microscope . . . mount it on special body receptacle of AO Cycloptic and StereoStar/Zoom microscopes . . . use it as variable-focus, variable-intensity spotlight in shops and laboratories.

Metal housing has fins to dissipate heat. Condenser is in spiral-focus mount with cap holder for iris diaphragm, 31.45mm diameter filters. (Ground-glass diffuser and blue filter supplied; others are accessories.) Clear 6.5V, 2.75 amp single-filament lamp is operated on three-step transformer giving 5, 6, and 7.5V on 120V 60Hz. U.L. listed.

AO 653123.00

AO Advanced Illuminator

AO Model 735 microscope lamp is suitable for use with most microscopes. You can adjust condenser for parallel or Koehler illumination, tilt lamp housing on base. Internal chimney and ribbed body dissipate heat of 100w lamp.

Condenser has left and right rack-and-pinion focusing knobs. Adjustable reflector. Iris diaphragm has knurled ring-mount and adjustment knob. 2.4m line cord with switch. 120V AC/DC. With simple filter holder, blue filter, ground-glass diffuser.

AO 735A194.00

100w Lamp

Multi-filament, bayonet base, for Model 735 illuminators.

Pk of 6/21.05

AO 653

B&L Integrated Camera Accessories for Dynoptic, DynaZoom, and StereoZoom 7 Microscopes

StereoZoom 7 Adapter

Accepts 3 cameras: 4x5" (10x13cm), 3½x4¼" (8.3x11cm) Polaroid®, and 35mm. Supplied as part of V-1070P power pods (p 801). Required with other StereoZoom 7 models.

BL 31-27-07307.00

Convertible Exposure Meter

Battery-operated meter with cadmium sulfide photometric sensor which measures candle power on three ranges: 0-100, 0-4, and 0-0.2 foot candles (0-1100, 0-43, and 0-2 lumens/m²). Sensor slips into slot in camera focusing tube and measures intensity of light deflected to camera. You use circular slide rule to compute exposure from foot candle reading, magnification, and film speed. Use auxiliary sensor holder to measure light on 4x5" (10x13mm) camera ground glass, in eyepiece, etc. Meter has battery-check setting.

BL 42-12-40-02189.00

BL 42-12-40-02

Viewfinder Eyepiece

10X wide-field eyepiece with focusing lens and field-of-view reticle. Shows exact field covered by 4x5" (10x13cm) 3½x4¼" (8.3x11cm), and 35mm Series II integrated cameras.

BL 42-12-0273.00

BL 42-12-20-02

Viewing Screen

Several people can see projected image of specimen under microscope when you use 15cm dia viewing screen in place of camera. Focusing tube has 7.5X amplifier lens, so you can see image magnified 7.5 times objective magnification times zoom magnification. Marc IV anti-reflection coating gives non-glare image on screen. Screen comes with focusing tube and microscope adapter.

BL 42-12-20-02224.00

Cameras for AO Cycloptic and StereoStar/Zoom Microscopes

American Optical has made it easy to photograph specimens with its StereoStar/Zoom® and Cycloptic® microscopes. You have choice of 35mm or 3½x4¼" (8.3x11cm) Polaroid Land Camera.

With any StereoStar/Zoom microscope, you attach adapter and camera in place of fixed eyepiece. Beam-splitter diverts part of light to film, part to side tube with focusing eyepiece.

With Cycloptic microscopes, you need AO 638 accessory adapter. This goes in the microscope body just above the MagniChanger™, and diverts light from one optical path to vertical tube that holds focusing eyepiece, shutter, and camera.

Camera tubes have supplementary lenses that increase magnification of objective and zoom lenses or MagniChanger 1.1X with Polaroid Land Camera, reduce it 0.5X with 35mm camera. Shutter, operated by cable release, has speeds of 1/125 to 1 second, bulb and time release.

StereoStar/Zoom Cameras

3½x4¼" (8.3x11cm) Polaroid Land Camera

Eyepiece adapter for StereoStar/Zoom microscopes. Includes beam-splitter, shutter with cable release, focusing eyepiece, and cam-

era body. Takes Series 100 Polaroid film-packs.

AO 679A.....707.00

35mm Camera

Eyepiece adapter for StereoStar/Zoom microscopes. Beam-splitter; shutter with cable release; focusing eyepiece; and camera body for 35mm film cassettes.

AO 679B.....820.00

Cycloptic Cameras

Photo-Tube Adapter

Required with all cameras used on Cycloptic microscopes.

AO 638181.00

3½x4¼" (8.3x11cm) Polaroid Land Camera

Same as AO 679A, but has adapter to fit vertical tube of AO 638 Photo-Tube Adapter (not included).

AO 680A.....707.00

35mm Camera

Same as AO 679B, but has adapter to fit vertical tube of AO 638 Photo-Tube Adapter (not included).

AO 680B.....820.00

AO 638

Cameras for AO MicroStar® microscopes are listed on next page

Cameras for AO MicroStar® Trinocular Microscopes

Basic . . . Semi-Automatic . . . Automatic

AO 1052C

American Optical offers family of 3¼x4¼" (8.3x11cm) Polaroid® and 35mm cameras, supplementing those on preceding page, for its MicroStar® Trinocular microscopes. There are three series:

- (1) Basic cameras.
- (2) Semi-automatic cameras with built-in PhotoStar™ exposure meter. You operate shutter manually.
- (3) Automatic cameras with ExpoStar™ meter that determines exposure and operates shutter.

These cameras have adapters that fit Series 10 and H20 trinocular MicroStars. Compensating lenses make camera and microscope parfocal, so you can use eyepieces to focus and select field, then divert light to film. Each camera comes with accessory field-of-view eyepiece with reticle that shows extent of field with each size camera.

Basic Cameras

Camera adapters fit all Series 10 and H20 AO MicroStar models. Built-in shutter, operated by cable release has speeds of 1/100, 1/50, 1/25, 1/10, 1/5, 1/2 and 1 second, with time and bulb. Field-of-view eyepiece supplied with each camera. Two models offered:

3¼x4¼" (8.3x11cm) Polaroid® Land Camera

Takes No. 100 Polaroid® film packs with black-and-white or color film. Compensating lens increases objective magnification 7.5X on film.

AO 1052A.....529.00

35mm Camera

Takes 35mm film cassettes. Same as AO 1052A, except that compensating lenses give you alternative of 2.8X or 5X magnification factor. Field-of-view eyepiece reticle shows limits of field for both magnifications.

AO 1053A.....393.00

Other Useful Tools for Your Lab

Ceramic Marking Ink

For heat-hardening applications. Apply with steel pen. Then fire with gas flame for permanency. 30g bottle.

Case of 12/248.40

AO 1053A

Semi-Automatic Cameras With PhotoStar™ Meters

AO PhotoStar™ is precalibrated solid-state exposure meter with cadmium sulfide sensor built into camera shutter module. Sensor measures light level of in-focus image of specimen in camera and transmits reading to control unit. You rotate dial to match meter readings, and scale shows correct shutter speed, from 1/125 second to 1 hour.

You adjust selector on handwheel for type of field, camera size, and film rating (ASA 10 to 6400). Two models offered:

3¼x4¼" (8.3x11cm) Polaroid® Land Camera with PhotoStar

Same as AO 1052A, but with PhotoStar semi-automatic exposure meter.

AO 1052B.....979.00

35mm Camera with PhotoStar

Same as AO 1053A, but with PhotoStar exposure meter.

AO 1053B.....843.00

AO 426B

Automatic Cameras With AO ExpoStar™ Meters

ExpoStar™ shutter control unit automatically makes correct exposure with any AO MicroStar® camera, using any kind of film. You simply set control unit and press button.

Sensitive cadmium sulfide sensor continually monitors light level at film plane of camera, as long as shutter is open. When film has received enough light, shutter automatically closes.

You pre-adjust control circuits according to size of camera, film speed (ASA8 to 6400), and film response characteristics (reciprocity). To allow for over-all brightness or darkness of image, you can set selector to increase or decrease exposure by half-stop.

Then press EXPOSE button. ExpoStar will make perfect exposure, even if line voltage

changes and light dims or brightens while you are making micrograph. ExpoStar operates on 115-120V 60Hz with 3-wire grounded outlet. UL listed.

3¼x4¼" (8.3x11cm) Polaroid Land

Camera with ExpoStar Shutter Control

Same film and optical characteristics as AO 1052A and 1052B, but with shutter automatically controlled by ExpoStar unit.

AO 1052C.....1657.00

35mm Camera with ExpoStar Shutter Control

Same characteristics as AO 1053A and 1053B, but with shutter automatically controlled by ExpoStar unit.

AO 1053C.....1521.00

4x5" (10x13cm) Cameras for Series 10 and H20 AO MicroStar microscopes, including models with PhotoStar and ExpoStar attachments, are available from Fisher branches on special order.

Eyepiece Micrometer

Use Filar Micrometer to measure images. Make accurate measurements on microscope images with 10X AO micrometer eyepiece. Fits eyetube of AO microscopes; locks with thumbscrew. Focuses with spiral collar.

As you turn micrometer drum graduated in 100 divisions, fiducial line moves across reticle in image plane. Index mark shows direction of motion. Line advances one reticle division for each revolution of drum, so one unit on drum equals 1/100 of scale division.

By using thumbscrew to make reticle zero line coincide with edge of structure you are measuring, you can read drum directly, estimate to 1/1000 of scale division.

AO 426B.....216.00

Micrometer discs are listed with eyepieces on p 817.

Labels in Dispenser

Roll of 1000 perforated gum labels. Each label 45Lx36mmW.

Cargille Immersion Oil

Greatly increases light gathering power with high-power objectives. Formulated to give refractive index of 1.5150 ± 0.0002 for D line at 25°C. Non-drying, so index will not change when exposed to air. Contains no polychlorinated biphenyl (PCB) compounds. Conforms to DIN 58-884 specs. Up to 20 specimens can be examined without refreshing oil. Standard for all oil-immersion microscopy.

Type A oil has low viscosity and very low fluorescence. It is supplied by American Optical with FluoreStar® fluorescence microscopes. Type B is higher-viscosity oil used in bio-medical microscopy.

Oil Immersion Kit

Contains 1 fl oz (30ml) each of Type A and B Cargille immersion oil.

Microscope Accessories for Classroom Use

Tri-Simplex™ Micro-Projector

With this micro-projector, you can project image of slide or living organisms in slide well or glass dish in any of three ways:

1. Vertically on tabletop.
2. Horizontally on wall or screen.
3. Indirectly, with projector vertical and mirror throwing image horizontally.

Tri-Simplex is inverted microscope that uses planachromatic objectives. Or an objective plus eyepiece, which functions as a projection lens. Bayonet-base 100w projection lamp with heat absorbing glass and double condenser lights slide or other transparent specimen on stage. Objective lenses in revolving turret project image of specimen on tabletop for sketching or discussion (projection head vertical), or on screen (head horizontal, as in illustration). With head vertical, so liquid on stage will not spill, you use 45° substage mirror to project image on screen.

Projector comes with 12X and 43X objectives in triple turret. For third objective in turret, use either 2.7X or 5X accessory objectives (12-477-5 or 12-477-10). You use 12X with fixed condenser and 43X with flip-in auxiliary condenser. By attaching 12-477-20 body tube and accessory projection eyepiece, you can increase magnification on screen up to 5X.

Ordering Information: With lamp, condensers, objectives, mirror, plastic cover, instructions, and transformer base. 120V 50/60Hz.
12-477.....370.00

AO Series 160 Microscopes for Schools and Colleges

Monocular microscopes are standard in most elementary and secondary schools, and for many junior college and undergraduate college biology classes. Prices are low. American Optical Series 160 microscopes have many features of research instruments.

AO Series 160

These modern monoculars have reversible inclined eyetube for more comfortable use by seated students. You focus by moving nosepiece and objectives with internal bronze cam, turned by coaxial coarse and fine focusing knobs. Nosepiece floats, so lenses won't be damaged or break slides if student overfocuses. Variable Autofocus™ stop helps prevent damage.

Parfocal, parcentered, fully corrected objectives are in nosepiece that revolves on hardened steel ball-bearings, has clock stops. Eyepieces are locked in — can't get lost. Wide-field and Huygenian eyepieces have pointer in image plane.

Condenser with disc or iris diaphragm is locked into stage — no chance of damage. (Advanced models have substage Abbe condenser.)

Illuminator is integral part of microscope base. It has chrome-plated reflector, condensing lens, blue glass filter and pushbutton switch for 15w, 120V lamp. UL listed.

Series 160 microscopes are designed for long, hard student use. Large, solid base prevents tipping, protects optics. Focusing mechanism is tamper-proof. Tough, chip- and stain-resistant finish is attractive dove grey.

AO L160PD-S1

Model L160PD-S1. Standard series inclined reversible monocular with plain stage and slide clips; in-stage condenser with disc diaphragm; and in-base illuminator for 120V 50/60Hz.

Coaxial low-position coarse and fine focus for double revolving nosepiece with 10X and 43X infinity-corrected objectives. Eyetube has locked-in 10X Huygenian eyepiece with pointer and scale.

AO L160PD-S1239.00

Model L161PE-T1. Intermediate series inclined reversible monocular with plain stage and slide clips; in-stage condenser with iris diaphragm; and in-base illuminator for 120V 50/60Hz. Coaxial low-position coarse and fine focus for triple revolving nosepiece with 4X, 10X, and 43X infinity-corrected objectives. Locked-in 10X Huygenian eyepiece with pointer and measuring scale.

AO L161PE-T1298.00

Model L161GA-UW. Same as Model L161PE-T1 but has triple revolving nosepiece with 10X, 43X, and 100X objectives. Other equipment includes: monocular body, in-base illuminator with built-in filter, graduated mechanical stage, Abbe condenser, focusable mount, iris diaphragm, and 10X wide-field eyepiece with pointer.

AO L161GA-UW574.00

Model L162GA-VW. Advanced model, same as Model L161GA-UW but has quadruple focusing nosepiece with 4X, 10X, 43X, and 100X (oil immersion) advanced achromatic objectives.

AO L162GA-VW622.00

AO Series 40 Stereo-Microscopes For Schools and Colleges

AO 41A

Students who use American Optical Series 40 Stereo-Microscopes have advantage of sharp, erect, three-dimensional images magnified up to 30 times.

Wide-field eyepieces are built in to prevent loss and breakage. Eyetubes are interlocked, giving 52 to 75mm adjustment range for interpupillary differences. They are inclined for comfortable use. Paired achromatic objectives are permanently aligned and centered, and protected by glass panel.

Rack-and-pinion focusing mechanism is completely enclosed. Slip clutch prevents jamming or damage at ends of focusing range. Large, flat stage (152x153mm) has opaque white background plate in reflected-light models, or glass stage plate with in-base illuminator. Some models have built-in spotlight focused on stage; others have both spotlight and in-base illuminator for transmitted light.

Microscope body is strong die-cast metal with resistant gray enamel finish. Focusing slideway is bronze and steel. All models have 95mm free working distance and 64mm focusing range.

Choice of 6 Models:

Model 41A. Fixed magnification inclined binocular stereo-microscope with opaque white background plate, but without illuminator. Paired 10X wide-field eyepieces and 1.5X objectives give total 15X magnification, with field of view 11.7mm in dia. With plastic dust cover

AO 41A.....193.00

AO 42A

AO 41RT

Model 41RT. Same as Model 41A, but with built-in 15w, 120V 50/60Hz illuminators for both reflected and transmitted light. Switches permit illuminators to be used together or separately. Transparent stage plate.

AO 41RT.....225.00

Model 42A. Same as Model 41A, but with Magni-Changer™ giving total magnifications of 10X and 20X.

AO 42A.....264.00

AO 42RT

Model 42R. Same as Model 42A, but has built-in 15w, 120V 50/60Hz spotlight with switch, focused on microscope stage for reflected-light illumination.

AO 42R.....280.00

Model 42RT. Inclined binocular stereo-microscope with transparent stage plate. Magni-Changer and 10X wide-field eyepieces give magnifications of 10X and 20X. Built-in 15w, 120V 50/60Hz illuminators for both reflected and transmitted light. Switch permits using illuminators separately or together.

AO 42RT.....295.00

Model 43RT. Same as Model 42RT, with two built-in illuminators, but with 15X wide-field eyepieces and Magni-Changer giving magnifications of 15X and 30X.

AO 43RT.....295.00

AO Starlite® Illuminators

You can use low-priced AO Starlite as substage illuminator with practically any microscope that doesn't have its own. Stand it on end, and use it as external illuminator with substage mirror. Lay it down or clamp it to substage, and it will send beam straight up through condenser.

Durable phenolic resin, housing has 15w, 115V long-life bulb, wide-angle reflector, condenser lens, and swing-out holder with ground blue filter. Line cord has switch.

AO 609B.....15.00

Starlite Illuminator with daylight filter.

Same as AO 609B, but with Coming Daylite filter.

AO 609D.....17.00

B&L Academic StereoZoom[®] Microscopes

Bausch & Lomb student-proofs its academic stereo-microscopes against accidents and tampering. All-metal stand with black chemical-resistant finish has large, stable stage, 19x14cm. Glass stage plate in illuminated models is gasketed to prevent spilled liquids from getting into base. Flat-base models have rotating stage plate with black and white contrast discs. Rack-and-pinion focusing knobs raise and lower microscope body on telescoping pillars, through 6.4cm range. Objective-to-specimen working distance, 9.8cm.

All Academic StereoZoom microscopes have 10X wide-field eyepieces, locked in eyetubes, with 47 to 72mm synchro-linked interpupillary adjustment. Zoom optics, objectives, and illuminator are also sealed in body for safety. In standard models, eyepieces have reverse orientation, with unobstructed stage, but conventional orientation is also available.

BL 31-27-70-01

Model Z-37L3. With zoom optics sealed in body giving magnification range of 15X to 37.5X. Dial-A-Light three-way internal illuminator for 120V 50/60Hz. Carrying case.
BL 31-27-70-01303.45

BL 31-27-99-01

Model Z-30L2. Same as Model Z-37L3 except that zoom optics have 7X to 30X zoom magnification range.

BL 31-27-99-01425.70

Special Microscope Table Provides Comfort for Microscopists

Microscope table consists of 2 Contempra[™] base units with knee space between them, topped by 32mm thick black Restek[™] work top.

Semi-circular cutout in work top over knee space lets microscopist sit close to microscope . . . in perfect position relative to eyepiece. Plenty of drawer and cabinet space for storage of slides and microscopes. Gray cabinet door. Choice of color for three drawers: beige, green, orange, yellow, or gray.

Ordering Information: With 31Dx38cmH reagent shelf attached to work top. Over-all dimensions: 79Lx145Wx132cmH. Shipping wt, 125kg (275 lb).

99-100608.00

FISHER[®]brand Microscope Cover Glasses

Made of finest optical glass. Uniform thickness and size. Free from bubbles, scratches and striations. Non-corrosive, non-fogging. Packed vertically in 1 oz (28g) crush-proof plastic boxes for easy dispensing. Clean and ready to use.

Corning Cover Glasses

Fine optical glass developed by Corning specially for cover glasses. High resistance to surface attack, weather. Remain clear for long periods under normal storage conditions.

Surfaces are plane and free from irregularities. Glass is water-white and free of stones, blisters, bubbles, and striae. Packaged in lint-free reclosable plastic boxes for complete protection.

Fisher Permout™

Cements cover glass to microscope slide

Consists of a synthetic polymer dissolved in toluene. Superior to either Canada balsam or gum damar for mounting specimens.

Permout™ is clear with permanent adhering qualities. Absolutely neutral. Will not become acid or discolor with age. 115°C melting point makes it more suitable than balsam or gum damar for micro-projection work. Refractive index of Permout is slightly higher than that of Canada balsam. Can be used with either artificial light or daylight.

Permout is thinner than commonly used balsam and damar solutions; hence easier to apply. Has little tendency to trap bubbles beneath cover glass.

Ordering Information: Available in 4-oz (118ml) and pint (473ml) bottles.

Micro Slide File

12-588

Accommodates about 112 of the 12-587 micro slide holders . . . 448 slides total. Over-all, 41Lx17Wx15cmH. Without micro slide holders.

12-58810.00

Micro Slide File Holder

12-587

Micro slides fit filing cabinet 12-588. Each micro slide holder holds four 75x25mm slides. Semi-circular notches in upper edge of slide holder facilitate inserting and removing slides. Aluminum. Pk of 10 holders.

12-587Pk/2.90
Box of 10 pk/22.00

Micro Slide Mailer

12-587-16

Needs no extra packing for 3rd class mail. FISHERbrand®. Heavy cardboard. Holds two 3x1" (76x25mm) slides with or without cover glasses. Thumb groove allows easy removal. Envelopes for mailing not needed. Box of 36 mailers.

12-587-16Box/6.75

Micro Slide Cabinet

12-580

500- to 1000-Slide Capacity

With flat sides and disappearing door, cabinets can be set side by side and stacked. 25 numbered aluminum trays each with 20 slide compartments. Put 2 slides in each compartment . . . double slide capacity to 1000. Seasoned oak cabinet, 30Lx22Wx25cmH.

12-580102.00

Test Tube Supports for Holding . . . Drying

Unique one-piece molded polypropylene support consists of base unit and many individual posts. Support holds eighty 10-13mm dia tubes placed open-end-up between posts. Support dries 102 tubes placed open-end-down over the posts. Autoclavable, stores easily in freezer or refrigerator.

Slide Staining Tray and Rack

Four-bar rack holds 22 slides; grill holds 10 cover glasses. Tray catches excess stain as it drains from slides. Stainless steel. Screws for leveling rack. 32Lx24Wx5cmH. 12-597-1059.75 (Clay Adams 3832)

12-597-10

Fisher Slide Warmer

Saves time and effort in tissue mounting and dehydration

Fast-heating aluminum warming plate (0.11 m²) holds up to fifty-six 1x3" (2.5x7.6cm) slides or twenty-four 2x3" (5.1x7.6cm) slides. Coated with black Teflon® to resist corrosion . . . and to provide high-contrast background for viewing slides. Easy to clean. See-through cover lets you note progress of slides without interrupting heating process. Cover also vented to prevent fogging. It tilts back for access to entire top; lifts off for easy cleaning. Graduated dial thermometer mounted on front panel instead of warming surface . . . prevents contaminant build-up. Heats from ambient to 40° to 45°C range (commonly used for non-adhesive mounting of sections) in just 15min and to 54°C for dehydrating. Setting adhesives takes 20min. Reaches stable maximum temperature of 60°C in just 25min. Temperature constancy, ±3°C. Uniformity, ±2°C. Straightforward operation. Place slides on warmer. Set thermostatic control. You're free to do other things.

Slide Dispenser

12-592-5

Table model, stainless steel. Holds up to fifty-four 75x25mm slides. One-at-a-time dispensing with single stroke of lever. 76Lx130Wx100mmH. 12-592-520.00

Multiple Slide Holder

8-819

Accommodates 6 slides. Each slide grasped in separate jaw. Slight pressure spreads jaws for easy slide insertion and removal. Phosphor bronze jaws. With easily attached handle to facilitate moving. 8-8199.50

Ordering Information: Gray enamel base structure. 61Lx18Wx8.6cmH.

For 230V 25/60Hz. 12-594-1130.00

12-594

Microtomes

Rotary Microtome
Ideal for
Research Work

Cuts embedded tissue blocks into sections of any thickness from 1 to 50 μ m. Clamp object block into feed mechanism. Set knife angle. Turn knurled knob to desired thickness registered on front feed indicator. Turn crank to move object clamp in up-and-down stroke 5cm in distance. Feed mechanism actuated by inclined plane attachment, entirely independent of up-and-down movement of clamp. Object block meets knife holder which accommodates knives up to 185mm and tilts through 30° angle. Neat, clean sections are cut from block.

Ordering Information: Durable two-tone gray unit with alcohol-proof enamel. Smaller parts chrome-plated. Hinged lid serves as dust cover. Standard ball-and-flange type object clamp. 36Lx22Wx21cmH. With 120mm knife; handle and back for sharpening; can of pike oil. Shipping wt, 48kg (105 lb).
12-6011737.00 (AO820)

Automatic
Clinical
Microtome

Designed for hospital use where speed is important. Specimen sectioning thickness from 5 to 50 μ m thick in 5 μ m intervals. Place sample on holder. Set thickness on indicator. Turn handle at top to move 110mm steel knife. Knife moves in flattened curve. With each stroke, feed mechanism automatically advances specimen. Neat slices produced.

Ordering Information: Black wrinkle enamel structure with chromium-plated parts. Feed mechanism consists of ratchet wheel keyed to vertical feed screw. Drip pan, table clamp, 110mm knife back, handle, and can of pike oil.
12-618558.00 (AO880)

Table
Microtome for
Classrooms

For applications where hand-operated feed is sufficient and speed is not essential. Sections from 5 to 500 μ m can be cut using straight-edge razor or microtome knife. Place sample in object holder which rests on top of micrometer-type feed screw. Turn lower disc to move sample to desired thickness. Move knife manually over two horizontal glass plates, 98Lx11mmW.

Ordering Information: Black wrinkle enamel finish with chromium-plated parts. With object clamp to hold specimens up to 29mm. Mounted on fiber or wood blocks. Without knives.

Cryo-Cut Microtome System

For fast, routine sectioning

Cryo-Cut produces rapid routine sectioning of frozen embedded specimens. Consists of rotary microtome, refrigerated cabinet, anti-roll guide, knife holder, heat extractor, and knife.

Set cryostat refrigerated cabinet temperature from $+10^{\circ}$ to -30°C . Place prepared sample on copper shelf. High thermal conductivity provides rapid heat removal from specimen in 30 seconds. Place frozen specimen in object clamp of microtome. Set desired thickness from 2 to $40\mu\text{m}$ in $2\mu\text{m}$ increments. Turn large handwheel on side of cabinet to cut sections. Sections feed through anti-roll guide to assure uncurled sections. When object clamp reaches forward position, feed mechanism ceases to function.

Stainless-steel cabinet with deep recessed design for plenty of leg room. Spacious 46cm microtome well for elbow room. Sliding heated

glass door eliminates frost, ice build-up, water dropping, condensation. Additional cooling coil in chamber walls reduces temperature to optimum freezing range. Built-in storage rack in cold chamber. Automated 24hr defrosting. Cutting and temperature controls located outside cabinet. Knife adjustment, blade repositioning, and feed controls located on microtome. Fluorescent light, 4 heavy-duty casters, wheel safety lock.

Ordering Information: With 120mm knife, knife holder, 3 object discs, slide tray, 12-625-1 special lubricant. 73Lx61Wx96cmH. 115V 60Hz. UL listed.

Model CTD Microtome/Cryostat

Model CTD Compact Microtome/Cryostat provides economical means of producing large or small uniform sections of tissue with high quality of cytologic detailing. Sections from 2 to $42\mu\text{m}$ in $2\mu\text{m}$ subdivisions.

Place freshly collected tissue on specimen holder, mounted in microtome. Select temperature from ambient to -30°C within $\pm 1^{\circ}\text{C}$ on polar zone cold control. Tissue is frozen by means of quick-freeze block incorporated in cold chamber. Select thickness. Cut specimen. As specimen is cut, anti-roll plate holds section flat against knife preventing curling. Section picked up from blade by adhering to slide or cover glass attached to suction cup.

Ordering Information: Bench-high, mechanically refrigerated cabinet with Minot Custom Microtome mounted in cold chamber. Thermal insulated transparent plastic cover with anti-fog control to eliminate condensation problems. Sealed 1/8hp compressor, temperature-indicating

device, 4 casters. Quick-freeze timer for 0-3min settings. Cabinet: 64Lx43Wx93cmH. Cold Chamber: 31Lx41Wx31cmH. 22mm dia drain. With 120mm knife, detachable specimen holder, 3 specimen holder plates, 3/4 oz (22ml) bottle of oil. Shipping wt 109kg (240 lb). 115V 60Hz.

12-625-503300.00

Accessories

Anti-Roll Attachment. For 12-625-50 and 12-625-40 (p 835) microtome. Consists of stainless-steel frame and clear plastic anti-roll plate. Plate rotated away from blade for access to tissue sample.
12-625-1077.90
 (IEC 3375)

Microtome Knife. For 12-625-50 and 12-625-40 (p 835) microtome. For both frozen and paraffin sectioning. Forged from tempered steel. Straight side wedge L, 120mm. In wooden storage box
12-625-6967.40
 (IEC 3257)

Minotome™ Frost-Free Microtome/Cryostat

Eliminates defrosting chores

Uses automatic preventive defrosting refrigeration techniques to eliminate moisture condensing and freezing on sliding surfaces of microtome. You don't have to worry about remembering to defrost or about needless periodic defrost cycling. Automatically adjusts to workload and ambient humidity conditions. Rapid defrost won't increase microtome temperature more than 4°C.

Place prepared tissue on specimen holder mounted in microtome. Select temperature from ambient to -28°C. Set quick-freeze timer from 0 to 5min. Tissue is frozen on holder by quick-freeze block which has space for 15 specimens. Select thickness from 2 to 42µm in 2µm subdivisions. Cut specimen. As specimen is cut, anti-roll plate holds section flat against knife preventing curling. Section picked up from blade by adhering to slide or cover glass attached to suction cup.

Ordering Information: Contemporary two-tone cabinet with Minot Custom Microtome mounted in cold chamber. Quick-freeze timer and indicator override normal cycling of compressor for rapid specimen freezing. Large transparent window anti-fog system, simple operating controls. Direct coupled operating wheel gives exact cutting action. Forced air refrigeration system reduces time needed to reach operating temperature. 1/3hp compressor, 4 casters with front lock, sealed drain. With 120mm knife, detachable specimen holder, 3 specimen holder plates, 3/4 oz (22ml) bottle of oil.

For 115V 60Hz.

Tissue-Tek® Microtome Cryostat

"Human-engineered" for convenient, fast operation

Combines tissue cutting tool and refrigerated cabinet to provide simplicity and convenience in tissue sectioning. Simple controls and devices for freezing, positioning, and securing frozen specimen and for choosing section thickness, cutting section, and keeping cut sections flat for mounting.

Adjust microtome blade. Place prepared specimen block on freeze bar. Freeze from -30° to -60°C by using 12-625-105 quick-freeze attachment. Lock specimen block in chuck. Position knife blade to chuck. Set thickness from 2 to 20µm in 2µm increments. Position anti-roll device. Turn handwheel to cut sections. Place sections on slide after cutting.

Ordering Information: Compact cabinet on 4 casters. Self-contained heat coils and blower for simplified defrosting. Removable microtome with bail-and-plate type anti-roll device. Sliding window. Front controls include thermometer, thermostat, timer, operating lights, dry switch, freeze-heat switch. 65Lx67Wx112cmH. With microtome knife, 6 object holders, 4 oz (118ml) bottle embedding compound, oil, and grease. Net wt 125kg (276 lb). 115V 60Hz.
12-625-100 3575.00
(Lab-Tek 4550)

CO₂ Quick-Freeze Attachment

Provides quick, efficient reduction of specimen temperature from -30° to -60°C. For both 12-625-100 and 12-625-110 microtomes. Simply mount attachment to any siphon CO₂ tank. Clamp object holder into chamber. Open tank valve. Biscuit of dry ice generated in seconds. Used for preparing tissue that contains high proportion of fat to water and other soft materials.

12-625-10580.00
(Lab-Tek 4570)

12-625-100

Microtome/Cryostat

Features frost-free window and working area

Convenient while freezing and cutting frozen tissue sections. Finds many applications in surgical pathology, research, industries, schools.

Place knife in microtome. Adjust cutting angle. Refrigerate cabinet. Mount specimen with embedding compound. Specimen can be mounted on metal object holder and frozen on freeze bar or placed in Cryomold™ specimen mold and inserted in freeze well on Cryobar. After specimen is frozen, lock block in chuck. Position knife blade to chuck. Face off tissue using gross adjustment wheel. Set thickness from 2 to 20μm in 2μm increments. Engage automatic feed. Turn handwheel to cut section. Place section on slide after cutting for staining.

Ordering Information: Hermetically sealed refrigeration unit including compressor and sealed refrigerant line. Removable microtome with bail and plate type anti-roll device. Glare-free illumination, 4 casters, drain pan. Temperature indicator shows temperature at knife level of microtome. Automatic defrosting every 24hr at presettable time. Uses Cryomold® Specimen Molds. Supplied with microtome knife, 100 Cryomold (12-625-112), 4 oz (118ml) bottle embedding compound, oil, and grease.

115V 60Hz. Shp wt, 128kg (282 lb).

Tissue-Tek® II Microtome Knife Sharpener

Automatically sharpens dull microtome knives to razor-like cutting sharpness. Two honing plates provide a different sharpening surface for each knife edge.

Efficient, safe operation. Lock knife in holder. Squeeze small amount of coarse abrasive on both honing plates. Close transparent Plexiglas™ cover. Set timer from 1 to 60 minutes or for continuous operation. Blade holder delivers knife to honing plate at correct angle to ensure proper bevel. Knife edge stroked against first honing plate eight times. Rotation gear flips knife over on other edge to repeat action on second honing plate. Lift action after each 8-stroke sequence prevents knife edge from rolling and redistributes abrasive mixture. Repeat entire process using fine abrasive on honing plates to give knife smooth cutting edges.

Ordering Information: Cast-aluminum housing with Plexiglas dust cover. With one bottle fine abrasive, one bottle coarse abrasive, glass plate reconditioner, and 2 glass honing plates. 115V 60Hz.

12-643-751175.00
(Lab-Tek 4645)

Automatic Microtome Knife Sharpener

Provides precise, efficient safe method for honing microtome knives up to 185mm long. Both economical and time-saving.

Lock knife in knife holder. Squeeze small amount of abrasive on hone plate. Close transparent Plexiglas cover. Set timer. Switch on. Hone table oscillates 19mm from side to side. Knife stroked against oscillating glass honing plate. After 3 strokes on side of knife edge, cam automatically flips knife over to other side. When time elapses, knife holder stops aloft in horizontal axis.

Mounted on rubber feet. Finished in baked epoxy enamel. With 2 bottles of coarse abrasive, 2 bottles of fine abrasive, 2 bottles hone glass compound, 2 glass hone plates, knife inspection block, redressing frame. 51Lx34Wx43cmH. UL listed.

Mixers

Mixes Solids or Liquids

12-811

Fisher-Kendall Mixer guarantees rapid, efficient intermixing of solids and solids, solids and liquids, or liquids and liquids. Consists of 1725rpm enclosed motor, geared down to 57rpm, for rotating two extending arms with U-shaped holders at 180° angle.

One or two samples can be mixed at the same time. Container — up to 22cm high and 10cm in dia — is placed in holder and securely

gripped at top, bottom, and side by three adjustable clamps. When switch is thrown, sample is slid, thrown back and forth from top to bottom, and rolled over and over.

Ordering Information: Cast-iron housing finished in dark green enamel. Mounted on rubber feet. Shipping wt 20kg (44 lb). Without jars. 115V 50/60Hz.

12-811400.00

Test Tube Mixer

Vortex-Genie® Mixer provides thorough mixing for test tubes from micro to 40mm; for centrifuge tubes of all sizes; for small Florence or Erlenmeyer flasks; for volumetric flasks up to 1000ml; for square or specially shaped tubes; for colorimeter or spectrophotometer cuvettes.

Contents in any container are mixed in a split second. Set speed on variable control. Touch container to neoprene cup on top of mixer. Containers need not be capped unless they are more than half filled. As cup oscillates, the liquid in the container also oscillates. Angle of contact, degree of pressure can be varied for best mixing action.

Ordering Information: Heavy cast-iron case with sponge-rubber feet. 13Lx16Wx23cmH. Shipping wt 4.5kg (10 lb) 115V 60Hz.

14-062

Adams Nutator™ provides gentle mixing or resuspension of blood samples, controls, and specimens in 30 seconds. Useful for hematology, chemistry, research, and bacteriology labs.

Accommodates up to fifteen 7, 10, or 15ml Vacutainer® blood collection tubes, 24 pediatric Vacutainer tubes, 16 Unopette® disposable diluting serum bottles, or number of other containers.

Containers are placed on rubber dimple pad on top of mixing tray.

Pad holds all containers firmly in any direction in between rows of rubber prongs. Permits quick placement and removal of any container.

Ordering Information:

Lightweight durable aluminum mixer. Permanently lubricated. Easy to clean and maintain. 13Lx24Wx14cmH. Net wt, 907g. With one rubber dimple pad. 115V 60Hz.

14-06293.00
(Clay Adams 1105)

Thermolyne Maxi-Mix

Test tube mixer for vortex mixing in the lab. Mixing action is varied by merely changing the pressure of the container against the foam rubber top. Greater pressure produces more intense mixing action. UL listed.

Ordering Information: Compact construction with 10cm dia top 14Lx10cmW. Top-mounted on-off switch, suction feet, ball-bearing drive. With 12-814-1 foam rubber top. Net wt 1.4kg (3 lb), shipping wt 1.8kg (4 lb). 120V 60Hz.

12-81485.50
(Thermolyne M-16715)

Replacement top for 12-814 mixer. Foam rubber top protects against breakage and prevents damage from spills.

12-814-12.50

12-814

Fisher-Hirschfelder-Taylor Atom Model Kits

Show actual space relationship

Scaled 100,000,000 to 1

Fisher-Hirschfelder-Taylor Kits consist of nearly 90 plastic atom models and 100 brass connectors and connector lifter in sturdy case. Each element is represented by distinctive color. One centimeter closely approximates one angstrom in the natural atom (about 100,000,000 enlargement).

"Synthesized" molecules show quite accurate size, bond angles and internuclear distances. Approximate molecular size can be determined with meter stick. Special snap fasteners facilitate construction of complex models. Hold atoms firm, yet allow free rotation.

Atom shapes, faces, sizes, and angles are based on electron diffraction studies. Conforms to work of Pauling and Brockway (*J.A.C.S.*, 59:1223).

Developed through cooperative effort of Dr. Joseph O. Hirschfelder, University of Wisconsin, Dr. Hugh S. Taylor of Princeton University, and Fisher Developmental Laboratories.

Available in organic and metal-coordination kits.

Organic Atom Model Kit

Build unlimited number of organic compounds. Various covalent bonding states are achievable using multiple atoms.

Kit consists of following:

Quantity	Type	Atom	Form	Color
8	C-1	Carbon	Paraffinic	Black
6	C-2	Carbon	Olefinic	Black
4	C-3	Carbon	Acetylenic	Black
12	C-4	Carbon	Aromatic	Black
2	C-5	Carbon	Heterocyclic	Black
16	H-1	Hydrogen	----	Orange
6	O-1	Oxygen	Ether	Light Blue
6	O-2	Oxygen	Carbonyl	Light Blue
4	N-1	Nitrogen	Amino	Dark Blue
2	N-2	Nitrogen	Imide	Dark Blue
2	N-3	Nitrogen	Cyanide	Dark Blue
2	N-4	Nitrogen	Nitrate	Dark Blue
2	N-5	Nitrogen	Isonitrile	Dark Blue
2	S-1	Sulfur	Sulfide—	Yellow
2	S-2	Sulfur	Sulfide=	Yellow
2	S-3	Sulfur	Sulfate	Yellow
4	Cl-1	Chlorine	----	Green
2	Br-1	Bromine	----	Tan
2	I-1	Iodine	----	Brown

100 Atom Connectors

1 Connector Lifter

Hinged, compartmented case with identifying chart printed inside lid.

12-821 160.00

Metal-Coordination Model Kit

Construction of hydrated ions, complex metal, and chelate coordination compounds. Also groups, molecules, or ions that illustrate geometric, optical, cis-trans, or hydrate isomers.

Coordination bonding as well as covalent bonding atoms are furnished. In coordination bonding both shared electrons are furnished by one atom. In covalent bonding, each atom contributes mutually.

Kit consists of following:

Quantity	Type	Atom	Form	Color
28	H-1	Hydrogen	----	Orange
8	C-1	Carbon	Paraffinic	Black
6	C-2	Carbon	Olefinic	Black
10	C-4	Carbon	Aromatic	Black
3	O-1	Oxygen	Ether	Light Blue
3	O-2	Oxygen	Carbonyl	Light Blue
6	O-3	Coordination Oxygen	Hydrate	Light Blue
3	O-4	Coordination Oxygen	Carbonyl	Light Blue
8	N-6	Quaternary Nitrogen	----	Dark Blue
4	N-7	Coordination Nitrogen	Oxime	Dark Blue
2	N-8	Coordination Nitrogen	Pyridine	Dark Blue
2	Cl-1	Chlorine	----	Green
2	Br-1	Bromine	----	Tan
2	M-1	Coordination Metal	Cobalt	Metallic

100 Atom Connectors

1 Connector Lifter

Hinged, compartmented case with identifying chart printed inside lid.

12-822 160.00

Individual Atom Models

Extra atom models enable user to make larger and more complex molecules. For 12-821 and 12-822 kits.

To your health

ONE PICTURE may be worth a thousand words. This new **wall chart** gives you 25 pictures. Covering basic safety instructions as to safety glasses, fire extinguishers, safety showers, clothing fires, eye emergencies, lab dress, handling & carrying reagents and equipment, reagent spills, disposal techniques, unauthorized experiments, fume hoods, gloves, safe handling of glassware, artificial respiration, chemical labeling, and gas cylinders. Ideal for students, new lab personnel.

LABORATORY SAFETY chart measures a generous 122Hx 76cmW. In full color. With metal mounts top and bottom for easy hanging. Catalog no. 10-027-10. The price: \$13.85.

12-825-6

Scale Atom™ III Set

Large enough for building amino acids, terpene, steroid, and alkaloid molecules

Consists of color-coded bowls and corresponding caps. Bowls have bonding peg which connects to cap to form atom or join another bowl to form molecule. Caps also terminate molecular chain. Locking pins strengthen large molecules. Square and round peg design makes it difficult to join atoms which do not belong together.

Set includes assembly instructions, visual aids for teachers, and following units:

Quantity	Atom	Type	Color
30	Carbon	Single Bond	Black
20	Carbon	Multiple Bond with Square Peg	Grey
10	Carbon	Multiple Bond with Round Peg	Grey
10	Carbon	Two Pegs	Black
10	Carbon	Universal	Grey
30	Oxygen	Single Bond	Red
20	Oxygen	Double Bond	Light Red
10	Oxygen	Two Pegs	Red
10	Nitrogen	Tetrahedron	Blue
15	Nitrogen	Planar	Blue
10	Nitrogen	Two Pegs	Blue
10	Nitrogen	Universal	Blue
8	Sulfur		Yellow
8	Phosphorus		Light Brown
6	Chlorine		Green
6	Bromine		Dark Brown
80	Hydrogen		White
31	Caps for terminating molecular chain		
3	Caps for building molecular hydrogen		
100	Locking pins for strengthening large molecules		

Radius of all bowls except hydrogen is 17mm. Hydrogen is 12mm
12-825-6 175.00

12-826

Dreiding Stereomodels Kit

For stereo-chemical studies

Consists of rods and tubes soldered together at point that represents an atomic nucleus. Tube or rod represents sigma bond. Their length is proportional (0.4Å/cm) to internuclear distances. Free ends represent nuclei of hydrogen atoms. Each unit represents simplest member of homologous series (CH₄, H₂O, NH₃).

Pushbutton mechanism firmly holds units at desired internuclear distance, without hindering free rotation. Non-rotating bonding is represented by soldered rod and tube. Benzene and polycyclic aromatics are constructed from special aromatic double-bond units.

Set consists of following color-coded units:

Quantity	Model	Bond Type	Color
50	C ₄	Tetracarbon	Black
5	C=C	Isolated Double Bond	1 White Band
5	C=Ccon	Conjugated Double Bond	2 White Bands
9	C=Car	Aromatic Double Bond	None
5	C=O	Carbonyl Group	Black, Red
5	O ₂	Divalent Oxygen	Red
5	N ₃	Tri-Valent Nitrogen	Blue
2	C≡C	Triple Bond Carbon	Black

In hinged, compartmented case

Set 169.00

Molecular Model Building System

Large demonstrator model plus student-research models

12-816

While the teacher builds a demonstration-size model for the classroom with the Orbit Model System, up to 5 students can assemble smaller molecular models with just one Minit Model System at their desks.

Systems consists of 2 basic parts: atom centers and bonds. Atoms are color-coded centers with prongs set at correct bond angles. Centers are molded into 15 different bond configurations. Bonds are made from plastic straws, which attach directly to prongs of atom centers. No preparation needed — students can start building at once. Parts easily disassembled.

Each system comes with approximately 40 pages of instructions to encourage independent learning.

Orbit Model Building System

Demonstration-size molecular model system for the teacher. Wide assortment of 1200 atom centers and bonds. All structures men-

tioned in the 3 Minit System workbooklets can be built with this set. Storage container for all atom centers and bonds. With instructions.

12-819.....79.80

Minit Model Building Systems

Student-research model system for high school to graduate studies. Available in three separate sets: Organic/Inorganic Chemistry, Biochemistry, and Lattice Structure Models.

Minit Organic/Inorganic Chemistry Models. Selection of 1510 atom centers with over 3000 pre-cut bonds. With 45-page workbooklet covering principles of molecular shape, saturated hydrocarbons, unsaturated hydrocarbons, cyclic hydrocarbons, functional groups in organic chemistry, benzene and its derivatives, polymerization, optical isomerism, simple organic molecules, complex ions, atomic orbitals, and pi-bonds.

12-816.....69.85

Minit Biochemistry Models. Construct amino acids, heterocyclic rings, and other sections of macro-molecules with this kit's 1420 atom centers and 3000 pre-cut bonds. With 35-page booklet covering sub-units (amino acids, monosaccharides, furanose and pyranose rings, glycerols, fatty acids, and steroids, organic bases), linked sub-units (peptides, disaccharides, lipids, nucleosides, nucleotides), complex molecules, proteins, polysaccharides, RNA, and DNA.

12-817.....69.85

Minit Lattice Structures. Contains 1350 atom centers and 3000 pre-cut bonds. Its 8- and 12-coordinated atom centers allow constructing metals and other high coordination lattices. With 35-page booklet covering seven crystal systems, forms of carbon-diamond-graphite, metals, sodium, zinc blende and wurtzite, coordinated structures, rutile, ice, layer constructions.

12-818.....69.85

Fisher Scientific Company

Osmette Osmometers

Three models for fast, accurate molecular weight determinations

Osmette Model 2007

With research-level accuracy

With 2ml sample, for example, accuracy is ± 1 mOsm/kg for concentrations below 1000 mOsm/kg, $\pm 0.2\%$ above 1000. With 0.2ml sample, accuracy is ± 0.2 mOsm/kg below 500 mOsm/kg, $\pm 0.5\%$ above 500. Performs molecular weights up to 20,000 mOsm/kg.

Highly efficient refrigeration system cools bath to operating temperature in 10 or 15 min. At least $\frac{1}{2}$ hour faster pull-down than competitive instruments. Temperature constancy is maintained to within $\pm 0.2^\circ\text{C}$. Convenient leveling device prevents overflow of bath medium.

Calibration and testing are simple. By freezing two standard salt solutions and adjusting indepen-

dent controls, you achieve two-point calibration. Calibration of meter permits direct reading in milliosmols.

To use null-balance capability, readings are zeroed on 13cm mirror-scale, using digital counter dial. Then for rapid screening applications, merely insert one sample after another, and press "Direct" button. Direct readings appear on meter.

Ordering Information: With 24 sample tubes, spare stirring wires, 2 bottles of salt standard, test tube rack, and spare temperature probe. 41Lx38Wx23cmH. 115V 50/60Hz.

12-827-11795.00

12-827-1

Osmette Model S

Semi-automatic, digital readout

Measures pressure with same high accuracy and cools to operating temperature as quickly as 12-827-1 Osmette. Maintains sample bath temperature within $\pm 0.1^\circ\text{C}$. Automatically adjusts to changes in concentration. Controls air temperature during sample isolation. Determines freezing point plateau electronically. Displays concentration data on digital readout.

Ordering Information: Has 24 sample tubes (2ml); 12 sample tubes (0.2ml); spare stirring wires; 250ml each of 100-mOsm and 500-mOsm salt standards, and bath fluid; test tube rack and spare temperature probe. 35Lx20W x25cmH. 115V 50/60Hz.

12-827-32195.00

12-827-3

Osmette Model A

Fully automatic, nixie-tube readout

Provides maximum accuracy and reproducibility. Processes 30 to 60 samples per hour. Controls bath temperature to $\pm 0.1^\circ\text{C}$. Completely eliminates variance due to operator freezing techniques. Electronically determines freezing point plateaus. Digital data displayed automatically. Adaptor available for BCD output to link with computer.

Ordering Information: Has 24 sample tubes (2ml); 12 sample tubes (0.2ml); spare stirring wires; 250ml each of 100-mOsm and 500-mOsm salt standards, and bath fluid; test tube rack and spare temperature probe. 35Lx20W x25cmH. 115V 50/60Hz.

Freezing Point Depression Apparatus

For molecular weight determinations

Consists of cooling jar (13 dia x18cmH) with clamp-down lid. Air jacket tube passes through hole in lid (secured by rubber stopper). Freezing point tube (with side tube for introducing pellets) supported in air jacket tube by stopper. Nickel-plated metal stirrer to keep bath temperature uniform. Without thermometers or platinum stirring rod for freezing chamber. Performs technique described in *Experimental Physical Chemistry* by Farrington Daniels, J.H. Mathews, and J.W. Williams. For Beckmann thermometer, see 15-061 (p 1165). For cooling thermometer, see 14-983-10B (p 1159).

12-82959.00

Molecular Weight Apparatus

Molecular weights from boiling point data

Permits determination of molecular weights by boiling point method. Also performs maximum/minimum boiling point studies, vapor pressure measurements, and constant temperature studies. Procedures described in *Experimental Physical Chemistry* by Daniels, Mathews, and Williams.

Cottrell pump brings liquid and vapor into equilibrium. Trap at lower end of Brown condenser permits collection of representative sample of vapor phase any time during equilibrium conditions. Sample easy to remove for analysis. Apparatus supplied with shockproof condenser, but without thermometer. For Beckmann thermometer, see No. 15-060 (p 1165).

Three Compact Models

21-130

21-131-5

With 6 Heaters and 6-Port Manifold

Individual electric heaters with adjustable controls. Each 200-watt heater consists of tubular heater element and stainless-steel cup. Recessed into top insulating board. Accommodate 30 and 100ml flasks. 6-port glass manifold exhausts fumes. With serrated connector for water aspirator. Well-ventilated to prevent heat accumulation. Maronite® Board protects wiring and

rheostats. 115VAC. 23Lx 56Wx36cmH to top of manifold. Heavy-gauge epoxy-coated aluminum cabinet with black plastic endcaps.
21-131-5 325.00

Manifold

For use with 21-129, 21-130, and 21-131-5. Glass.
21-130B 66.10

Micro Kjeldahl Distillation Units . . . Three Versatile Units

With Replaceable Glassware

Determines nitrogen in small samples. Micro distilling unit includes flask with evacuated jacket (which precludes need for burner). 40mm dia pear-shaped funnel with stopcock for filling flask. Silver micro condenser tube. Borosilicate micro condenser jacket. 125ml PYREX® brand receiving flask; and vapor vessel with stopcock for separating liquid from vapor. 91cm of 4.8mm rubber hose. Complete set of clamps and support. 1000ml ring-neck flask (10-065C, see p 329). 250 μ l pipet (21-206, see p 976). No. 7 stopper (14-135L, see p 1132).

21-101227.50

Silver Micro Condenser Tube

Type recommended by Ivor Bang and Pregl as most efficient in micro Kjeldahl work. For use with 21-101.

21-110127.00

Vapor Vessel

With stopcock.

21-12027.50

Receiving Flask

PYREX brand. 125ml. Replaces flask supplied with 21-101.

10-040DPk of 12/9.60

Case of 48/34.56

(Coming 4980)

21-101

Kemmerer-Hallett Distillation Unit

Micro distillation apparatus uses digestion flasks. No need to transfer digestion product. Just connect 21-151 flask to upper section of unit at joint for leakproof fit. Unit is type originally designed by Kemmerer and Hallett of Wisconsin University, and modified according to suggestions by Dr. R. W. Luecke of Michigan State University. With one flask.

21-150120.00

Digestion/Distillation Flask

150ml. Made of shockproof borosilicate glass. For use with 21-150. 198mmH. 29/42 $\frac{1}{2}$ joint.

21-1519.50

Apparatus for Nitrogen Determinations

Kjeldahl Distillation Unit

13-145

For table or wall mounting

Accommodates six 500 or 800ml Kjeldahl flasks. Individual "off-on" heat control for each flask. Heaters are 550-watt with nickel-chromium elements. Cooling tank is stainless steel. Condenser tubes are pure block tin for uniform distillation. 43Lx102Wx102cmH. 120VAC or DC. Shipping wt, 70kg (155 lb).

13-145945.00

Portable Kjeldahl Distillation Unit

Easy to set up, move, and disassemble

Ideal for labs that want to use a single unit for nitrogen as well as other distillations. Two 550-watt nichrome-wound heaters with reversible refractories accommodate various size flasks. Heating unit removable for general lab work. Condenser tubes are pure block tin, reinforced top and bottom with brass sleeves. Mounted in brass jackets with water inlet and outlet. Supports for receiving vessels adjustable for height. 115VAC or DC. 36Lx31Wx91cmH. Shipping wt, 21.8 kg (48 lb). Without glassware.

13-157565.00

Steam Distillation Unit

21-150

Determines nitrogen up to $10\mu\text{g}$, $\pm 10\%$. Ideal recovery range 1.15mg to 1.5mg. Equals recovery range of Pregl techniques, ASTM Committee on Micro Chemical Apparatus, Kirk, AOAC, and others.

Compact one-piece borosilicate glass unit with chemically inert Teflon® stopcocks. Mounted on durable, corrosion-resistant plastic console.

Operation is simple and fast. Electric immersion heater provides efficient, quick steam heat. One distillation takes 5 to 7 min. Unit can be run almost continuously because it maintains full head of steam during sample change. Built-in glass aspirator permits purging of spent sample. Unit can be used for steam distillations other than Kjeldahl.

Size, 25Lx36Wx53cmH. 115V AC. Shipping wt, 10kg (22 lb).

21-131-10635.00

21-131-10

13-157

Portable Kjeldahl Digestion Unit

Provides fumeless operation

Fumes are safely drawn into water stream and dissolved. Polyethylene filter pump connected to manifold applies even suction on both ducts. Manifold of tellurium lead resists corrosion for long service. Two 550-watt heaters with individual control switches provide fast, even heat. Reversible refractories handle 500 or 800ml flasks. 51Lx 25Wx41cmH. 115VAC or DC. Without glassware. Shipping wt, 21.8kg (48 lb).

13-158545.00

13-158

Kjeldahl Digestion Unit

13-120

With 6 electric heaters

Holds 6 flasks of either 500, 650, or 800ml capacity. 500-watt heater has ceramic flask supports contoured to base of flask for fast, equal heat distribution. Infinite heat control regulates electrical input for each heater from 20 to 100% of electrical capacity.

Blower fume exhaust system. Fumes pass from ceramic duct through plastic manifold to blower at left end of unit. Exhaust capacity adjustable for number of flasks. PVC drain in fume pipe and rubber hose drain in blower housing. 230V 60Hz.

13-120A1350.00

Kjeldahl Distillation Unit

13-118-10

Distills ammonia from digested samples

Manifold assembly holds 6 flasks; one-piece welded aluminum construction assures optimum heat dissipation and uniform condensing. Condensing tubes have leakproof seal on top and bottom. Thermo-siphon circulation system with controlled back pressure provides uniform distillation rate.

Heating system with infinite heat control operates same as in 13-120A digestion unit. Heater rack may be raised or lowered to accommodate various size flasks. Thermometer dial indicates distillation cooling water temperature. Mounts on table or cabinet. 230V 60Hz.

13-118-101030.00

Combination Digestion and Distillation Units

13-120-50

For 6 or 12 Kjeldahl flasks

Distillation unit mounted over digestion unit. Same electrical heating system (with infinite heat control) and blower fume exhaust system as described for 13-120A and 13-118-10 units. Choice of 6 or 12 flask capac, 230V 60Hz.

Capac	Cat. No.	Ea
6 units	13-120-50A	2175.00
12	13-120-50B	3325.00

With water ejector fume exhaust

Same as 13-120-50 except for fume disposal system. Fumes pass from ceramic ducts into plastic manifold to water aspirator. They are then condensed and diluted by water spray and carried down drain. Six flask capacity only. 230V 60Hz.

13-120-552175.00

Flow Indicator Monitors Cooling Water Flow

Handy Flow Indicator connects easily to water lines in distillation or similar apparatus set-up. Bright red ball rotates around circular channel as soon as flow begins. Ball's rotation speed is constant visual indication of velocity of water flow. A necessity in regulating flow in apparatus where water flow is not otherwise observable. Cuts down on water waste, too.

Tough plastic construction. Clear as glass. Compact, 39x57x19mm. Two tube extensions accept 6 to 10mm ID tubing.

11-164-40Bag of 2/7.00

Inexpensive Kjeldahl Digestion Unit

13-115-2

Holds six 500 or 800ml flasks

Adjustable supports accommodate six 500 or 800ml flasks, but supplied without flasks and fume manifold. Entire device can be placed in fumehood. Adjustable feet position unit 22 to 28cm above tabletop. Reversible porcelain refractory (13-156) for each burner. 23Lx81Wx58cm to top of flask support 115V AC or DC, 3.3kw. Shipping wt, 20.4kg (45 lb).

13-115-2445.00

Replacement Porcelain Refractories

For those in 13-115-2. Reversible to fit various size flasks.

13-156Ea/3.50
Pk of 6/21.00

Replacement Heating Elements

For use in 13-115-2 and 13-145. Coiled nickel-chromium.

Isotemp® Ovens Set New Design and Performance Standards

Seven Models Described on Next Three Pages Are Equipped with These Outstanding Features:

- Chest high chamber facilitates sample handling
- Side-mounted control panel puts controls within normal reach
- Adjustable leveling feet
- Accessory wall-mounting bracket conserves bench space
- Attractive parchment yellow cabinet accented with black trim and wood-grain vinyl
- Baked-on enamel finish resists chemical blemishes

Calibrated or Arbitrary Temperature Control

Five models have direct-reading temperature controls that require no calibration. Temperatures are selected on digital or calibrated control dials. Two models feature thermostatically controlled temperatures selected on arbitrary control dials. Settings can be constantly compared to thermometer indications when adjusting or checking set points.

Stainless-Steel Insulated Chamber

Interior wipes clean — resists contamination and corrosion from chemically-active vapors. Spot-welded construction assures long service life. Two-inch fiberglass insulation contains and dissipates heat to maintain thermal equilibrium without loss of efficiency.

No-Tip Shelves

Glide effortlessly on vertically-mounted, chromium-plated steel rod racks. Easily support heavy loads and prevent sample spillage. Crosspieces spaced at 25mm intervals so shelves can be adjusted to accommodate short or tall containers. Open rack construction facilitates airflow. Extra shelves available as accessories.

Full-Height Door Grip

Doors open easily, won't pop open at high temperatures. Positive, spring-loaded mechanical latch holds door firmly against chamber seal. Just pull on full-height door grip to open, push door shut to re-latch. Simple screw adjustments maintain proper tension on hinges and latch, assuring a tight fit over years of use.

Accessory Half Shelf

Offers new convenience and flexibility. Enables handling short and tall vessels simultaneously. Available for all oven models.

Gravity Convection Oven

Features temperature selection dial
40° to 250°C range
Safety Sentinel

Excellent performance at low cost. Temperature control dial indicates settings from 40° to 250°C. Simply select desired temperature and fine tune control after temperature stabilizes as indicated by cycling of white heat lamp. No need to correlate dial positions with thermometer indications. System will respond to less than 1/2°C temperature change, limiting overshoot and ensuring efficient operation. Back-lighted temperature control dial also serves as pilot lamp. Thermometer indicates temperatures from 40° to 320°C in 1° increments.

Dual thermostatic Safety Sentinel guards against overheating that would damage oven contents. Safety thermostat automatically tracks control thermostat setting at higher temperature and regulates system if control thermostat malfunctions. Red safety lamp indicates oven is operating under emergency control.

Three models available (see chart at right). Each model includes 13-244-130 thermometer and 2 shelves; 13-244-62 shelf for Model 175, 13-244-63 shelf for Model 301, 13-244-61 shelf for Model 501.

†Plus door overhang of 5cm.

Specifications For 13-244 Series Ovens (Gravity Convection)

Temperature range	40° to 250°C
Accuracy¹	±5.0°C
Reproducibility	±5.0°C
Resolution	2.5°C
Control sensitivity	<±0.5°C
Uniformity²	<±5.0°C
Recovery³	<25 min

¹Relative to true temperature.
²Average deviation from average temperature based upon measuring points at geometric center and each corner with ovens at 200°C.
³Door open 1min with ovens at 200°C.

Gravity Convection Airflow

Depending on chamber size, 2, 4, or 5 air inlet ports are positioned underneath cabinet to assure adequate ventilation. Air from these ports passes directly up through horizontally-mounted, closely-spaced heaters into chamber. Buoyancy of heated air forms vertical circulation pattern that uniformly heats all samples. Stale air and dissipated fumes and odors are exhausted through adjustable top port.

Forced Convection Oven

Digital temperature selection 40° to 300°C range

Higher, more uniform temperatures than gravity convection models. Three-digit control allows selection of temperatures to 300° in 1°C increments. Simply "dial in" desired temperature. No further adjustments required. Thermometer graduated in 1° increments from 40° to 320°C.

Proportional temperature control system, with sensitive platinum-resistance sensor located close to heaters, responds to less than $\pm 0.25^\circ\text{C}$ change. Maintains temperature nearer to set point than any other type sensor. Heaters draw less wattage and operate at highest efficiency level. No back-up thermostat is needed; if sensor fails, oven automatically shuts off. Solid-state components and integrated circuit assure safe, economical operation.

White power lamp illuminates when oven is turned on. Red heat lamp illuminates when heaters are energized and extinguishes when temperature set point is reached.

Two models available (see chart at right). Each oven supplied with 13-244-130 thermometer and 2 shelves; 13-244-62 shelf for Model 177 and 13-244-60 shelf for Model 350.

Model No.	Capac	Outside LxWxH†	Inside WxDxH	Amps	Voltage	Shp. Wt. lbs kg	Cat. No.	Ea

Specifications For 13-244 Series Ovens (Forced Convection)

Temperature range	40° to 300°C
Accuracy ¹	$\pm 2.0^\circ\text{C}$
Reproducibility	$\pm 2.0^\circ\text{C}$
Resolution	1.0°C
Control sensitivity	$< \pm 0.25^\circ\text{C}$
Uniformity ²	$< \pm 1.5^\circ\text{C}$
Recovery ³	< 5 min

¹Relative to true temperature.

²Average deviation from average temperature based upon measuring points at geometric center and each corner with ovens at 200°C.

³Door open 1min with ovens at 200°C.

Forced Convection Airflow

Normally high drying rate of forced draft ovens is greatly increased by directing heated air horizontally across surfaces of samples. Adjustable top port admits fresh air that is mixed with heated air and funneled through a U-shaped duct underneath chamber. It is then fanned through side-mounted vents and recirculated. Second adjustable top port exhausts air to atmosphere. Location of heaters expands oven capacity and allows bottom of chamber to serve as extra shelf.

Forced Convection Oven

Arbitrary temperature selection with dual control 40° to 250°C range

For moderate precision testing, this lower cost forced convection oven features arbitrary temperature selection dial and dual thermostatic temperature control system found in gravity convection models.

Select desired temperature setting and fine tune control after temperature stabilizes as indicated by cycling of white heat lamp. System will respond to less than ½°C temperature change, limiting overshoot and ensuring efficient operation. Thermometer indicates temperatures from 40° to 250°C in 1° increments. Dual thermostatic Safety Sentinel guards against overheating that would damage oven contents. Safety thermostat automatically tracks control thermostat setting at higher temperature and regulates system if control thermostat malfunctions. Red safety lamp indicates oven is operating under emergency control.

Two models available. Each model includes 13-244-130 thermometer and 2 shelves; 13-244-62 shelf for Model 176 and 13-244-60 shelf for Model 349.

Stacking Accessory for Isotemp® Ovens

Simply place the heavy-gauge steel stacking accessory on top of one oven. Then mount another oven on top of the accessory.

Each stacking accessory is equipped with a fan for proper ventilation between stacked units. On-Off toggle switch controls fan power; pilot light indicates fan operation. Magnetically latched access door to vents and thermometer of lower unit and leveling feet of upper unit.

Acrylic finish coordinates with Isotemp® color scheme.

Accessory Right-Angled Thermometer

Replaces standard thermometer on bottom oven when stacking accessory is used. Useful also to reduce over-all height to allow placing an oven under a counter. Range: 40° to 320°C.

EconoTemp™ Ovens

General purpose, low cost

Available in 5 models:

**3 gravity convection and
2 forced convection**

All EconoTemp™ Ovens have these features.

Uniform and constant heat. Low wattage heater for economical operation. Low watt density heater elements, so ovens function in "black heat" range. Low watt density assures long element life and trouble-free operation. Chamber surrounded by highly efficient insulation.

Uses minimum counter space because controls are mounted horizontally across bottom of oven. ON/OFF switch is also power indicator light. Red heat light shows when heater is on. Temperature selector dial divided into 20 equal divisions.

Aluminum chamber has good heat transfer characteristics. Three permanently mounted shelf brackets designed for optimal use of oven chamber. One shelf divides chamber into 2 equal compartments; 2 shelves divide chamber into 3 equal compartments. Chamber floor can be used as an additional shelf. Chamber capacity is larger than that of most comparable ovens in the same size range.

Chrome-plated steel shelves are wireform construction to permit free air circulation. One shelf comes with each model. Additional shelves are available.

Positive latch door. Manually-operated handle and mechanical latch secure door against a long-life, silicon-rubber door gasket. Eliminates "pop-open" and "tugging" problems. Handle remains "touch-safe" at all operating temperatures. Door swings open a full 180° for unobstructed access to entire work chamber.

Designed for bench top use. Attractive parchment cabinet with black trim and control panel. Baked-on enamel finish resists chemical blemishes. A thermometer is inserted in the exhaust vent in the top of the oven for temperature readout.

Useful in industrial, governmental, educational, and medical laboratories. For such applications as drying, aging, curing of samples, sterilization, moisture determinations, and testing electrical components.

**(Ordering Information: next 2
pages.)**

EconoTemp™ Gravity Convection Ovens

(Three models)

.04, .08, and .16m³ capacities

Offer good uniformity, even heat distribution, and a steady air supply at budget prices. <0.5°C temperature controller sensitivity.

Ambient air enters heater compartment and passes over low wattage heating element at bottom of oven. Warmed air passes into oven chamber through air holes in the chamber floor. Two rows of air holes are parallel to each of the 4 chamber walls. This design maximizes temperature control and stability. The heated air naturally moves upward, thus warming the oven and exiting the oven through the exhaust vent in the top of the oven.

All models come with one shelf and an instruction manual.

Operating Principles:

Gravity Convection Ovens

Forced Convection Ovens

EconoTemp™ Forced Convection Ovens (Two models)

.04 and .08m³ capacities

Feature better control of air circulation, hence better temperature control and uniformity than the gravity convection models. <0.5°C temperature controller sensitivity.

A blower circulates air contained in oven chamber. Air flows up the 4 chamber walls and is then drawn down through baffling in the floor of the oven chamber into the heater compartment. This air is heated and blown back into oven chamber through air holes in the chamber floor. Two rows of air holes are parallel to each of the 4 chamber walls.

A constant supply of fresh air also enters oven chamber. A fan located on the motor draws ambient air past and through the motor to cool it and into the heater compartment. The air is heated and then circulated throughout the oven. Air is expelled from the oven through the exhaust vent in the top of the oven.

All models come with one shelf and an instruction manual.

Thelco Mechanical and Gravity Convection Ovens

Thermostats in series prevent temperature runaway

If prime thermostat fails, back-up thermostat takes over. Warning light alerts operator of failure. Thermostat responds to $\pm 0.25^{\circ}\text{C}$ change.

Heating elements operate at non-incandescent (black heat) temperature. Practically eliminates element burnout. Glass wool insulation on all 6 sides rules out "hot spots".

Interior is stainless steel with nickel-plated no-tip shelves. Steel exterior in 3-tone char-

coal gray, black, and terra cotta. Positive release magnetic latch allows door to be easily opened without moving oven or jarring contents.

In 4 forced circulation and 3 gravity convection models. Forced circulation models have turbo-blower while gravity models circulate by natural convection principle. All operate on 120V 50/60Hz except 13-255-1C which is 230V 50/60Hz.

Freas[®] Mechanical Convection Ovens

When you see the Freas[®] nameplate, rest assured it's a quality oven. Finest materials and performance. Longest life. They feature:

- (1) "Black heat" heaters. Elements never exceed 50°C above oven operating temperature. Eliminates burnout.

(2) Electronic controller. Solid-state unit. No moving parts to wear out.

(3) Balanced turbo-blower. Blower and $\frac{1}{6}\text{hp}$ motor statically and dynamically balanced as unit. Smooth operation assures longevity.
- (4) Rugged construction. Heavy-gauge steel finished in 2-tone gray baked enamel. All stainless-steel interior. 2 adjustable nickel-plated steel shelves. 8.9cm glass wool insulation on all 6 sides. 3.2mm asbestos heat barrier under outer shell. Maximum temperature, 350°C . Guaranteed uniformity of $\pm 1.1^{\circ}\text{C}$ at 200°C . Control sensitivity of $\pm 0.5^{\circ}\text{C}$. For 120/208/240V 60Hz. In 3 table and 1 floor models.

Blue M Power-O-Matic-70® Ovens

13-258-13

Automatic power control to prevent overshoot

As oven approaches set temperature, power input automatically decreases to prevent overshoot. Input is stabilized and regulated at exact level required to maintain set temperature.

Overtemperature protector automatically shuts down oven in event of control failure.

Temperature maximum, 260°C. Constancy, $\pm 0.4^\circ\text{C}$. Responds to temperature change of $\pm 0.2^\circ\text{C}$.

Memory Ring®, temperature calibrating dial, aids in selecting proper correction factor for any given temperature. When temperature is calibrated and correction factor determined, you can record it on Memory Ring. Next time that temperature is required, correction factor automatically appears on dial to indicate proper control setting.

Stainless-steel interior. Two adjustable shelves. 5cm fiberglass insulation on all 6 sides. Low gradient, long-life heaters. Adjustable intake and exhaust vents. Exterior either stainless steel or attractive blue depending on model. With blower to provide constant horizontal air movement throughout chamber, thermometer, and electrical terminal box. In 5 models. Line cord with small model. **Two types offered:**

Blue M Electric Oven

No heating elements

Safe for use with hazardous materials

Blue M Friction-Aire™ oven operates by air friction principle (patented) that won IR-100 award for its manufacturer. Heat is generated directly within air itself by turbulence and friction as it moves.

Since there is no central heat source, no point in oven can exceed indicated air temperature. No hot or cold spots — air temperature rises evenly in all parts of chamber. Never any danger of temperature runaway — if motor blower system fails, chamber temperature drops automatically. All 3 models

are UL listed for use in Class I, Group D work and areas.

Temperature range, 15°C above ambient to +150°C (302°F). Uniformity, ±0.5°C at 100°C. Control accuracy, ±0.5°C. Drift over 24-hour period at 100°C, ±0.75°C. Set desired temperature on graduated control dial. 89mm dia temperature indicator has °C and °F scale, stainless sensing bulb.

Stainless-steel interior. Double-wall door. Heavy-gauge steel exterior covered with baked-on Formica white enamel finish. 130mm thick compressed Fiberglas insulation. Two stainless-steel rod-type shelves adjustable on 51mm centers. Three models available — all for 208/240/480V 3-phase, 60Hz AC operation.

Thermolyne Oven/Incubator

Gravity convection oven/incubator is an economical appliance for drying and incubating. Heats to 56°C in 9 minutes — uniformity, $\pm 2.5^{\circ}\text{C}$ at 37°C.

Heating element embedded in bottom of chamber in molded ceramic fiber. Quick, even chamber heat. Chamber walls lined with aluminum for easy cleaning.

Easy viewing of content through Plexiglas window. For incubation of light-sensitive bacteria, place dark piece of paper over window. Magnetic latch on door.

Thermometer port on top of oven. Bimetallic thermostat controls temperature from ambient to 140°C ($\pm 1^{\circ}\text{C}$). Cycle light indicates when power applied to heating element.

Isotemp[®] Vacuum Oven

**Maintains 76cm Hg vacuum
... dial-in temperatures**

Constancy and sensitivity $\pm 1.0^{\circ}\text{C}$

**Safety Sentinel prevents
temperature runaway**

**Vacuum loss less than
13mm Hg/day**

**Stainless-steel interior
resists corrosion and
contamination**

**Full-view window
permits continuous monitoring**

High temperature achieved with wrap-around heating elements and 10cm fiberglass insulation. 25cm wide 1000-watt element completely covers top, sides, and bottom of oven chamber.

Safety Sentinel incorporates dual thermostats operating in series. If prime thermostat fails, back-up thermostat takes over. Warning light alerts operator of failure.

0° - 300°C dial thermometer enables operator to reproduce exact requirements. Maintains 76cmHg vacuum with minimal loss.

Separate inlet and outlet connectors/controls enable operator to replace air with inert gas. Minimizes explosion hazard with flammable materials.

Ordering Information: 18-gauge steel cabinet protected by chemically resistant enamel. Yellow accented finish with black and woodgrain vinyl. Low temperature handle.

Capac, 0.018m^3 . Shelf and floor area, 2019cm^2 . Interior: $29\text{D}\times 25\text{W}\times 25\text{cmH}$. Exterior: $45\text{L}\times 46\text{W}\times 58\text{cmH}$. Shp wt 41kg (90 lb).

National Vacuum Ovens

13-262-1

Heating elements attached to chamber wall on 3 sides to provide uniform temperature. Regulated by adjustable thermostat with a range of 35° to 200°C. Vacuum capability to 10 microns with negligible loss over extended period of closed-door operation. Two metering valves provide fine adjustment for vacuum and bleed operation.

Interior chamber of stainless steel. 13mm thick tempered glass window provides excellent visibility. Encased in thick fiberglass insulation. High heat-resistant silicone gaskets standard equipment. Buna-N gaskets also available. 120V 50/60Hz in 3 models. (240V 50/60Hz models available on special request.)

Biological Oxygen Monitor

Dissolved Oxygen Meter

Model 53

Much more sensitive than manometric devices

Measures oxygen uptake and evolution in biological samples at rates from 3 to 300 $\mu\text{l O}_2/\text{hr}$, $\pm 1\%$. Rates recorded in seconds. Tests completed in 2 to 12 minutes, depending on reactant concentration. Instrument measures liquid phase partial pressures to achieve high sensitivity (100 to 200 times that of manometric systems).

It can print out a permanent record of your experiments on 100mV recorder (Model 53 has special outlet to accommodate recorder). Or, present data on a meter. Recordings are faster than taking readings and manually plotting a graph. More accurate too, and they provide continuity of measurement for observing changes in percent saturation.

A highly responsive, Clark-type, membrane-covered polarographic electrode (13-298-5) is the detector. Maintained in stable, well-controlled environment.

The stable environment is provided by an efficient Bath-Stirrer Assembly (13-298-3) which controls temperature to $\pm 0.01^\circ\text{C}$, and maintains necessary flow rate past electrode.

Measurements of percent O_2 register on the Model 53 Oxygen Meter (13-298-1) which operates on two ranges. One for air at 760mm pressure and one for O_2 at 760mm. Meter has built-in probe selector and integral "test" setting

to check operation of the electrodes.

Apparatus is simple to operate. A sample (size, 1ml or 50ml) contained in a cuvet, is placed into bath assembly chamber which is then fitted with an oxygen electrode. Chamber has handy access slot for expelling air, adding more sample, activator, or inhibitor during test.

The electrode in measuring percent O_2 of test liquid produces an electrical current proportional to the existing percentage of O_2 , which for a given solution at a specific temperature can be directly related to oxygen concentration. The electrical signal registers on the meter of the Model 53 in percent saturation. Sensor requires calibrating against a saturated solution, unless only relative rate data is desired.

Model 53 requires only 3716cm² of level space. Easily operated by a technician with only one day's instruction. Complete Model 53 apparatus includes 13-298-1 Oxygen Meter, 13-298-3 Bath-Stirrer, and 13-298-5 Oxygen Sensor (two required for standard bath assembly). To order entire Model 53 assembly, specify the following catalog numbers.

Component	Cat. No.	Ea
Oxygen Meter	13-298-1	575.00
Bath-Stirrer	13-298-3	575.00
Oxygen Sensor	13-298-5	115.00

13-298-90

Water-and-shock resistant

YSI Model 57 Dissolved Oxygen Meter withstands all stress and strain of field work. Ideal for use in water and waste treatment plants, mountain streams, ocean surveys.

Read dissolved oxygen and temperature in seconds. Three direct-reading ranges: 0-5, 0-10, 0-20ppm. $\pm 1\%$ accuracy. Automatic temperature compensation from -5° to 45°C .

Corrections for ocean salinity made by direct-dialing salinity concentration from 0-40ppt. (Covers full range from fresh water to sea water.)

Two "C" size batteries operate instrument up to 1000 hours. Simple red line adjustment checks battery condition.

Ordering Information: In watertight aluminum case that floats. Handle has 45° tilt back for easy readability. Provisions made for plugging in 13-298-94 submersible stirrer (p 870) or attaching recorder to prepare permanent records. Operating instructions and calibration chart conveniently printed on rear of instrument. 22Lx9.5Wx28cmH. Without probe. Wt, 2.5kg (5½ lb).

13-298-90565.00

Accessories

Oxygen/Temperature Probe

Calibrate easily in air in just seconds. Pressure- and temperature-compensated. Rugged plastic body. Built-in sinker weight. Includes KCl and membrane kit.

Screw-apart construction uses detachable cables of different lengths. Without cable.

13-299-43110.00
(YSI 5739)

Detachable Cables

For 13-299-43 probe. Cables 7.6m and longer include storage reel. (YSI 5740)

Adapter

For using 13-299-35 submersible stirrer (accessory for older YSI Model 54) with 13-298-90 meter. 13-298-9828.00
(YSI 5734)

Accessories for Dissolved Oxygen Meter Contd.

Battery Pack

For operating 13-298-90 meter with submersible stirrer.

13-298-9352.00
(YSI 5721)

Micro Conversion Kit

Permits use of Model 53 Bath Assembly (13-298-3, p 869.) for micro determinations (samples, 1ml or less). Offers even greater sensitivity because total oxygen consumed is a greater percentage of oxygen in system.

13-298-6155.00
(YSI 5304)

Membrane Mounting Kit

Mount new membranes on electrodes with this kit. Includes scissors, O-rings, and electrode holder.

13-298-1411.00
(YSI 5350)

Replacement Chambers

Hold plunger-mounted electrodes in Model 53 Bath Assembly. Precision-made, glass. With 6 chambers and 12 O-rings for sealing.

13-298-948.00
(YSI 5215)

Replacement Plungers

Hold electrodes. Fit glass chambers in standard Bath Assembly (13-298-3).

13-298-1231.00
(YSI 5093)

Submersible Stirrer

Features a single cable for both probe and stirrer — especially convenient for field work. Use only with 13-299-43 probe. Stirrer agitates sample directly in front of membrane, eliminating need for manual stirring. Assures proper rate of stirring for accurate measurement. With cable reel and 15m lead.

13-298-95259.00
(YSI 5795A)

Submersible Stirrer

Plugs into 13-298-90 meter for short-term monitoring, 15m lead.

13-298-94201.00
(YSI 5791)

13-298-95

Portable Dissolved Oxygen Meter

13-298-76

Range: 0-15ppm

Accuracy: ± 0.2 ppm

Altitude, salinity, correction dials

Model 51B Dissolved Oxygen Meter determines dissolved oxygen, %O₂, or % air saturation, and temperature at probe tip. Economical, dependable, precise. Versatile and easy to use. Battery-operated.

Excellent for field work in fresh water and sea water, from sea level to mountain altitudes. Ideal for fast spot checks and routine measurements in rivers, lakes, estuaries, sewage, biological fluids.

Easily calibrated in air or other standards. Panel dials compensate for salinity, altitude, and effect of temperature on oxygen solubility. Temperature compensation for membrane coefficient is automatic.

Employs sensitive Clark-type polarographic O₂ probes with built-in thermistors for temperature measurement. Probe 13-299-43 uses detachable cables available in lengths from 3 to 61m. Scale expansion is possible by using high sensitivity membranes 13-299-32.

Ordering Information: Operates on 4 standard "C" batteries for approx 1000 hrs. Without probe.

13-299-21

Ideal for routine measurements in the lab or short-term monitoring in field applications, sewage plants, plant effluent testing. Direct-reading in ppm dissolved oxygen on dual range scales. With direct temperature read-out and recorder output. Battery-powered, portable. Accurate and easy to use.

Sensitive, Clark-type polarographic O_2 probes with temperature sensor are used. Calibrate in seconds. Automatic temperature compensation for both membrane coefficient and changing sample temperatures.

Dual scale ranges of 0-10 and 0-20ppm are expanded 2-fold to 0-5 and 0-10ppm by using high sensitivity membranes 13-299-32. Output terminals for recorder with at least 50K-ohms input impedance.

Ordering Information

Two models: Disposable batteries **Model 54ABP**. Or rechargeable batteries with line powering capability **Model 54ARC**.

Probe not included; see 13-299-43 on p 869 and BOD probes in table below.

Model 54ARC Oxygen Meter with Rechargeable Batteries. Powered by four 1.25V nickel-cadmium batteries; recharge after 100 hours of use by built-in charger; or operate instrument directly from line. 120V 50/60Hz.

13-299-21480.00

Model 54ABP Oxygen Meter with Disposable Batteries. Operates on four 1.35V mercury batteries for approximately 1000 hours.

13-299-23450.00

Specifications for Models 54ARC and 54ABP

Oxygen Measurement

Range	0-10 and 0-20ppm
Accuracy	$\pm 1\%$ f.s. at calibration temp
Readability	0.05ppm on 0-10 scale; 0.1ppm on 0-20 scale

Temperature Measurement

Range	-5° to $+45^\circ$ C
Accuracy	$\pm 0.6^\circ$ C
Readability	0.25°C

Automatic Temperature Compensation Accuracy

$\pm 1\%$ of O_2 reading within $\pm 5^\circ$ C of calibration temp;
 $\pm 3\%$ of O_2 reading from -2 to $+45^\circ$ C

Ambient Temperature Range

-5° to $+45^\circ$ C

Response Time (Typical)

90% in 10sec at 30° C

Recorder Output

0 to 114-136mV

Dimensions

28Lx9.5Wx22cmH.

Accessories for Models 51B, 54ARC, and 54ABP

Dissolved Oxygen Meters

Self-Stirring BOD Bottle Probe

Senses dissolved O_2 and temperature. For use with O_2 meters Models 57, 51B, 54ARC, 54ABP. Built-in line-operated stirrer. Fits neck of standard BOD bottles or other containers with 17mm opening. With 13-299-16 membrane/KCI kit. 120V 50/60Hz.

13-298-81275.00
 (YSI 5720)

BOD Bottle Probe

Non-stirring. Same as 13-298-81 except without motorized stirrer.

13-298-80140.00
 (YSI 5750)

Cable Adapter

Converts discontinued YSI Models 51B, 54ARC, and 54ABP O_2 meters to take probes 13-298-80, 13-298-81, and 13-299-43.

13-299-4128.00
 (YSI 5735)

Standard Membrane/KCI Kit

For replenishing O_2 sensor of probes 13-298-80, 13-298-81, 13-299-43. Consists of 30 membranes and 1-oz (30ml) dropper bottle with KCI crystals for adding distilled water.

13-299-166.00
 (YSI 5775)

High-Sensitivity Membrane/KCI Kit

Same as 13-299-16 but with high-sensitivity membranes to convert probe for measuring O_2 at low concentrations or at low temperatures.

13-299-326.00
 (YSI 5776)

Carrying Case

Molded plastic case. Use with all YSI Dissolved Oxygen Meters. Holds all components and accessories. Meter can be operated in the case. Dimensions: 40Lx23Wx35cmH.

13-299-2975.00
 (YSI 5890)

Portable Oxygen Analyzer

Ideal for field use. Measures oxygen content of gas, wastewater, liquor, fresh or sea water, chemical effluents, and process streams. Battery-operated. Results in less than 1 minute, reproducible to ± 0.1 ppm or ± 0.1 mgO₂/liter. Results presented on integral meter or accessory recorder (not included; see p 1007).

In operation, electrodes are first covered with an electrolyte-saturated pad, then enclosed in a permeable membrane forming a galvanic cell that produces current directly proportional to amount of O₂ present. Accurate results, in microamperes, are obtainable with a sample flow rate past the probe of only 31 cm/sec. Data easily converted to mg/liter, ppm or mm partial pressure. Probe operates effectively at many depths . . . even as far as 61 m down.

Sample temperature is measured with a sensitive ($\pm 0.1^\circ\text{C}$) thermistor, kept separate from the oxygen probe to ensure accuracy.

13-299-100

Ordering Information: Supplied in corrosion-resistant, protective plastic case with metal catches and frame. 33Lx36Wx13cmH. Weight, 13 lb (5.9kg). Meter has three scales: 0 to 15 microamperes, 0 to 45 microamperes, and 0° to 50°C . Probe and thermistor have 3m leads. Unit supplied with probe, thermistor set, 2 glass vials for probe storage, 2-oz (60-ml) bottle of potassium hydroxide, 2-oz (60-ml) bottle of sodium sulfite, 2 Teflon® collars, 100 electrolyte pads, 50 replacement membranes, probe guard, slide chart, and nomograph.

13-299-100525.00
(Precision 68850)

Accessories for Portable Oxygen Analyzer

Oxygen Probe and Thermistor with 7.6m leads for 13-299-100 Analyzer.

13-299-105138.00

Oxygen Probe. Replacement. For 13-299-100. 3m lead.

13-299-110158.00

Thermistor. Replacement. For 13-299-100. 3m lead.

15-176-2218.50

Electrolyte Pads. Replacements. For 13-299-100.

13-299-120Pk of 100/2.60

Potassium Hydroxide Electrolyte in 2-oz (60-ml) bottles. Replacement. For 13-299-100.

13-299-1247.50

Color Comparator

For transparent, colored liquids

Compares samples with 18 color standards in accordance with AOCS and ASTM Method D1544. Fast, accurate method for matching colors of varnish, drying oils, resins, fatty acids, and lacquers.

Standards are made of optically polished, solid-color glass . . . guaranteed not to fade or change. Illuminator has glass filter and lamp bulb

Place sample in glass tube in comparator housing . . . rotate color standards on revolvable discs at each side of sample until match is made. Light illuminates sample and two standards at one time

Ordering Information: Is fan-cooled and corrosion-resistant. With sample Tube (13-334-12) and Illuminator Bulb (13-334-14). For 115V 50/60Hz.

13-334500.00

Sample Tube. Replacement, for 13-334 Comparator. 10.65mm ID.

13-334-12Pk of 12/10.50

Replacement Bulb for Illuminator in 13-334 Comparator.

13-334-142.50

13-334

Paint Testing

13-355

Paint Volumeter

Device delivers sufficient pigment to exactly fill one-cubic inch (16.39cm³) brass box. Weight of pigment is compared with standard pigment to determine covering power. Lower weights imply greater covering ability.

Ordering Information: Consists of large funnel at top with screen to break up pigment . . . series of glass baffles to regulate fall of pigment . . . and small funnel which directs pigment into cubic inch receiver. With receiver and counterpoise.

13-355152.00

Permeability Cup

Determines permeability of paints, varnishes, and resins easily and reproducibly.

Paint is allowed to dry on a support (freshly amalgamated tin or Patapar parchment), then stripped off, cut, and clamped over cup with known amount of water. Sample and water are then weighed and put into desiccator for specific length of time. Weight checks are made at constant intervals (usually 24 hours). Permeability is directly determined from test data.

13-356

Dipcoater

Device produces paint coatings of uniform thickness for testing in accordance with ASTM D823 method B. Mechanized withdrawal of test strips ensures uniformity of test coating thickness.

You can lift panels from paint, at one of three rates: 5, 7.6, or 10cm/min. Just attach panel to cord which passes over free-moving pulley. Design suggested by Dr. H. F. Payne in *Industrial and Engineering Chemistry*, Anal. Ed., 15:48.

Ordering Information: Support rod height is adjustable. 115V 60Hz. Without test panels.

13-356170.00

13-338

Ordering Information: Is supplied with 3 aluminum clamps, aluminum clamp ring, chromium-plated brass cup body, and instructions.

14-311

Sub-Sieve Sizer™

Measures average particle size in the 0.2 to 50 micron range

Operates on air permeability principle. Result is read directly from multi-curve chart on front of instrument after simple alignment of indices. Eliminates complex calculations. Used for ASTM Method B330 for refractory metals and compounds.

Determination of particle size of sample in a uniformly packed column is based on its resistance to the flow of a closely regulated stream of dried air. Liquid level of flowmeter-manometer corresponds directly to particle size, as read from the chart. Variables have been systematically reduced to greatly enhance accuracy and simplicity of the method

Method uses quantity of sample equal in grams to its density. Sample is loaded into precision-bore tube and is compacted between two paper discs and porous plugs by the rack-and-pinion packing plunger on front of instrument.

Uniform compressive force for achieving optimum sample porosity is assured by using the torque screwdriver of 14-311-2 pressure calibrator accessory to turn down the plunger pinion. Instrument standardization is performed with 14-313-7 jewel orifice calibrator.

Ordering Information: With air pump, pressure regulator, double-range flowmeter, calculator chart, precision-bore sample tube, 2 porous plugs, plug manipulator, plastic funnel, sample tube support, drying agent, paper discs, and operating instructions. Dimensions: 23Lx41Wx74cmH. Weight: 15kg (34 lb). 120V 50/60Hz.

14-311.....867.00

Replacement Parts for Sub-Sieve Sizer

Extra filter paper discs for 14-311 Sizer. 19mm dia.

14-313-12.....Box of 500/3.00

Extra funnel. For filling sample tubes on 14-311 Sizer. Plastic. Capac, 60ml. ID, 6.4cm.

14-313-15.....Pk of 12/3.00

Extra precision-bore sample tube for 14-311 Sizer. Lets you make up another sample while testing with first tube. With 2 porous plugs and plug manipulator. Brass

14-313-5.....33.00

Accessories for Sub-Sieve Sizer

14-311-2

Sample Pressure Calibrator

Ensure reproducible packing of sample tubes with this accessory (compaction force standardizer). Essentially a torque screwdriver which replaces the rack-and-pinion knob on 14-311 Sub-Sieve Sizer. Also furnished is a tube-mounted compression gauge for relating the screwdriver torque reading [inch-lb (cm per g)] to effective compaction pressure [psi (kg/cm²)] at location of sample tube.

Meets requirements of ASTM Method B330. Simplifies procedure for empirical establishment of optimum packed column porosity (degree of compaction) for the particular material being measured.

User prepares a calibration chart to relate screwdriver reading [inch-lb (cm per g)] to compaction pressure [psi (kg/cm²)]. Once the compaction pressure corresponding to the optimum porosity has been established, application of the correct pressure for packing the sample tube is accomplished by simply turning screwdriver to the predetermined dial reading.

For convenient reading of torque in any position of the screwdriver, its dial has 4 identical segmental scales, each graduated 0 to 25 inch-lb (0 to 64cm per 454g) in

1-inch-lb divisions. Compression gauge tube assembly, which user inserts in place of sample tube for preliminary calibration of the torque screwdriver, has 0 to 80 psi (0 to 5.6kg/cm²) scale in 10-psi (0.7kg/cm²) divisions.

Ordering Information: Torque Screwdriver and Tube Assembly.

14-311-270.00

Sample Pressure Calibrator

Standardize particle measurement data. (For Sub-Sieve Sizer.) Compare with data from other standardized sizers.

Calibrator consists of synthetic ruby with precise orifice. Acts on sample permeability principal as does the Sizer. Accuracy has been checked on Sizer's giving accurate flow readings for NBS cement standard (the primary standard). Results engraved on Calibrator.

Position Calibrator on Sizer in place of sample tube. Air flows through orifice at rate equal to value engraved on Calibrator. Set Sizer to that value.

Ordering Information: Supplied in lined, protective box.

14-313-757.00

Sedimentation Pipet

14-232

Determines sub-sieve grain sizes in 30 to 0.5-micron range when water is sedimentation medium. 100 to 1-micron range when using ethylene glycol. Ideal for fineness of abrasives, ceramic masses, clay, chalk, etc.

Consists of 550ml glass cylinder graduated from 0 to 20cm and 10ml pipet with 3-way stopcock for draining contents. Tip of pipet is positioned at zero mark on cylinder scale.

To test, weigh and shake sample with dispersing medium in cylinder. Extract 10ml sample with pipet, at measured time intervals and from constant measured depth in cylinder. Drain sample into weighed evaporating dish, evaporate, then weigh. Percentage (by weight) of a particular group of grain sizes in original sample can now be calculated. Actual radii of fallen particles, and consequently grain sizes (spherical or cubical), are determined using Stokes' law. Plot grain sizes in microns against percentage by weight to obtain curve. Determine grain size by interpolating from curve using known percent by weight.

Ordering Information: Supplied with operating instructions and \$ 29/42 Teflon® chuck-type adapter for cylinder, which ensures precise positioning of pipet to "zero" mark on cylinder.

14-23263.00

Handy Pencils and Markers

Wax Pencil

High melting point, writes on glass, porcelain, and metal. Will not run, even when water is boiled.
Core enclosed in hard roller paper. Unwind as needed.

Reid Vapor Pressure Apparatus
Constant Temperature Bath

Meets ASTM D323 and D1267 specifications. Temperature levels maintained at 100°F ±0.1° (37.8°C) by sensitive thermoregulator and sealed contact relay.

Low-drift, immersion heating elements respond quickly to controls. Continuous stirring by 1/30hp induction motor (enclosed to protect against corrosion).

Bath holds 3 vapor pressure bombs. Cross-bars facilitate quick insertion and removal.

Ordering Information: Is stainless-steel 57Dx43cm ID chamber. Outside dimensions. 103Hx47cm OD. 2.5cm top flange. 115V 50/60Hz 600 watts. Weight 45kg. Without gauges, bombs, or thermometers.
13-419-50 950.00
(Precision 14843)

Vapor Pressure Bomb

Quarter-size bomb for immersion sampling. 4:1 ratio of air chamber to sample vol. Withstands 10.5kg/cm² air pressure at 100°F (37.8°C). Without gauges.

13-419-2585.00

Vapor Pressure Bomb
Gauges

Accurate to ±0.5% full scale. Calibrated and guaranteed. Easy-to-read dial. 11cm dia, 1/4" (6.4mm) IPS male connection.

Petroleum Samplers

For composite sampling
by ASTM D270

For Large Drums

Drum Thief easily removes petroleum samples from 55-gal (208 liter) drums as prescribed in ASTM D270. Place thumb over top opening in sample tube, lower tube to approximately 30cm, remove thumb from opening and allow oil to flow in. To remove, place thumb over opening again and lift tube out. Finger grips permit holding of tube without touching oil-covered portion.

13-417-542.00

For Samples from Top Third of Tank

Weighted sampler for ASTM method D270. Lower to appropriate level in petroleum. Pull stopper with sharp jerk of cord. Allow to fill. Raise sampler, pour off small amount and sample is ready for preparation of the composite. Sampler is 36cmH with neck diameter of 19mm. Capacity approximately 946ml.

13-41767.00

For Samples from Bottom Of Tank

Weighted sampler (Bacon Bomb type) takes samples primarily from bottom of container. But usable at all levels in accordance with ASTM D270. Valve on base of sampler opens at pull of cord, then closes for withdrawing sample. Metal construction. 30Hx6.4cm dia. Holds 473ml.

14-209110.00

Fisher/Tag Saybolt Chromometer

For color determinations

Meets specifications of
ASTM D156 and ASA
Z-11.35

For color determinations (lighter than ASTM 0.5) on undyed automotive and aviation gasoline, jet fuels, naphthas, kerosene, and pharmaceutical white oils. Meets revised specifications of ASTM D156 and ASA Z-11.35.

Device matches color of uranium glass standard to measured depth of sample. Fill sample tube with oil. Check colors in divided field of eyepiece. Drain oil from sample tube until colors match. Convert depth to Saybolt color number with chart.

Ordering Information: With turret assembly, 3 Whole-Standard Discs (13-425), 1 Ungraduated Tube (13-423-5), 1 Graduated Tube (13-423-15), Clear Glass Disc (13-423-25), Rubber Washers (13-423-22), conversion table, mirror (13-423-35), protective wooden carrying case, and instructions, without illuminator.

Automatic Distillation Apparatus

For ASTM D86, D850, and D1078

Accommodates automotive and aviation gasolines, crude oil, turbine fuels, kerosene, aromatic hydrocarbons, etc, according to ASTM D86, D850, and D1078.

Takes just 5 min operator time per test. Technician sets 5 test variables. Positions receiver and flask with premeasured sample. Places chart on recorder. Pushes "start" button. Test proceeds automatically. Panel lights indicate test stage.

Recorder charts complete temperature-volume recovery curve from IBP to EP, with marks at 2- and 15-min points. Temperature accurate to $\pm 0.15\%$ full span $\pm 0.25^\circ\text{C}$. Precision equals or exceeds ASTM requirements. Recovered volume accurate to $\pm 0.1\%$ of total recovered.

Solid-state, modular circuitry ensures reliable performance. Reduces maintenance costs. Stainless-steel housing, bath, and condenser tube resists corrosion.

Ordering Information: With 2 temperature range cards, 2 packages chart paper, 1 slow-response platinum resistance bulb, temperature control cover module, 1 distillate receiver, 4 distillation boards (hole sizes 2.5, 3.2, 3.8, and 5.1cm), and standard condenser cover. Dimensions 56Lx56Wx102cmH. Shipping wt 150kg (330 lb). 120V 60Hz, 2400w.

Fisher/Tag Closed Tester

For products other than fuel oil . . . excellent reproducibility

Determines flash points below 175°F. Electrically heated. Unaffected by drafts. Provides reproducible heat settings and close control. Meets 1.8°F/min ($\pm 0.2^\circ$) limit prescribed in ASTM D56, as well as specifications in ANS Z-11.24, FS 1101.7, API 509, and FPVPC Dt-1-48. Ideal for flash point measurement of lacquers and solvents.

Ordering Information: Includes chrome-plated water bath, with inlet and overflow for introducing medium (heating or cooling). Electric heater, controlled by graduated variable transformer, enables reproduction of settings. Test flame is applied through automatic sliding shutter. Two ASTM thermometers (13-500) measure heat level of sample.

With flash point cup. CSA-approved. 115V 50/60Hz.

Flash Point Testers — Open Cup

Fisher/Tag Open Tester For flash points below 175°F (79.5°C)

Tag Open Cup Tester used to classify volatile liquids as flammable according to ASTM method D1310. Apparatus measures flash points of paints, varnishes, lacquers, vegetable oils, and similar products, below 175°F (79.5°C). Meets specifications of U.S. Bureau of Explosives.

Test conditions are reproducible for reproducible results. Water bath electrically heated. Unaffected by drafts. Controlled by graduated control dial for heating rates of 2°F/min, $\pm 0.5^\circ$. Test-flame wand is mounted to produce identical sweeps across every sample (same height and position). Reference bead lets you maintain proper test-flame size. Pilot light keeps flame lit.

Ordering Information: Supplied with sample cup and one ASTM 9F Thermometer (13-500). 115V 50/60Hz.

Fisher Oxy-Hydrogen Burner

Fast, accurate sulfur and chloride determinations by Wickbold technique

13-559-300

Accessory Absorber System for Oxy-hydrogen Burner

13-559-305

13-559-310

13-559-315

An oxy-hydrogen burner for fast, accurate determinations of sulfur and chlorides in petroleum products and liquefied petroleum gas (LPG).

Methodology requires atomization and burning of sample in an oxy-hydrogen burner within a combustion tube. Combustion products are trapped by absorbing solution in accessory absorber unit. Solution is analyzed for sulfur or chloride using appropriate analytical technique.

Precision, stainless-steel, oxy-hydrogen burner for system provides reproducible flame characteristics for reproducible test results. Permits sulfur-in-hydrocarbon detection in 1 to 200-ppm range. Chloride in butane-butene mixtures detectable in 1 to 100-ppm range. Provides high sample consumption rate

(60+g/hr). Eliminates hazard and expense of breakage, common with quartz burners.

Introduce samples from bottles or flasks through special port in burner. Or, take directly from LPG bomb. Intake rate carefully controlled by Teflon®-packed needle valve.

Ordering Information: Has 19/38 $\frac{1}{8}$ joint for Accessory Absorber Unit. Three serrated hose connections for hydrogen and split stream of oxygen. Fourth outlet, with 3.2mm OD stainless-steel tube, connects by means of Swagelok fittings to needle valve and sample supply tubing. Burner is 16cmL, weighs 340g. Includes instructions for setting up system, and making ASTM measurements.

13-559-300820.00

13-559-310 Absorber Unit

Expedites complete absorption of combustion gases in Wickbold determinations. Draw off resultant gas quickly through three-way stopcock. With 14/35 $\frac{1}{8}$ joint for 13-559-305 Combustion Tube and 19/38 $\frac{1}{8}$ connection for 13-559-315 Spray Trap. Borosilicate glass.

13-559-31043.50

13-559-315 Spray Trap

Prevents carry-over of absorbent solution, loss of sample gases in Wickbold determinations. With 19/38 $\frac{1}{8}$ joint for 13-559-310 Absorber unit. Borosilicate glass.

13-559-31512.00

13-559-305 Combustion Tube

VYCOR® brand glass. Connects 13-559-300 Oxy-Hydrogen Burner and 13-559-310 Absorber unit in Wickbold system. With 19/38 $\frac{1}{8}$ sleeve and 14/35 $\frac{1}{8}$ joint. Resists thermal shock. Water-cooled. With internal condensing coil.

13-559-305186.00

Salt-In-Crude Analyzer

For fast, accurate determination of salt content in crude oil. Range of measurement is 0.5 to 100 lb (227g to 45.4kg)/1000 barrels, accurate to $\pm 5\%$. 3-step test procedure requires mixing 14ml of crude with 56ml of xylene and 70ml of mixed alcohol solvent. Pour mixture into test cell. Read content directly on meter in lb/1000 barrels. Test takes just 10 minutes.

Ordering Information: 25Lx21Wx27cmH and completely self-contained. Includes built-in well for test cells. Steel housing finished with protective baked, grey,

silicone-based enamel. Weight, 6kg. With test cell, electrode/cover assembly and test leads. 120V 50/60Hz, 25w.

Viscosimeters

Fisher/Tag Saybolt Viscosimeter

13-565-2

For ASTM D88

**Temperature range, 60° to 220°F
(15° to 105°C)**

For testing light and heavy oil according to ASTM D88. Handles two or four samples at one time. Bath is thermostatically controlled. Provides uniform, constant temperature environment. Quiet, immersion-type stirrer and internal baffles eliminate hot spots.

Dual heater system operates over 60° to 220°F (15° to 105°C) range. Main 1000-watt heater is open-coil type. Heats to selected levels. Smaller thermostatically controlled unit provides intermittent heat. Pilot lights indicate when heaters are on.

Drain/overflow maintains bath level. Plug permits fast draining. Sample tube stage has integral tube "positioners" to hold tubes firmly in place, minimize breakage and spilling. Positioners easily removed to speed cleaning. Stage is illuminated for maximum visibility.

Sheet metal cabinet houses instrument. Base is cast-aluminum. Top is Bakelite™. Bath has two copper cooling coils for stable, low temperature testing. Inlet and outlet tubes for circulating system are on back of instrument. Control switches on front panel. Thermostatic control on top.

Ordering Information: With dust covers, pipet (13-585), 4 thermometer guards (13-579), tube cleaner (13-586). Without Saybolt flasks, tubes, thermometers, bath oil, and stopwatch. 115V 50/60Hz, 1200w max. Wt 38kg.

13-565-2875.00

Viscosimeters Contd.

High Temperature Saybolt Viscosimeter

For ASTM D88 and E102

Temperature range,
70° to 450°F (21° to 232°C)

For testing road and fuel oils, asphalt, and similar materials according to ASTM D88 and E102. Bath accommodates 4 samples at one time. Heat range, 70° to 450°F (21° to 232°C). Uniformity, $\pm 0.3^\circ\text{F}$ or better.

Baffles in bath direct medium flow providing temperature uniformity. Standpipe maintains bath level. $\frac{1}{30}$ -hp stirrer motor with impeller provides efficient mixing. Unit has three Glo-Coil Heaters (250-, 350-, and 400-watt) and sensor for fast heat-up and good control. Cooling coil for lower temperatures. Stainless-steel flask shelf holds receiving flasks. Minimizes spilling and breakage. Shelf illuminated for good visibility.

Ordering Information: Steel, with protective enamel coating. 33Lx33Wx67cmH. Wt 42kg. With displacement rings and covers for Saybolt-Furol tubes, 4 oil syphon shields, 4 chained corks, 4 thermometer guards, oil strainer, 2 viscosity tube closures, tube cleaners, tube-nut wrench, line cord and plug. Without stopwatch, bath oil, tubes, and flasks.

Viscometers

Ubbelohde Viscometers

Certified accurate (certificate included). Measure kinematic viscosities of petroleum products according to ASTM D445 and D2515.

Fill lower bulb $\frac{3}{4}$ full, then apply suction to top of measuring bulb until upper bulb is filled. Open both tubes to the air and note efflux time between two marks on the bulb above the capillary. Convert this time to centistokes by multiplying by viscometer's conversion factor. Suggested Constant Temperature Bath for this application is 13-619-200 (p 892). FISHERbrand®.

Kinematic Viscosity Baths

13-619-100

For ASTM D445 and Federal Test Standards Uniform to $\pm 0.02^{\circ}\text{F}$

Kinematic Viscosity Bath meets specifications of ASTM D445 and Federal Test Standards 971 Method 305.3. Accommodates 3 Cannon-Fenske viscometers. For use in 0.4 to 16,000-centistoke, 68° to 250°F (20° to 121°C) ranges. Uniform to $\pm 0.02^{\circ}\text{F}$.

Insert viscometers through appropriate holes in cover. Viscometers safely held by strong bronze clips. Cover also supports thermometer, immersion heater system, and stirring motor.

Heat system includes 200- and 300-w heating coils and 5-position control switch for 0-, 125-, 200-, 300- and 500-w input. Micro-set, differential thermoregulator controls temperature levels.

Cooling coil stabilizes near-ambient temperatures.

Bath consists of 7.5 liter borosilicate glass jar, metal support, and Plexiglas jacket. Jacket keeps bath heat in, protects operator from burns. Synthetic rubber gasket seals cover to jar. Base has 4 rubber feet.

Ordering Information: Baked hammerloid enamel finish. 59Hx 27cm dia. Wt, 24kg. 115V 60Hz, 550w max. Recommend Voltage Changer 9-497E (p 281) for use on 230V 60Hz. Without viscometer tubes and thermometer.
13-619-100 950.00
(Precision 74944)

13-619-200

For ASTM D445 Uniform to $\pm 0.015^{\circ}\text{F}$

Kinematic Viscosity Bath accommodates 6 suspended level viscometers. Uniform to $\pm 0.015^{\circ}\text{F}$. 68° to 300°F (20° to 149°C) range. Meets specifications of ASTM D445.

Cover supports viscometers, heating coils, 1/30hp stirring motor, cooling coil, and stainless-steel medium diffuser. Heating system includes 750w coil for fast warm-up, plus 250 and 300w units for maintaining temperature levels. Micro-set thermoregulator controls intermittent heat. Variable control dial provides heat selection from 300w unit.

26.5 liter bath jar is illuminated for maximum visibility. Plexiglas jacket keeps heat in, protects

operator. Base contains all bath controls. Controls include "on-off" switch for each heater, line switch, and variable auto-transformer.

Ordering Information: Base is steel, measures 36Lx36cmW. Over-all height, 88cm. Weight, 34kg. 115V 60Hz, 1600w max. Voltage Changer 9-497F (p 281) recommended for use on 230V 60Hz. Without viscosimeter tubes, thermometer, and bath oil.
13-619-200 1725.00
(Precision 74943)

The Fisher CircuStat® Water Bath can also be used for viscosity testing. See p 59

Accessories for Viscosity Studies

Standard ASTM Viscosity-Temperature Charts

If the viscosities at two different temperatures are known, these charts are a convenient means of determining the viscosity of liquid petroleum oil or blends of petroleum liquids at any temperature within given range. Or, you can determine the temperature at which a desired viscosity is attained. For any given petroleum oil, viscosity-temperature points lie on a straight line.

Charts printed on tough thin paper which can be blueprinted. Description and instructions in text of ASTM Standard D341.

High-Range Charts

Kinematic viscosity: 0.3 to 20,000,000 centistokes. Temperature: -70° to $+370^{\circ}\text{C}$.

Size	Cat. No.	Pad of 50
680x820mm	13-594-10	9.50
217x280	13-594-14	5.00

Low-Range Charts

Kinematic viscosity: 0.18 to 6.5 centistokes. Temperature: -70° to $+370^{\circ}\text{C}$.

Size	Cat. No.	Pad of 50
520x820mm	13-594-12	9.50
217x280	13-594-16	5.00

Tube Cleaning/Drying Apparatus

Clean and dry viscometers easily. Place viscometer over capillary tube and push button on front panel. Solvent spray does the work. Release button. Air flow dries glassware. Air flow pressure regulated by diaphragm regulator. Pressure gauge permits close control. Drain pins remove oil and solvent. Apparatus handles 6 viscometers at one time. Individual controls for each position.

Brass construction. With 19-liter solvent tank. Designed by E. L. Ruh of Standard Oil Development Co.

13-621801.00

Viscometer Pipet

KIMAX® brand. Calibrated. Delivers 100ml of water at 100°F (37.8°C) in 32 to 34 seconds. Outlet tip ground and beveled. Approximately 61cm. Class A.

13-625Pk of 1/11.56
Case of 4/41.60
(Kimble 37105)

Water/Gasoline Detection

Water-Detecting Paste

Detecting Paste determines bottom-water level in petroleum tanks. Spread on gauge rod (harmless to hands, paint, metal), insert rod into tank. Paste is **red** in oil, **white** in water. Oil-water interface clearly indicated.

Supplied in 3-oz (89-ml) collapsible tube . . . enough for approximately 200 applications.

13-634-5Ea/2.00
Pk of 12/21.00

Water-Detecting Strips

Paper strips detect water in gasoline storage tanks and tank cars. Brown, water-soluble coating turns white in water. 31Lx0.9cmW.

13-634Tube of 100/3.00
Box of 6 tubes/16.00

Gasoline-Detecting Paste

Gasoline paste indicates the level of gasoline in tank. Apply to gauge rod (harmless to skin, paint, metal), drop rod into tank. Blue paste yields white line at exact liquid level. Supplied in 2½-oz (74-ml) collapsible tubes, enough for approximately 200 tests.

13-634-10Ea/2.00
Pk of 12/21.00

Water Determination Apparatus

Determine water in petroleum and bituminous materials according to ASTM D95.

Ordering Information: Consists of: 1 short-necked, 500-ml borosilicate glass flask (10-065B); 1 glass Liebig condenser (7-720C) with sealed jacket, 400mmL, with outlet tube ground to a 60° angle and 1 glass trap (9-145) graduated from 0 to 2ml in 0.1ml subdivisions, and 2 to 10ml in 0.2ml. Mount apparatus with Castaloy® clamps (not included).

13-63027.00

Extra Certainty . . . Extra Convenience . . . A Modern Fisher Accumet[®] pH Meter for Every Lab Installation

Fisher's Accumet[®] line of modern solid-state pH meters has models for every application . . . priced to fit every budget.

Eleven models. Two are research instruments with digital readouts that show pH to nearest 0.001 unit . . . and with parallel BCD outputs. Another digital model shows pH to second decimal place . . . also displays sample temperature to nearest 0.1°C. And two digital models are budget-priced for student and general lab use. Five other models have taut-band, multi-scale meters. You get accurate, reproducible readings every time.

Accumet 150 is battery-powered and portable, can be used to test water supplies and effluents.

All with standard electrodes.

Modern laboratories need modern pH meters — Accumet pH meters.

Fisher Accumet®

**All Terminals on Top**

Easy to get at, easy to use. Input terminals fit standard pH, specific-ion electrodes. Recorder terminals are color-coded. Advanced models have jacks for 10 μ amp polarizing current, automatic temperature compensator.

**Built-In Temperature Compensation and Slope Control**

Concentric adjustments*, but independent controls. All Accumet pH meters have 0-100°C manual compensation. Models 144, 230A, 292, 325, 420, and 520 have built-in circuits for automatic compensation. Slope control on Accumet Models 144, 292, 420, and 520 enables user to increase accuracy of readings by correcting for difference in electrode response.

*Accumet Models 420 and 520 have separate dials for manual temperature compensation and slope control

Exclusive Self-Test Circuit

In Accumet 144, 230A, 292, 325, 420, and 520 locates cause of doubtful readings. Set selector on "TEST". If digital display or meter reads "13", source of trouble is external (electrodes, buffer, temperature). If meter does not read "13", instrument is not functioning properly.

pH Meters

Tilting Stand

Holds meter at convenient angle. Electrode support goes on right or left side of meter. "Universal" holder takes all standard 13cm electrodes (accessory for micro-electrodes).

Fisher Electrodes Supplied

With all Accumet pH meters. See pages 909-919 for complete line. Fisher label

guarantees accuracy, reliability, and long service.

Accumet® 520 pH Meter

- Advanced research/specific-ion
- 5-digit readout to 0.001 pH/0.1mV

Most advanced Accumet®. Handles bio-medical, specific-ion determination, and potential measurements. Performance data summarized on p 900.

Five-digit display shows pH to ± 0.001 unit over entire 0-14.000 range, making Accumet 520 ideal for blood pH. Potentials are shown to ± 0.1 mV from -1400.0 to +1400.0mV. Circuits track potential through zero, automatically change polarity without manual switching in titrations, specific-ion measurements.

With function switch on "ABS MV", Accumet 520 is a sensitive digital voltmeter, reading absolute potentials. On "REL MV" setting, with zero set at arbitrary value, readout shows potential difference between indicating and reference electrodes. Electrode jacks take all Fisher electrodes (pp 910-919), specific-ion electrodes (pp929-933), most others.

Indicator lights show function being measured, indicate polarity (pH, -MV, +MV), warn if input exceeds range of instrument. Input circuits are protected against overloads up to 1600VDC.

All operating controls are on front of instrument. Slope control ensures correct response of electrodes that do not follow theoretical Nernst relation. Manual and automatic temperature compensators cover 0°-100°C range.

Electrode, recorder, and other terminals easily accessible. Jack supplies 10 μ amp polarizing current for "dead stop" and Karl Fischer titrations.

Accumet self-test circuits instantly differentiate between instrument malfunction and problems with electrode system. When instrument is functioning properly, display shows 13.000 reading when switch is set on "TEST".

Fisher Accumet pH Meters

13-637-30

Analog and binary-coded digital (BCD) output permits Accumet 520 to be used with potentiometric recorders, digital printers, most computers. Screwdriver adjustment matches output to recorder spans of 0 to 5mV. Compatible with Luft Controller.

Meter tilts to convenient angle, holds electrode support on either side. Electrode holder (13-636-8) accepts two standard 13cm electrodes and temperature compensator sensor. (Accessory 13-637-26 assembly available for use with micro-electrodes.)

Ordering Information: With 13-639-3 Glass Electrode, 13-639-51 Reference Electrode, 13-640-150 Pin-Jack Adapter for metallic electrodes, and 13-636-8 Electrode Holder; 1 pt (473ml) So-B-108 pH 7.00 Buffer; 4 oz (118ml) So-P-138 Saturated Potassium Chloride filling solution for reference electrode; 13-636-22 Polarizing Jumper; plastic dust cover; instruction manual. Case is 32Lx22Wx20cmH

For 120V, 50/60Hz.
13-637-30 1250.00
For 240V, 50/60Hz.
13-637-31 1250.00

Accumet® 420 pH Meter

- Bio-medical/general purpose/specific-ion
- 4-digit full-range readout to 0.01 pH/1mV
- Expanded physiological pH 6-8 range

Designed for bio-medical laboratories where high sensitivity and accuracy are required in physiological range (pH 6-8), but lower precision is acceptable in other applications.

When Model 420 is used in its special expanded mode, pH of blood and other biological samples can be read to ± 0.001 unit in pH 6.000-7.999 range (as accurately as with Accumet 520). In normal mode, 4-digit display shows pH to nearest 0.01 unit over full range from pH 0.00 to 14.00.

Accumet 420 also has extended -199.9 to +199.9mV range, readable to ± 1.0 mV, for potentiometric titrations, monitoring with selective-ion electrodes. In instrument's expanded mode, potential range is

-199.9 to +199.9mV, readable to ± 0.1 mV. When mode is changed, position of decimal point in digital readout is shifted automatically. Like Accumet 520, Model 420 automatically tracks potential through zero in either direction without manual polarity switching.

Model 420 has most of same special convenience features as Accumet 520 — function, polarity and over-range signal lights; calibrated slope control; manual and automatic 0°-100°C temperature compensation; self-test circuits, analog and BCD, outputs for recorders, printers, computers; continuous 0-5mV recorder span adjustment; adjustable electrode support and "universal" holder for 13cm electrodes, mounted on either side of case. Compatible with Luft Controller.

Ordering Information: Same size, and supplied with same electrodes and auxiliary equipment as Model 520.

For 120V, 50/60Hz.
13-637-28 895.00
For 240V, 50/60Hz.
13-637-29 982.00

13-637-28

13-637-292

Accumet® 292 pH Meter

- General purpose/specific-ion/temperature measurement
- 4-digit full-range readout to 0.01 pH/1mV
- Digital temperature readings to 0.1°C

You can read temperature of samples and solutions from 0° to 100°C $\pm 0.1^\circ\text{C}$. . . pH from 0.00 to 14.00 $\pm 0.01\text{pH}$. . . potentials from -1999 to +1999mV $\pm 1.0\text{mV}$, all on the same 4-digit display. Instrument also performs polarized electrode measurements and dead-stop titrations. Performance data and design features are summarized on p 900.

Select operating mode with push-buttons . . . separate settings for pH, millivolt, temperature, or blank. On Temperature Compensator/Slope Control dial, slope control, calibrated from 90 to 100%, is used to correct efficiency of electrodes that do not follow theoretical Nernst relation.

Accumet 292 tracks electrode potential through 0 in either direction — no polarity switching. Indicator lamps show polarity and function (-mV or +mV). Decimal point placed automatically. Instrument

even warns when reading is above or below operational range by blinking all 4 digits.

To check internal circuitry, set three-position switch (Use, Test, and Zeroing) to "Test". If meter reads "13", instrument itself is operating properly and source of trouble is external . . . electrodes, buffer, temperature. If meter does not read "13", instrument is not functioning properly.

Accumet 292 guarantees accurate readings by compensating electrically for sample temperatures from 0° to 100°C. Automatically with 13-636-17 Temperature Compensator Probe . . . manually with Temperature Compensation/Slope Control dial.

Ordering Information: In 3.2mm cold-rolled steel case with red chemical-resistant baked acrylic enamel finish. Operating controls on front. Top-mounted recorder

output monitors pH, mV, and temperature as function of time. Electrode support rod attached to either side. Ceramic integrated circuits with metal-can type transistors. Digital display has segmented planar readout. 34Lx34Wx 9cmH. Available with or without tilting stand.

Accumet 292 pH Meter with Tilting Stand. Tilts to most convenient viewing angle. With combination electrode 13-639-90, electrode support rod and clamp, 13-640-150 pin jack connector for metallic electrode, 13-636-22 polarizing jumper, instructions. Requires 13-636-17 probe for temperature readout.

Voltage	Cat. No.	Ea
120V 50/60Hz	13-637-292	710.00
240V 50/60Hz	13-637-293	710.00

Accumet 292 pH Meter without Tilting Stand. With combination electrode, electrode support rod and clamp, instructions.

Voltage	Cat. No.	Ea
120V 50/60Hz	13-637-294	675.00
240V 50/60Hz	13-637-295	675.00

Tilting Stand. For Accumet 292 pH Meters.

13-637-6945.00

Automatic Temperature Compensator Probe. Used with Accumet 292 pH meters to provide direct temperature readout and automatic temperature compensation over 0° to 100°C range. Can be used with other Accumet pH meters to provide automatic temperature compensation.

13-636-1739.75

Fisher Accumet® pH Meters

Accumet® 144 pH Meter

- Research grade/specific ion
- 5-digit full-range readout to 0.001 pH/0.1mV

For the readability of an advanced research instrument at a general-purpose meter price choose the Accumet® 144 pH Meter. Handles biomedical pH determinations, absolute potential measurements and potentiometric titrations. Performance data and design features are summarized on page 900.

Four or 5-digit, segmented, planar readout. Normal mode (4 digits) shows pH to 0.01 pH unit over entire 14.00 pH range, potentials to 1mV from -1999 to +1999mV. Pull the expand switch to get 5-digit readout, shows pH to 0.001 unit over entire 0 to 14.000 range. Potentials are shown to 0.1mV from -1999 to +1999mV. Circuits track potential through zero, au-

tomatically change polarity without manual switching in titrations and specific ion measurements.

Select function with a turn of a dial: pH, BLANK, or MV. Electrode jacks take all Fisher electrodes (pp 910-919), specific-ion electrodes (pp 929-933), most others.

Input circuits are protected against overloads up to 600VDC. Only the first digit indicates, other 4 blank to warn if input exceeds range of instrument.

All operating controls are on front of instrument. Slope control (90 to 100%) enables users to correct response of electrodes that do not follow theoretical Nernst relation. Manual and automatic temperature compensators cover 0° to

100°C range.

Electrode, recorder, and other terminals are easily accessible on top of case. Jack supplies 10μamp polarizing current for "dead stop" and Karl Fischer titrations.

Accumet self-test circuits instantly differentiate between instrument malfunction and problems with electrode system. When instrument is functioning properly, display shows 13.00 reading when switch is set on "TEST".

A continuous screwdriver adjustment matches output to recorder spans of 0 to 5mV. Accumet 144 is compatible with the Luft Controller and has extremely low power consumption.

Adjustable stand tilts meter at

convenient angle, holds electrode support on either side. Electrode holder (13-636-8) has places for two standard 13cm electrodes and an automatic temperature compensator sensor.

Ordering Information: Supplied with 13-639-90 Combination Electrode, 13-640-150 Pin-Jack Adapter for metallic electrodes, 13-636-22 Polarizing Jumper; 13-636-8 Electrode Holder; plastic dust cover; and instructions. Case is 24Lx15Wx17cmH.

For 120V 50/60Hz.

13-637-144695.00

For 240V 50/60Hz.

13-637-145695.00

Accumet® 142 pH Meter

- Student/industrial lab/general purpose
- 4-digit full-range readout to 0.01 pH/1mV

Most economical digital Accumet® pH meter available. 4-digit, segmented planar readout is readable in the pH mode to 0.01 units over the entire 0 to 14 pH range. In the mV mode, readable from -1999 to +1999. See p 901 for complete performance specifications.

Accumet 142 uses a new "one-chip" A-to-D converter DPM (digital panel meter) for increased reliability. Locking cradle base allows meter to be tilted to any angle, especially convenient for demonstrations. Readout also includes automatic decimal and polarity indicator. The Accumet 142 is compatible with the Luft Controller and has low power consumption.

Over-range indicator lets you know immediately if a reading is

above or below the operational range . . . all 4 digits blink. Output can be matched to sensitivity of potentiometric recorders by connecting resistors across recorder terminals. (1-ohm resistor for 1mV recorder, 10 ohms for 10mV recorder, etc. to 100mV.)

Ordering Information: Has all solid-state circuitry, manual temperature compensation, top-mounted terminals, locking cradle base, and universal electrode holders. It is supplied with 13-639-90 combination electrode.

For 120V 50/60Hz.
13-637-142550.00

For 240V 50/60Hz.
13-637-143550.00

Accumet® 325 pH Meter

- Research/general purpose/specific ion
- Expanded scale readout to 0.0025 pH/0.25mV
- Log scale for ion concentration readings

Excellent instrument for both research and routine projects. Scale expansion enables user to increase sensitivity 10-fold, read to $\pm 0.0025\text{pH}$, $\pm 0.25\text{mV}$. Logarithmic scale shows ionic activity directly with monovalent-ion electrodes. Accumet 325 has a continuous recorder range adjustment $\pm 5\text{mV}$, full-range.

In expanded mode, any 1.4pH or 140mV range can be expanded to cover meter's entire 20cm scale, using Accumet 325's maximum sensitivity (see table of specifications, p 901). Range selector dial is set at beginning of 1.4pH range. For example, with selector at 6, meter covers pH 6.00 to 7.4; next higher range extends from pH 7.00 to 8.4. Overlap between ranges assures readings can be made near middle of scale, where accuracy is greatest, meter is easiest to read.

Special logarithmic scale is used with range dial to read ionic activities directly. Standard solution with known ionic activity is used to calibrate instrument; unknown activities or concentrations are then read directly. If standard has

2×10^{-7} activity value, range dial is set on 7 (value of exponent) and standardization control used to bring meter needle to 2 on logarithmic scale. With unknown solution, range dial is used to bring needle on-scale (determining exponent), coefficient read on meter. Logarithmic scale is direct-reading with monovalent-ion electrodes like 13-639-20 Fisher Sodium Electrode (see p 919). Conversion factor is used for polyvalent ions (see Orion specific-ion electrodes, pp 929-933).

Like other Accumet pH meters, Accumet 325 has all solid-state circuitry that guarantees high stability and accuracy. Test circuit makes meter read 13 as long as instrument is working properly. Operating controls are on front, input and output terminals on top. Automatic 0° - 100°C temperature compensation is built in, manual compensator also provided. Stand tilts to best reading angle, holds electrodes on either side. Readout is taut-band, mirror-backed analog meter. Accumet 325 is compatible with the Luft Controller and has extremely low power consumption.

Ordering Information: Supplied with 13-639-90 Combination Electrode; 13-640-150 Pin Jack Adapter for metallic electrodes; 13-636-22 Polarizing Jumper; 13-636-8 Electrode Holder; plastic dust cover; and instructions.

Fisher Accumet® pH Meters

Accumet® 230A pH Meter

Full-range meter readout to 0.025 pH/5mV

Expanded scale readout to 0.5mV

Model 230A Accumet® pH Meter is a moderate-priced general-purpose instrument suitable for routine analytical and control measurements. Readable to $\pm 0.5\text{mV}$ on expanded scale. Recorder output adjustable, $\pm 5\text{mV}$.

In normal mode, Accumet 230A shows pH to ± 0.025 unit, potential to $\pm 5\text{mV}$ on standard 0-14pH, 0 to $\pm 1400\text{mV}$ scales of 20cm taut-band mirror-backed analog meter. Meter is compatible with the Luft Controller and has extremely low power consumption.

Accumet 230A has same self-test feature, manual and automatic temperature compensation, front controls, top input and output terminals, tilting stand, adjustable electrode holder, and other design features as Model 325.

Ordering Information: Same size and supplied with same electrodes and other equipment as Model 325.

For 120V 50/60Hz.

13-637-230475.00

For 240V 50/60 Hz.

13-637-231475.00

Fisher Electrodes for use with all Accumet pH meters are described on pp 909-919. Orion specific-ion electrodes are on pp 929-933.

Accumet® 150 Portable pH Meter

Rechargeable-battery powered . . .
Ideal for environmental field studies

A great tool for environmental scientists who monitor pH of streams and water supplies. Meter is battery-operated, uses nickel-cadmium cells that give more than 50 hours of continuous service before recharging. Status indicator warns when batteries are nearly discharged. Batteries can be recharged overnight with built-in charger; you can recharge approximately 300 times before replacing batteries.

Field-effect transistor (FET) circuits assure stable, reproducible readings. Mirror-backed 11.5cm taut-band meter covers 0-14pH, -700 to $+700\text{mV}$ ranges, can be read to $\pm 0.05\text{pH}$ and $\pm 5\text{mV}$ using special combination electrode. (See p 902 for performance data.)

Combination electrode has plastic body for maximum protection. Can be removed from support and dipped in lake or stream for rapid reading. Indicating and reference elements are close together, so equilibration delays are minimized. Lead is 76cm long with pin connectors. Single electrode reduces replacement cost if breakage does occur. Electrode comes equipped

with detachable soaking bottle that maintains probe in ready-to-use state.

Rugged, double-wall, water-resistant molded polypropylene carrying case. Operating controls (standardization, function switch, manual 0° - 100°C temperature compensator) and all terminals (electrode, battery charger lead) are on front panel. Electrode support folds down into front of case with holder and electrode.

Ordering Information: Supplied with the 13-639-98 combination electrode and spring holder, two 9.6V nickel-cadmium batteries, 183cm battery-charger lead, two 2½ oz (74ml) polyethylene bottles for buffers, thermometer, and instruction manual. (See pp 908 and 920 for buffer solutions.)

13-637-15320.00

Combination Electrode. Supplied with Accumet 150 Portable pH Meter; has two pin connectors. Usable from 0 to 14pH, 10° to 80°C . 13cm long with 76cm lead.

13-639-9842.55

Accumet® 140A pH Meter

Student/industrial lab/general purpose
With tilt-lock stand

Line-operated pH meter with locking cradle allows meter to be tilted to any angle, seen in all parts of classroom. Useful in industrial laboratories that do not require readings closer than $\pm 0.05\text{pH}$ unit or $\pm 5\text{mV}$.

Can be used over entire 0-14pH range, to perform potentiometric titrations in 0 to $\pm 700\text{mV}$ range. Accumet® 140A has 11.5cm taut-band, mirror-backed meter, top-mounted terminals, manual temperature compensation from $0^{\circ}\text{--}100^{\circ}\text{C}$, and mounts for electrode support on right or left side of meter. It is compatible with the Luft Controller and has extremely low power consumption. See p 901 for complete specifications.

Recorder output is variable, from 1mV to 100mV full span, by placing external resistors across color-

coded recorder terminals (Use 1-ohm resistor for 1mV recorder, 10 ohms for 10mV span, etc.)

Ordering Information: Supplied with 13-639-90 Combination Electrode that gives fast, reproducible response to potential changes in titrations and 13-636-8 Universal Electrode Holder.

For 120V 50/60Hz.
13-637-140295.00

For 240V 50/60Hz.
13-637-141295.00

Fisher Electrodes. Fisher Scientific Company makes an unusually complete line of electrodes for use with Accumet pH meters, potentiometric titrators, and pH meters of most other makes. They are described on pp 909-919.

Accumet® pH Meter Accessories

Micro Swing-Arm Assembly

For samples down to 2ml. Lets you measure pH of samples as small as 2ml with Accumet 520, 420, 292, 325, and 230A meters. Stainless-steel support rod with micro-beaker platform replaces regular Accumet support rod. L-shaped anodized aluminum arm holds miniature glass and calomel reference electrodes, swivels out of way for changing samples. Height adjustable to suit sample vessel.

With 13-639-77 Miniature Glass Electrode, 13-639-79 Miniature Calomel Electrode, five 5ml disposable beakers, and instructions.
13-637-26135.00

Automatic Temperature Compensator

Resistance thermometer in probe, same size as 13cm electrodes, continually signals sample temperature to automatic compensating circuits in Accumet 520, 420, 325, 292, 230A, and 144 pH meters. Readings are automatically corrected for temperature variations in the $0^{\circ}\text{--}100^{\circ}\text{C}$ range. With model 292, it also provides direct digital readout of temperatures from $0^{\circ}\text{--}100^{\circ}\text{C}$.

13-636-1739.75

Tilting Stand

For Accumet 292 pH Meter.
13-637-6947.00

Universal Electrode Holder

Plastic holder, supplied with all Accumet pH meters except Model 150, has places for two 13cm electrodes, one micro-electrode (Microprobe or Bioprobe — see p 918), and 13-636-17 Automatic Temperature Compensator sensor.

13-636-816.00

Wall Bracket

Mounts pH meter under shelf. Mounts instrument out of the way, under a shelf or wall cabinet. Regular 76cm electrode leads reach down to bench. Bracket fits adjustable base of Accumet 520, 420, 325, and 230A pH meters.

13-637-7034.00

Polarizing Jumper

Supplied with Accumet 520, 420, 325, and 230A meters. Passes $10\mu\text{amp}$ current between electrodes in dead stop and Karl Fischer titrations.

13-636-224.00

Pin Jack Adapter

For metallic electrodes. Adapts pin connectors of metallic electrodes to fit standard electrode input jacks or Accumet pH meters. Supplied with all models except Model 150

13-640-15010.50

$0^{\circ}\text{--}100^{\circ}$ Thermometer

Lens front. Mercury-filled, accurate to $\pm 1^{\circ}\text{C}$, for use with manual compensators. Length 16cm; immersion 1.3cm

13-640-280Ea/11.50
Pk of 6 62.00

Fisher Certified Buffers & Salts

Color-Coded Buffers

For mistake-proof calibration

pH 4 . . . red

pH 7 . . . yellow

pH 10 . . . blue

Fisher Certified Buffer Solutions in the most widely used pH values, colored with a harmless, permanent dye to identify pH. No effect on stability. Provide instant recognition in or out of bottle. Eliminate beaker labeling and pH mix-ups.

Precisely formulated against primary standards of the National Bureau of Standards. Tight pH tolerance — accurate to ± 0.01 pH at 25°C.

Ready-to-use in dispenser-top polyethylene bottles. Spout in cap is sealed by hinged cover. Snap shut to reseal. No seal to puncture. Cap also screws off for easy pouring.

Label is same color as buffer. Shows lot number, expiration date, pH tolerance at 25°C, and pH/temperature conversion chart. Your assurance of top quality.

pH	Color	Cat. No.	Pint (473ml)	Case of 6
4.00	Red	So-B-101	3.75	18.60
7.00	Yellow	So-B-107	3.75	18.60
10.00	Blue	So-B-115	3.75	18.60

Fisher Certified Buffer Solutions

Provide ± 0.02 pH accuracy

Fisher buffer solutions are made from established formulas and standardized at 25°C by potentiometric titration. Stated pH values certified

accurate to ± 0.02 pH at time buffer is bottled.

Pints (473ml) and quarts (946ml) supplied in polyethylene bottles with screw

pH	Ingredients	Cat. No.	Pint (473ml)	Case of 6	Quart (946ml)

Fisher Electrodes

Guarantee you accurate, reproducible pH measurements and potentiometric titrations

Fisher Scientific Company makes an unusually comprehensive line of modern pH electrodes for analytical, research and industrial applications. Used with Accumet 144, 420, or 520 pH Meter (pp 902-904), they are sensitive enough to measure blood pH to ± 0.001 unit.

Rugged, accurate full-range electrodes can be used to monitor industrial process lines. Combination electrodes, with indicating and reference elements in same body, are valuable for monitoring water supplies and industrial effluents, and simplify biological measurements.

These electrodes are supplied with Accumet pH meters and can be used with virtually all modern American and European pH meters and potentiometric titrators, such as Fisher Titrimeter® and Titralyzer® described on pp 1182-1190.

All Fisher electrodes are made in Electrode Department of Fisher Instrument Division. Every electrode is tested to assure that its response agrees with theoretical value given by Nernst equation expressing pH/potential relation. Stringent quality-control enables Fisher to guarantee all electrodes for a year after purchase. (See warranty below.)

Fisher Electrode Department offers custom-electrode service to anyone who needs electrodes with physical construction or chemical make-up different from regular Fisher line. For information and quotations, write to Manager, Electrode Department, Fisher Scientific Company, 711 Forbes Ave., Pittsburgh, PA 15219.

Glass Electrodes

Universally used as indicating electrodes for pH and potential titrations. Potential at interface between internal elements and electrolyte filling solution is affected by migration of hydrogen ions through membrane of special glass, and hence by pH of sample.

Fisher electrodes are made of specially formulated glass with high ionic conductivity that responds quickly to changes in exterior pH. Electrical impedance is less than 100 megohms. These properties make it possible to use thick, rugged bulb that withstands rough handling in field or industrial applications.

Another special glass is used in 13-639-20 Sodium Responsive Electrode (see p 919), used to make direct measurements of sodium-ion activity in aqueous solutions.

Reference Electrodes

Provide stable, fixed potential against which potential of glass indicating electrode is measured. Most widely used calomel type has mercury electrode covered with mercurous chloride (calomel) in saturated potassium chloride electrolyte. Calomel electrodes can be used over full pH range, and from -5° to $+80^{\circ}\text{C}$. Electrodes with silver/silver chloride internal elements can be used up to 110°C .

Electrical connection between internal electrolyte and sample is made through porous ceramic plug sealed into glass tip of electrode. More stable and less likely to become clogged or contaminated than asbestos fibers or threads used as junctions in electrodes of other makes. Ideal with non-aqueous samples, suspensions, slurries, etc., and with specific-ion electrodes like Fisher Sodium Electrode (p 919) and Orion specific-ion electrodes (pp 929-933).

Combination Electrodes

Enclose indicating and reference elements in same glass or plastic probe, have same porous plug junction used in reference electrodes. Small, fixed distance between reference junction and pH-sensitive glass bulb increases reproducibility. Combination electrodes can be used anywhere a glass/calomel pair would be used. Single probe permits measurements in test tubes, long-neck flasks, other containers too small for electrode pair.

Three Fisher combination electrodes have bodies only 6.4mm in diameter. Microprobe™, with 13cm and 8.9cm sizes, is general-purpose micro-electrode. The Bioprobe™ is used with biological specimens that would be affected by mercury ions in reference electrolyte. Micro glass electrode is connected by salt bridge with separate reservoir containing 13-639-79 Miniature Calomel Electrode. Reference electrode may be thermostated to increase accuracy.

Metallic Electrodes

Metal disc or wire can also function as indicating electrode in measurement of oxidation-reduction potentials and "redox" titrations. In "dead stop" and Karl Fischer titrations, small constant current ($10\mu\text{amp}$) with Accumet pH meters is passed between two platinum electrodes.

Fisher metallic electrodes have platinum-and-silver sensing elements. Latter is used in silver and halide determinations. Platinum/Silver/Silver chloride combination electrode (13-639-82) is also available.

Individual Identification

For user's convenience, catalog number, pH range, and temperature range are imprinted on every Fisher electrode. All Fisher electrodes can be used over entire pH 0-14 range. Most can be used from below freezing to boiling.

All Fisher electrodes have integral leads and standard connectors that fit terminals on most modern instruments. This eliminates electrolytic corrosion that may occur in electrodes having separate leads. Standard leads are 76cm long; leads from 18 to 305cm also available.

All electrodes are electrically shielded and insulated from internal elements to lead and connector. Guarantees stability and reproducibility of readings, minimizes pick-up of electrical "noise."

All electrodes individually boxed in shock-absorbent expanded polystyrene cases to minimize breakage in shipment and storage.

Fisher Electrode Warranty

Fisher Scientific Company warrants that each Fisher electrode will perform within published specifications for period of one year from date of purchase if used exclusively in manner described in instructions supplied with it.

Any electrode not so performing will be replaced free of charge provided it is returned to Fisher Branch or Sales Office through which it was purchased and provided registration form supplied with it has been returned to Fisher within one month after date of purchase.

Specifications of all Fisher electrodes are given in tables on next 9 pages.

13-639-3

Glass Electrodes

Rugged, stable, accurate Fit all pH meters

Fisher glass electrodes are rugged, sensitive indicating electrodes you can use with any modern pH meter, over entire pH range and at temperatures from below freezing to boiling.

Potential and pH readings are as accurate as with ordinary fragile electrodes. Response is within $\pm 0.05\text{pH}$ of theoretical Nernst value from pH 4 to 9. Sodium error is only 0.05 at pH 13.

Completely shielded internal elements and cable guarantee stable readings, minimize electrical "noise". Polarization is negligible when electrode is removed from sample or touched while in use. Standard leads are 76cm long, but electrodes are available with 18 to 305cm leads.

Thick, rugged glass bulb has fast response to pH changes, impedance less than 100 megohms, yet minimizes abrasion and breakage. (Electrode body is 3.2mm shorter than reference electrode to protect bulb from scratches.)

Glass electrodes are also made to special requirements of Radiometer and Beckman Model G, N, N-2, and H-2 pH meters.

Electrode of sodium-responsive glass (13-639-20) is made for direct sodium-ion determinations with Accumet 325, other pH meters (see "Specialized Electrodes", page 919).

Reference Electrodes

Porous ceramic junction for stable readings at no extra cost Choice of flow rates, internal elements

In Fisher reference electrodes, junction between internal electrolyte and sample solution is made through porous ceramic plug sealed into glass tip of electrode (see illustration). This design, standard with Fisher, is extra-cost "special" in other lines.

Porous-plug junction is ideal with non-aqueous samples, suspensions, slurries, and emulsions. Gives more stable readings and is less likely to become clogged or contaminated than asbestos fibers or threads used as junctions in electrodes of other makes. This stability is especially useful with specific-ion electrodes.

Internal elements

Majority of Fisher reference electrodes are most widely used

calomel type, with mercury internal electrode covered with mercurous chloride, in saturated potassium chloride electrolyte. Can be used over entire pH range, and from -5° to 80°C .

Fisher also makes electrodes with silver/silver chloride internal elements in 4M potassium chloride saturated with silver chloride. These can be used up to 110°C .

Another silver/silver chloride electrode (9-313-216) has sodium sulfate as electrolyte. It is intended for potentiometric titrations of silver or halide ions.

Fisher's "universal" calomel reference electrode (13-639-51), supplied with Accumet pH meters, comes as a "Dri-Pak™" with filling solution in a 2 oz (60ml) polyethylene vial. Prevents leaking and "creeping" of salt from junction while electrode is in storage.

Choice of flow rates

Electrolyte seeps through porous ceramic plug of standard Fisher reference electrodes at rate of only $5\mu\text{l/hr}$. Flow can be reduced to $0.5\text{--}3\mu\text{l/hr}$ by using 13-639-57 "Cracked-Bead" Electrode, whose junction is interface between two parts of bead. Useful with biological specimens that may be con-

taminated by larger amounts of electrolyte.

Rates of 100 to $200\mu\text{l/hr}$ are obtained with sleeve-type electrodes, in which junction is orifice covered by ground glass sleeve. Flow of electrolyte controlled and junction flushed by loosening sleeve.

In reverse-sleeve models, sleeve can be raised for flushing or cleaning, but cannot slip off accidentally. Model 13-639-61 has small orifice specified by ASTM for "neut number" titrations of petroleum products (Method D664).

For Beckman Model G

Special 6.4cm porous-plug reference electrode (13-639-210) with 18cm lead is used with 13-639-205 Glass Electrode for measurements made in shielded electrode compartment of Beckman Model G pH meters.

For other pH meters

Porous-plug reference electrode is offered for Radiometer pH meters. Standard and sleeve-type electrodes available for Beckman Models N, N-2, and H-2 pH meters.

Remote reference

Any Fisher reference electrode can be used to measure pH of hot

With biological materials that would be contaminated by electrolyte seepage from immersed electrode, by making salt bridge from sample to electrode with 13-639-55 Remote Reference Junction (see p 919). Insert probe with porous-plug junction in sample. Use compatible electrolyte to make electrical connection to reservoir containing reference electrode.

Fisher Combination Electrodes

Make accurate measurements in small containers

Fisher combination electrodes save money because indicating and reference elements are in same body. When electrode gets rough usage in field or factory, breakage cost is reduced significantly.

Glass bulb and reference junction are short, fixed distance apart (see illustration) for greater reproducibility, faster response.

Full-size combination electrode supplied with Accumet 140A pH Meter is furnished with plug/pin double connector (see illustration). This connector fits standard pH meter terminals. Other connectors available for special requirements such as paired pin terminals for Accumet 150 Portable pH Meter

Plastic probe resists breakage

Plastic-bodied combination electrode, ideal for student and field use, is available with standard or specialized connectors.

Micro combination probes

Microprobe™ and Bioprobe® micro combination electrodes are only 6.4mm diameter, can be inserted in vials, centrifuge tubes, other small containers. Flexible plastic adapter, supplied with electrode, fits them to standard holders.

Bioprobe is glass electrode with side-arm that can be connected to separate reservoir with reference component (13-639-79 Miniature Calomel Electrode). Permits use of compatible electrolyte when sample would be damaged by mercury or chloride ions on standard electrolytes.

Redox combination

Special metallic combination with platinum indicating element and silver/silver chloride reference is designed for environmental oxidation-reduction potential (ORP) measurements.

Specialized Electrodes

Sodium-ion electrode

Platinum and silver electrodes Remote-reference junction

Fisher line includes many special electrodes for applications in which standard glass and reference electrodes are not adequate.

Metallic electrodes

Metal wire or disc is used as indicating electrode with standard reference electrode in oxidation-reduction potential measurements and redox titrations. Two Fisher platinum electrodes (one for microsamples) plus a silver electrode are used in silver or halide titrations.

Two 13-639-115 Platinum Electrodes are used together in constant-current ("dead stop") titrations in which electrodes are polarized by passing 10μamp current between them. This converts one electrode into reference element, with the other as indicator.

Sodium-ion electrode

Sodium-ion activity can be read directly on logarithmic scale of Accumet 325 pH Meter, using Fisher 13-639-20 Sodium Responsive Electrode, an indicating electrode with special glass bulb that responds to changes in sodium ion concentration in sample. It gives reproducible readings over range from pNa 0 to 6 when used with 13-639-51 "Universal" Reference Electrode.

Remote reference

Remote Reference Junction makes it possible to use standard reference electrodes in situations where chloride or mercurous ions would be deleterious to sample, where sample temperature is beyond range of reference electrode, or when it is more convenient to have reference located away from sample, so filling solution can be replenished more readily.

It is a hollow, probe-like, 13cm reference electrode with porous-plug junction. Has serrated connection for tubing running to separate reservoir. Can be filled with any compatible electrolyte, using any reference electrode in remote reservoir. Flow rate at junction can be varied by pressurizing or changing height of reservoir. Reservoir can be thermostated to increase accuracy of readings.

Accessories for Fisher electrodes are listed on pp 907 and 920.

Electrodes made for use with Corning pH meters are on p 922.

Orion specific-ion electrodes are described on pp 929-933.

Fisher Electrode Accessories

13-636-8

13-640-282

13-640-150

13-636-8 Universal Electrode Holder

For all standard electrodes

Plastic holder with metal pinch-plate mounts standard electrodes on 6.4mm dia support rods. Pressure on metal pinch-plate loosens grip of support rod, so holder and electrodes can be set at any height. Supplied with all Accumet pH meters except portable Model 150.

Holder has two holes (16mm dia) with internal collar support for standard 13cm pH electrodes, 6.4mm hole for Microprobe and Bioprobe micro-combination electrodes. Third 16mm hole can be used for full-size combination electrode, Automatic Temperature Compensator sensor, or micro-combination electrode in flexible adapter.

13-636-816.00

13-640-282 Support Clamp

Mounts electrodes anywhere

Fisher Castaloy® clamp grips laboratory support rods up to 18mm dia; holds 13-638-8 electrode clamp and electrodes.

13-640-2825.00

13-640-150 Connector

Adapts metal electrodes to pH meter

Pin-Jack Connector, supplied with all Fisher Accumet pH meters, plugs into glass-electrode terminal on top of meter. Accepts pin connector on platinum and silver electrode leads. Fits most modern pH meters.

13-640-15010.50

Refill Solutions

For reference and combination electrodes

Internal electrolyte in reference and combination electrodes gradually seeps through porous plug and must be replaced. Fisher provides refill solutions in polyethylene bottles.

Calomel Electrodes. Filling solution is potassium chloride saturated at 20°C, prepared from recrystallized neutral KCl.

So-P-138Pt (473ml)/4.56
Case of 6 pt/22.80

Silver/Silver Chloride Electrodes. Filling solution is 4M potassium chloride saturated with silver chloride. Used in all Fisher combination electrodes.

So-P-135Pt (473ml)/5.80
Case of 6 pt/29.10

Dri-Cote™
Siliconizing Fluid

Coats electrode body with thin layer of water-repellent silicone oil. Electrodes are easy to clean after using with suspensions, emulsions, slurries, other viscous and adherent materials. Non-corrosive; non-flammable. 2 oz (59ml) bottle.

D-140Ea/4.32
Case of 6/21.60

Adapter

Use Fisher glass electrodes on Corning Model 5 pH meter. See 13-641-587 adapter on page 923.

Hydrion Buffers

In capsules

Ingredients for precision buffers (± 0.02 pH) compounded in capsules. Dissolve powder in 100ml of distilled water. Vial of 12 capsules; 6 vials per box.

Corning Digital pH Meters

- Wide operating and calibration ranges
- Grounded or ungrounded samples
- Computer and recorder output

All solid-state Corning pH meters with large non-blinking Nixie tube displays. Digital 112 research model has 5-digit readout. Models 109 and 110 have 4-digit displays.

Wide 220mV calibration range and manual and (optional) automatic 0°-100°C temperature compensator help you match instrument response to characteristics of practically any pH, metallic, or chemical-sensing electrode pair. Models 110 and 112 have 80-100% slope control for even closer matching.

All three instruments can be used with grounded or ungrounded solutions. Model 109 has chassis ground; others have both chassis and earth grounds.

All three pH meters have adjustable instrument zero and potentiometric recorder output. All three track millivolt readings through zero with automatic polarity change. All three have

BCD (binary coded digital) output, so they can be interfaced with digital printers and data processors.

Pushbutton operating controls are on front of instrument, with input and output connections and adjustments on back. Integrated circuits are used throughout for greater precision and stability.

Die-cast aluminum cases have chemical-resistant epoxy coating. Stable aluminum stand allows you to tilt meter to most convenient reading angle and to mount it under shelf or wall cabinet.

Corning Digital pH Meters all supplied with electrode support rod and plastic holder; Corning glass and reference electrodes; shorting lead for polarized electrode titrations; pH 4 and 7 standardizing buffers; 50ml beaker; instructions.

Performance data for all three models are given in table, p 922.

13-641-515

Digital 112 pH Meter

**Advanced research/biomedical/specific-ion
5-digit readout to 0.001 pH/0.1mV**

Precision research instrument comparable to any on market. Reads pH to ± 0.001 from 0 to 14, and potential to ± 0.1 mV from -1800 to +1800mV.

Readout has automatic decimal point, polarity, function, mode and overload indicators. Adjustable display rate makes standardization easier. Enables you to follow potential

changes closely for endpoint detection. Indicator shows rate used.

You use 80-100% slope control and 0°-100°C temperature compensator with calibration dial to match response to electrode characteristics.

Voltage selector switch allows you to use Model 112 on 95-135V or 190-120V 50/60Hz.

13-641-510

Digital 110 pH Meter

**Research/general purpose/specific-ion
4-digit full-range readout
Push-button readout expansion to 0.001 pH/0.1mV**

Model 110 has 4-digit display on which you can read pH to ± 0.01 unit from 0 to 14, and potential to ± 1 mV from -1800 to +1800mV. This model has expandable readout that you can use to increase resolution

to ± 0.001 pH and ± 0.1 mV by pushing EXPAND button.

Slope control, manual and optional automatic temperature compensation, and line voltage switch are same as with Digital 112.

13-641-505

Digital 109 pH Meter

**General purpose/specific-ion
4-digit full-range readout to 0.01 pH/1mV**

Model 109 is general-purpose pH meter with 4-digit readout. It has extra-large millivolt range, -1900 to +1900mV, readable to ± 1 mV. It reads pH to ± 0.01 unit over pH 0-14 range.

Instrument has same manual and optional automatic tem-

perature compensation as other models, but does not have their slope control. Indicator lights on display panel show function and polarity of readout. Model 109 operates only on 105-125V 57-63Hz

Corning Analog pH Meters

4 models that use all types of electrodes including specific-ion

Corning solid-state analog pH meters display readings on taut-band mirror-backed direct-reading meters. Low drift, negligible noise, high stability against line voltage fluctuations. Zener diodes supply reference voltage, increase precision. Manual temperature compensator dial and circuits for automatic compensation with optional accessory. All have earth ground. Input/output terminals on back of epoxy-coated die-cast aluminum cases.

Most models have 10mV recorder output, generate 10 μ amp polarizing current for Karl Fischer titrations. With Corning glass and reference electrodes, shorting lead, pH 7 buffer, saturated KCl electrode filling solution, 50ml graduated beaker, dust cover, operating manual.

Model 12

Research/general purpose/specific-ion
Expanded scale readout to 0.002 pH/0.2mV

Research pH meter has unique range expansion capability that displays any 1 pH or 100mV span over full width of meter, using 15-step selector. Permits readings to ± 0.002 pH and ± 0.2 mV anywhere in range. Can calibrate in one range, read in others.

Recorder output is adjustable (10-100mV full scale). Built-in circuits generate 5 μ amp polarizing current.

Specs and ordering information, next page.

Model 7

General purpose
Full-range meter readout to 0.02 pH/2.0mV

General-purpose pH meter can be read to ± 0.02 pH and ± 2.0 mV on 18cm scale. Calibration control compensates for ± 1.5 mV variation in electrode asymmetry potential, so most electrodes can be used.

Operates on 60Hz line; has screw-in feet and wedge to change viewing angle.

Specs and ordering information, next page.

Model 10

General purpose/specific-ion
Full-range 25cm meter readout
Expanded scale readout to 0.005pH/0.5mV

Any 3 pH or 300mV span can be displayed over wide 25cm scale. When function knob is pulled out, instrument shifts to 5.5-8.5pH range where most measurements are made; readings are displayed on special scale.

Operates on 105-125V 60Hz, has 10mV recorder output, generates 10 μ amp polarizing current. Meter can be tilted to convenient viewing angle by screwing accessory feet into front, inserting wedge to keep electrode support rod vertical.

Specs and ordering information, next page.

Model 5

Student/industrial lab/general purpose
Instructions imprinted on case

For schools and factory laboratories, where high precision is not required, price a major consideration. Melamine-phenolic plastic case. Stainless-steel cradle permits meter to be tilted.

Solid-state circuits. Built-in calibrating short, guarded input. Comes with Series 500 Corning electrodes (see next page). Accessory required for polarizing current.

Specs and ordering information, next page.

Electrode Adapter. Permits use of Fisher glass electrodes with Corning Model 5 pH meter. Converts meter's input terminal to take standard pH connector.

Corning Battery-Powered pH Meters

Great for environment testing

Two Corning pH meters, powered by 9-volt transistor batteries, can be used to monitor pH of lakes, streams, and municipal water supplies, and to check effluents for excess acidity/alkalinity. Expanded scale mode of Model 610A also allows monitoring pollutants detectable with specific-ion electrodes.

Both models have all solid-state circuits, taut-band meters, and 0°-100°C manual temperature compensation. Guarded input circuit minimizes electrical errors. Specifications for both instruments are given in table.

Model 610A

Model 610A has expanded mode which gives it resolution exceeded in the Corning pH meter line only by Model 12, Digital 110 and 112. Any 1.4 pH span can be extended full width of 14cm meter, read to ± 0.005 unit. Normal 0 to ± 700 mV range is expanded to any 140mV span, readable to ± 0.3 mV.

With Corning Series 500 combination electrode, support rod and holder, pH 7 buffer, filling solution, 50ml beaker, and shorting strap. It uses three 9V batteries. (Carrying case is available on special order.)

Model 3

Model 3 Portable pH Meter covers 2-12 pH and 0 to ± 300 mV ranges with meter readable to ± 0.1 pH and ± 6 mV. (Range can be extended to pH 0 and 14 by adjusting calibration.)

This model comes in carrying case with Series 300 combination electrode and pH 7 buffer. It uses two 9V batteries.

FISHERbrand Model 107 pH Meter

Calculator-size
7.6mm LED display

Orion Specific-Ion Electrodes, now available for some 20 mono- and divalent ions, are described on pp 929-933.

Corning Electrodes are listed on p 922.

Fisher Electrodes are on pp 909-919.

A truly portable, hand-held digital pH meter for field and laboratory applications. The most up-to-date circuitry is used to achieve high stability, linearity, and reliability with minimum power consumption. Readout is a 7.6mm high, bright red display (to 0.01 pH units).

Model 107 is powered by 6 "AA" batteries for field operations, with a typical battery life of 1 year. Adaptable for laboratory use with a UL approved AC line adaptor. Its convenient carrying case (21Lx32Wx9.8cmH) holds the meter, electrode, and 3 buffer sample bottles.

Specifications for Model 107 Portable pH Meter

Range	0-14 pH
Rel Accuracy	0.03 pH
Resolution	0.5 pH
Temp. Comp.	0°-100°C
Size	9.2Lx9.2Wx4.8cmH

Ordering Information: Supplied with hard vinyl carrying case; plastic combination electrode with soaking bottle (13-639-98); electrode clamp and support rod; 6 "AA" batteries; line adapter (specify 110 or 220VAC); operating instructions.
13-637-5195.00

Orion Digital pH/mV Meters. . . "dip and read" analyses

Orion Research greatly simplified many analyses when it introduced chemical-sensing electrodes. Measurements are simple, rapid, and require relatively inexpensive instrumentation. Measuring system consists of sensing electrode, reference electrode,

and meter — either expanded-scale pH/mV meter or Orion 407A specific-ion meter.

Each of the 23 chemical-sensing electrodes develops a potential in response to the level of a particular species in solution, just as a pH electrode responds to the level of

hydrogen ion in solution. However, since a 1mV change in reading can correspond to a 8% change in concentration (for a divalent ion), the meter should be accurate to 0.1mV or be specifically designed, like the Orion 407A for chemical sensing electrode work.

Models 701A and 801A digital pH/mV meters are recommended for research or high precision applications. The 407A meter is recommended for routine analysis and field measurements.

Orion 801A Digital pH-mV Meter Features pushbutton restandardization

Pushbutton restandardization control simplifies calibration.

Put electrode in pH 7 buffer, press restandardization button. Meter automatically calibrated to pH 7.000. For known addition method: after you press button, add known increment to sample and read potential difference directly.

0.000 to 13.999 pH range with ± 0.002 pH accuracy and -1999.9 to $+1999.9$ mV range with ± 0.1 mV accuracy.

Use with redox, solid-state, liquid membrane, and gas-sensing electrodes.

7-segment display (25mmH) can be read up to 10 meters away. Reads to 5 digits, with decimal point location and polarity indicator. Out-of-range indicator shows if sample is above or below operating range.

Manual 0° to 100°C temperature compensator and 80 to 100% slope control increase accuracy by matching unit response to characteristics of pH electrode. Use test switch to check electronic circuits.

Input and output connections on back. Connectors for Karl Fischer titrations. Analog recorder output adjustable to 100mV full scale. Digital output for interfacing to data processing equipment.

Aluminum construction with chemically resistant finish. With universal electrode holder, support

rod, input shorting strap, instruction manual. Order electrodes separately.

Specifications table, next page.

13-641-715

Model 601A Digital pH Meter

Reads to ± 0.01 pH unit from pH 0.00 to 13.99 and to ± 1 mV from -1999 to $+1999$ mV. Handles acid-base and Karl Fischer titrations and ORP measurements.

7-segment LED display reads to 4 digits (15mmH). Automatic sign indication, no polarity switching. Out-of-range indication.

Controls include function switch (REL MV, MV, STDBY, pH, ISO), calibration (asymmetry potential), temperature compensator, and slope indicator.

Rear controls include isopotential point adjust (pH 6-8 nominal), strip chart recorder span (0-100mV for full range), and automatic temperature compensation (ATC) adjust (probe optional accessory).

Connections for sensing electrode, reference electrode, strip chart recorder output, BCD output, ATC probe input, Karl Fischer polarizing current, and ground jack.

Provided with combination electrode, input shorting strap, support rod, electrode holder, and instruction manual. Chemical-resistant polyester-painted steel cabinet.

Specifications table, next page.

Model 701 A Digital pH/mV Meter

Lower-priced Model 701A has 7-segment LED display (15mmH). Reads to ± 0.001 over 0.000 to 13.999 pH range. In mV mode, it reads from -1999.9 to $+1999.9$, accurate to ± 0.1 mV.

Automatic sign indication. No polarity switching. Out-of-range indication. Controls include function switch (REL MV, MV, STDBY, pH/.01, pH/.001); calibration (asymmetry potential); temperature compensator; and slope indicator.

On rear panel, isopotential point adjust (pH 6-8 nominal), strip chart recorder span (0-100mV for full range), automatic temperature compensation (ATC) adjust (slope). Connectors for sensing electrode, reference electrode, strip chart recorder output, BCD output, ATC probe input (probe optional accessory), Karl Fischer polarizing current, and ground jack.

Input shorting strap, electrode support rod, electrode holder, and instruction manual. Chemical-resistant polyester-painted steel cabinet.

Specifications table, next page.

Orion Model 301 Analog pH/mV Meter

Simple, reliable, easy on budgets

An economical instrument, in rugged metal housing, ideal for educational and factory use where accuracy of ± 0.1 pH/ ± 10 mV is acceptable. The 120mm meter scale covers range of 0 to 14 pH and -400 to +400mV.

Easy to use for pH and mV measurement and potentiometric titrations. Simple front-panel controls for calibration, manual temperature compensation 0 $^{\circ}$ -100 $^{\circ}$ C, and needle zeroing.

Equipped with fast-response, laboratory grade combination electrode for pH determination. Electrode incorporates reference and indicating element in same body.

Jacks accept standard pH, redox, and reference electrode connectors.

Accessories for Orion Chemical-Sensing Electrodes and pH/mV and pH Digital Meters

Model 605 Electrode Switch

Lets you analyze for 6 ions
Same time . . . same sample

Use Model 605 manual electrode switch with Orion chemical-sensing electrodes for determining as many as six different ions in same sample using one pH meter as readout.

Model 605 has five independent channels, each with its own calibration control and electrode input terminals. (Your pH meter provides sixth channel.) You can read up to six ion species in same sample, using one meter and one reference electrode. Or use six pairs of electrodes — sensing and reference — in six different samples. Read them in any order you like by turning channel selector, which also shows which channel is active. Isolation resistance is 10¹⁴ ohms, so channels won't interfere with each other.

Each channel has -600mV to +400mV calibration range. Case stacks with Orion digital pH meters. It is chemical-resistant polyurethane-coated steel, 22Lx33Wx9cmH; weighs 4.5kg; is battery-powered.

Ordering Information:

Comes with 4-wire (input, reference, ground, calibration) connecting cable for pH meter.

Orion Portable Model 399A pH/mV Meter

Digital accuracy with analog price for lab or field

A high performance pH meter equally at home in the lab or field. Includes a built-in battery charger (for optional rechargeable battery), a strip chart recorder output with span control, an electrode slope indicator, automatic temperature compensator jack (for optional ATC), and rugged, splashproof case.

Can be used over entire 0-14 pH range, ± 0.02 pH with an expanded 2.8 pH unit range, ± 0.004 pH. For potentiometric titration in 0 to ± 700 mV range, ± 4 mV.

Simple front-panel controls for function, calibration, manual temperature compensation (0° - 100° C), and slope indication (80-100% of theoretical Nernst slope). 18cm, 3 color-coded mirror-backed scale. Not affected by weather extremes. 10Lx17Wx20cmH.

Ordering Information: With support rod, shorting strap, electrode holder, research-grade combination pH electrode, electrode filling solution,

line cord, buffers, and instruction manual. 90-250VAC 50/60Hz.

Orion Portable Model 407A Specific Ion Meter

With two direct-reading scales

Versatile, portable specific-ion meter does pH measurements . . . redox analysis . . . potentiometric titrations . . . ion concentrations . . . total concentrations by known addition and subtraction method. Used with any gas-sensing, pH, redox, or specific-ion electrode. Ideal for pollution analyses, industrial quality control, research applications.

Read results from 4 color-coded scales:

pH — range 0 to 14 with ± 0.01 pH repeatability and ± 0.02 pH relative accuracy.

Direct Reading (Specific-Ion)

— direct readout of ion concentration in any unit (ppm, moles/liter, mg/liter) over any 2 decade operating range.

Known Increments (Specific-Ion)

— Total concentration read directly after single addition of standard solution. Uses known addition and subtraction analytical method.

Millivolt — For redox and titration analyses over 0 to ± 700 mV range.

Controls and electrode connections on front. Manual 0° to 100° C temperature compensator and 80 to 100% slope control increase accuracy by matching meter response to characteristics of electrode. 10mV recorder output on back.

Ordering Information:

Mirror-backed taut-band meter. Compact, lightweight. 17Lx10Wx20cmH. For 90-250V 50/60Hz or with supplied rechargeable batteries for

field use. Is available with or without case.

Specific-Ion Meter with Case.

In foam-lined carrying case. Also includes electrode holder, 3 plastic beakers, three 4 oz (120ml) solution bottles, instruction manual, battery kit.

13-641-739.....595.00

Specific-Ion Meter without Case.

Includes electrode holder, instruction manual, battery kit.

13-641-743.....560.00

Battery Kit. Replacement for rechargeable nickel-cadmium battery as supplied with Model 407A. Recharges during on-line power operation after 24 hours. Battery life per charge: 150 hours.

13-641-742.....40.00

Specifications for Model 407A

Operating Ranges

Ion Activity	10 to 0.1 (in any 2 decades)
Known increments	1.12 to ∞ , ∞ to 0.12
pH	0 to 14 pH

Recorder output

10mV full scale deflection

Chemical-Sensing Electrodes

Orion chemical-sensing electrodes operate on same principle as familiar pH electrodes. Generate potential proportional to activity of specific ion in solution, in same way that glass electrode responds to hydrogen ions.

Measure electrode potential with expanded-scale pH meter and compare value with calibration curve made from standards. Or use other appropriate electrode techniques described in instructions.

You can determine dozens of common anions and cations instantly by simply dipping electrodes in sample and reading meter. You rarely have to do more than adjust sample pH and total ionic strength.

Orion Model 407A Specific Ion Meter has a scale that reads directly in sample concentration with these electrodes. Fisher Accumet® 325 expanded scale pH meter also has special scales that can be calibrated to show concentration directly. Other expanded scale pH/mV meters can also be used including digital instruments with sufficient precision such as the Fisher Accumet 520.

Indirect methods allow determination of ion species for which no special electrode exists — e.g. sulfate, chlorine, and aluminum. Electrodes are sensitive endpoint detectors for chelometric titrations. Analyses are usually made in aqueous solutions. Most of the electrodes are usable also for some non-aqueous samples.

Table on following page lists currently available Orion electrodes. There are three basic types — solid-state membrane, liquid ion exchange, and gas sensing electrodes. Electrodes for some species are available in combination type incorporating reference and sensor elements in same body.

Solid-State

Unbreakable epoxy body, resistant to most inorganic reagents and to all but strongly polar organic solvents. Can be used with samples as small as 0.3ml in 13-641-815 micro sampling dishes.

Potential developed across solid-state membrane is proportional to level of specific ion solution. Membrane functions like glass membrane in pH electrode bulb.

Combination

This convenient configuration has solid-state sensing element and sleeve-type reference in same plastic body.

Samples can be as small as 10 μ l. The chloride combination electrode (13-641-902) is applied directly to film of sweat on patient's skin to screen for cystic fibrosis.

Reference Electrodes

Orion offers two sleeve-type reference electrodes with single and double junctions. Electrode bodies virtually unbreakable, chemical-resistant plastic.

Equitransferant filling solution for single-junction electrode has exceptionally low liquid-liquid junction potential. Electrode potential is equivalent to standard calomel type. Double junction gives analyst choice of solutions at sample interface.

Liquid Ion Exchange

Replaceable sensor module contains, at the ion-sensitive tip, a porous organophilic membrane fed by a porous plastic reservoir saturated with ion exchanger. Just unscrew threaded sensor module from electrode body to replace it. Replacement modules are factory-tested. Provide 6 months service under normal laboratory conditions. Electrodes are supplied with 2 sensor modules.

Upper portion of the chemically-resistant plastic electrode body is shielded. No problems with static electricity. Insensitive to air bubbles. You can analyze 0.3ml samples in micro sampling dishes.

Use only for aqueous samples.

Gas-Sensing

These electrodes determine dissolved gases in aqueous solutions. Special sensing and reference element in two-part body, needs no external reference electrode. Outer body is fluorocarbon; inner element is housed in epoxy. Electrode is used at 20° angle to prevent trapping air against sensing membrane.

Comes in vinyl-covered case with 50ml internal filling solution, 20 membranes, assembly equipment, and instructions.

SOLID STATE

LIQUID

COMBINATION

GAS-SENSING

Single-Junction Reference Electrode. Used with most Orion electrodes (see table). With 2 oz (59ml) of 13-641-899 filling solution.

13-641-89870.00

Filling Solution. Equitransferant filling solution minimizes junction potential and matches characteristics of calomel electrode. Box of five 2 oz (59ml) bottles with filling spout.

13-641-899Box/13.00

Double-Junction Reference Electrode. Used with silver/sulfide, chloride, lead, nitrate, potassium, sodium, and perchlorate electrodes. Compatible solution is used in outer chamber. With 2 oz (59ml) each of inner and outer filling solutions.

13-641-90085.00

Inner Chamber Filling Solution for 13-641-900 double-junction reference electrode. Box of five 2 oz (59ml) bottles with slip-out spout.

13-641-901Box/13.00

Outer Chamber Filling Solution for 13-641-900 reference electrode. 10% KNO₃. Box of five 2 oz (59ml) bottles.

13-641-897Box/13.00

*Interfering ions are listed in order of decreasing interference. Data based on Orion Research *Analytical Methods Guide*, 5th Edition (1973), and Orion specification sheets for the more recent electrodes.

Orion Electrodes, Standards, and Accessories

Characteristics of Orion chemical-sensing electrodes are summarized on preceding page. Two special analytical systems, 15-410 Water Fluoride and 14-832-400

Skin Chloride, are described on pp 1237 and 561. Selectivity constants of interfering ions are in instructions.

Redox Combination Electrode

Develops potential proportional to ratio of oxidized-to-reduced species. Same as endpoint detector for redox titrations.

Platinum sensor and reference element in chemical-resistant plastic body. Reference element develops stable potential independent of sample composition. 10 μ l sample.

13-641-905150.00
(Orion 96-78)

Ammonia Electrode

Gas-sensing combination electrode determines ammonia dissolved in water and nitrogen compounds converted to ammonia. Read concentration on 407A Specific-Ion Meter or Accumet 325.

Measurements not affected by sample color, turbidity, or suspended solids. CO₂, SO₂, sulfides, and cyanides do not interfere. 2½ml sample.

With 20 membranes, 50ml of filling solution, O-rings and spacer, tweezers, instructions.

13-641-922295.00
(Orion 95-10)

Ammonium Chloride Standardizing Solution. Convert to ammonia with sodium hydroxide. Pint (473ml).

13-641-92310.60

Bromide Electrode

Determines bromide in aqueous and certain non-aqueous solutions. Determine epoxy groups by HBr titration (ASTM D1562).

Do not use in strong reducing solutions or with ions that form insoluble salts or stable complexes with silver. Samples must not contain more than 10⁻⁷M sulfide or more than traces of free CN and I.

13-641-865175.00
(Orion 94-35)

Bromide Activity Standard. In polyethylene bottle. Pint (473ml).

13-641-86610.00

Cadmium Electrode

Determines cadmium in aqueous and some non-aqueous samples. End-point detector for EDTA titrations.

Sample should not contain silver, mercury, or more than 10⁻⁷M copper. Free lead or ferric ion should not be greater than cadmium level.

13-641-777275.00
(Orion 94-48)

Calcium Electrode

Determine calcium in aqueous solutions, in wine and beer, dairy products, foods, pharmaceutical products, fertilizers, explosives, clay, soil. End-point detector for EDTA calcium titrations.

Sodium ion at level of 0.26M causes only a 10% error in 10⁻³M calcium solution. Sample pH must be adjusted to pH 5.5-11 range.

With 2 screw-on sensing modules, instructions.

13-641-801225.00
(Orion 93-20)

Calcium Replacement Module for 13-641-801 electrode.

13-641-80375.00

Calcium Activity Standard. In polyethylene bottle. Pint (473ml).

13-641-81110.60

Chloride Ion Exchange Electrode

Preferred when samples contain interferences for 13-641-875 Solid-State Chloride Electrode. Does not respond to cupric, ferric, or permanganate ions. Interference is produced by nitrate and sulfate, and at pH levels below 2 and above 11 (13-641-875 electrode then preferred). Use only for aqueous samples.

With 2 screw-on sensing modules, instructions.

13-641-839225.00
(Orion 93-17)

Chloride Replacement Module for 13-641-839 electrode.

13-641-84175.00

Chloride Solid-State Electrode

Cannot be used in certain biological fluids, strong reducing solutions. Sulfide must be less than 10⁻⁷M, and cyanide and iodide present only in traces.

13-641-875175.00
(Orion 94-17)

Chloride Combination Electrode

Used with very small samples. Characteristics are same as 13-641-875 solid-state electrode. With 2 oz (59ml) of 13-641-903 internal reference filling solution.

13-641-902225.00
(Orion 96-17)

Reference Electrode Filling Solution. Supplied with 13-641-902 chloride combination electrode. 2 oz (59ml) bottles.

13-641-903Box of 5/13.00

Reference Electrode Filling Solution for measurement of concentrations above 0.01M Cl⁻ with 13-641-902 chloride combination electrode. 2 oz (59ml) bottles.

13-641-899Box of 5/13.00

Chloride Molarity Standard, 0.1M. Activity and concentration given for various dilutions. Pint (473ml).

13-641-87610.60

Chloride PPM Standard, 100 ppm. Activity and concentration given for various dilutions. Pint (473ml).

13-641-87710.60

Orion Skin Chloride System (described in Med-Lab Section, p 561) includes special direct-reading meter and 14-832-408 Combination Electrode.

Cupric Electrode

Determines copper in foods, beverages, pharmaceutical products, paints, fungicides, water supplies, and streams. Permits close control of copper in etching and plating baths, ore-refining processes, etc. End-point detector for EDTA copper titrations.

Silver and mercuric ions must be no more than 10⁻⁷M. High chloride and bromide levels may cause malfunction in concentrated solutions. Ferric iron is eliminated by adjusting pH. Not affected by zinc, nickel, cobalt, sodium, potassium,

or magnesium levels 10,000 times greater than cupric ion.

13-641-829275.00
(Orion 94-29)

Cupric Activity Standard, 0.1M

Use to calibrate meter to read cupric ion levels directly. Activity and concentration for various dilutions on label. Pint (473ml).

13-641-83510.60

Cyanide Electrode

Determines cyanide in water supplies and industrial wastes. Monitors cyanide content of plating baths, rinse tanks, petrochemical processing solutions, etc. Electrode lasts longer if solutions are diluted to 10⁻³M before analyzing, since membrane dissolves slowly in concentrated cyanide.

13-641-896175.00
(Orion 94-06)

Divalent Cation Electrode (Water Hardness)

Responds to combined calcium and magnesium levels to measure total water hardness. Detects exhaustion of water softeners. End-point detector for EDTA titration of total calcium and magnesium.

Senses cupric, zinc, ferrous, nickel, strontium, and barium ions as factors in total hardness value. Sample pH must be adjusted to pH 5.5-11 range. Use only for aqueous samples.

With 2 screw-on sensing modules, instructions.

13-641-946225.00
(Orion 93-32)

Divalent Cation Replacement Module for 13-641-946 electrode.

13-641-94775.00

Water Hardness Activity Standard. Contains 100 ppm Ca²⁺ as CaCO₃. See also 13-641-811 calcium activity standard, this page. Pint (473ml).

13-641-86210.60

Chemical-Sensing Electrodes and Accessories

Fluoride Electrodes

The most widely used Orion chemical-sensing electrodes. Quick, easy way to monitor levels in fluoridated drinking water and to measure excess fluoride in natural water. Use to measure fluoride in stack gases by analyzing scrubber solutions.

Water, industrial effluents, and process streams can be continuously monitored by recording electrode readings.

Biochemical researchers use these electrodes to investigate fluorine in teeth, bones, tissues, serum, and other body fluids. They are extremely sensitive endpoint detectors for titrations with lanthanum, thorium, and other complexing agents.

TISAB™ (total ionic strength adjustment buffer), special reagent for pretreatment of samples containing iron, aluminum, and hydrogen ion, holds pH in 5-6 range, and releases fluoride as free ion for direct determination with Orion electrodes.

Both Orion fluoride-sensing electrodes have rugged epoxy body resistant to acids, bases, and organic solvents. Use with aqueous and non-aqueous samples.

Fluoride Electrode

This electrode has unique sensing element made from crystal of rare-earth fluoride which does not have to be renewed and is not poisoned by proteins or other organic materials in samples.

TISAB buffer will prevent complexing action of hydrogen ion at low pH values.

Used in Model 409 Orion Water Fluoride System (p 1237) with special direct-reading meter.

13-641-870275.00
(Orion 94-09)

Fluoride Combination Electrode

Use in test tubes. Measures fluoride in as little as 10 µl of sample on spot-test paper. Clear plastic sleeve shows when filling solution needs replenishing. With 2 oz (59ml) of 13-641-899 filling solution (preceding page).

13-641-904325.00
(Orion 96-09)

TISAB Total Ionic Strength Adjustment Buffer

Mix 1-to-1 with sample to adjust to pH 5-6, eliminate iron and aluminum complexation, and re-

lease free fluoride ion for determination with fluoride electrodes. Gal (3.8 liters).

13-641-87315.00

Fluoride Molarity Standard, 0.1M

Use to calibrate meter for fluoride determinations.

13-641-871Pt(473ml)/10.60

Fluoride PPM Standard, 100 ppm

Calibrates meter to read in ppm.

13-641-872Pt(473ml)/10.60

Iodide Electrode

Determines iodide in brines, industrial effluents, pollution control, pharmaceutical and biomedical research, process streams. End-point indicator for iodide titrations.

Use in samples containing strong oxidizing agents, but not in strongly reducing solutions. Chloride content can be 1,000,000 times greater and bromide 5000 times greater than iodide. Sulfide must be absent and cyanide at least 2½ times lower than iodide.

13-641-868175.00
(Orion 94-53)

Iodide Activity Standard, 0.1M.

Use at various dilutions to calibrate meter to read iodide directly.

13-641-869Pt (473 ml)/10.60

Lead Electrode

Determines lead and sulfate without time-consuming precipitation, drying, and weighing.

Use with aqueous or non-aqueous samples as endpoint indicator for EDTA or sodium oxalate titration of lead, and for lead perchlorate titration of sulfate.

Cadmium and ferric ions must not exceed lead concentration. Silver, mercury, and copper must be less than 10⁻⁷M.

13-641-772275.00
(Orion 94-82)

Lead Activity Standard, 0.1M.

Use at various dilutions to calibrate meter to read lead directly.

13-641-773Pt(473ml)/10.60

Sulfate Standard, 0.1M. Use to calibrate meter to read sulfate.

13-641-774Pt(473ml)/10.60

Nitrate Electrode

Use for determining nitrate in pollution studies, biological research, and testing of soils, sewage, fertilizers, explosives, pharmaceuti-

cal products, meat, pickling baths.

Iodide, bromide, and chloride may interfere at high levels. Cations do not interfere. Use only for aqueous samples.

With 2 screw-on sensing modules, instructions.

13-641-943225.00
(Orion 93-07)

Nitrate Replacement Module for 13-641-943 electrode.

13-641-94475.00

Nitrate Activity Standard, 0.1M.

Use at various dilutions to calibrate meter to read nitrate directly.

13-641-888Pt(473ml)/10.60

Fluoroborate Electrode

Monitors fluoroborate in tin, lead, and copper electroplating baths. Determines boron in soils, irrigation water, alloys, refractories, semiconductors, glass, pigments, enamels, high-energy fuels . . . after initial conversion of boron to fluoroborate using an ion exchange column.

Sample pH range 2-12. Nitrate, sulfate, acetate, and halides can interfere at high levels. Use only for aqueous solutions.

With 2 screw-on sensing modules, instructions.

13-641-781225.00
(Orion 93-05)

Fluoroborate Replacement Module for 13-641-781 electrode.

13-641-78375.00

Additional Orion chemical-sensing electrodes are described on next 2 pages.

Chemical-Sensing Electrodes and Accessories Contd.

Nitrogen Oxide Electrode

Gas-sensing combination electrode measures nitrogen dioxide (NO_2^-) in air (following collection in absorbing liquid). Nitrite (NO_2^-) in meat and food products. And low levels of nitrate (NO_3^-) in seawater and brines, without interference from high background chloride levels.

Responds to dissolved nitrous acid (HNO_2). In absorbing reagent, NO_2 is directly converted to HNO_2 . For analyzing nitrites, sample is acidified and converted to HNO_2 . For analyzing nitrates, sample is passed through amalgam column and acidified for conversion to HNO_2 . Use only for aqueous samples. Sample preparation requires 13-641-930 buffer (below).

Some volatile weak acids, including formic and acetic, interfere at high levels. Electrode is free of anionic and cationic interferences.

In storage box with 20 membranes, bottle of filling solution, spare O-rings, spacer, instructions.

13-641-935295.00
(Orion 95-46)

Internal Filling Solution for 13-641-935 electrode. 50ml.
13-641-9366.00

Membranes for 13-641-935 electrode.
13-641-937Box of 20/25.00

Spare Parts Kit for 13-641-935 electrode. Spacer, 2 O-rings.
13-641-94010.00

Nitrite Molarity Standardizing Solution. 0.1M sodium nitrite.
13-641-938Pt(473ml)/10.60

Buffer. For sample and standard pH adjustment. Add 5ml per 50ml of sample.
13-641-930Pt (473ml)/10.60

Perchlorate Electrode

Determines perchlorate content of explosives and rocket fuels. Also for monitoring process lines. Use only for aqueous samples.

With 2 screw-on sensing modules, instructions.
13-641-889225.00
(Orion 93-81)

Perchlorate Replacement Module for 13-641-889 electrode.
13-641-89175.00

Potassium Electrode

Useful for analyzing soils, fertilizers, foods, beverages; for field testing soil and water; and for serum, urine, saliva, other body fluid applications.

Samples as small as 0.3ml are adequate in 13-641-81 micro dish.

Electrode is highly sensitive to cesium. Selectivity for potassium over sodium is appreciably greater than found in glass electrodes. Sodium ion at level of 0.5M causes only a 10% error in 10^{-3}M potassium solution. Hydrogen ion interference can be eliminated by pH adjustment. Use only for aqueous samples.

With 2 screw-on sensing modules, instructions.
13-641-911A250.00
(Orion 93-19)

Potassium Replacement Module for 13-641-911A electrode.
13-641-91290.00

Potassium Activity Standard, 0.1M. Contains 150 millimoles of NaCl. Use to calibrate Orion meters for direct potassium readout.
13-641-917Pt(473ml)/10.60

Silver/Sulfide Electrode

Senses both free silver ions (in absence of sulfide) and free sulfide (in absence of silver).

Detect sulfide in pulp and paper, drilling muds, industrial wastes. No interferences. Determine total sulfide by known-increment method with Model 407A Specific-Ion Meter (see p 928). Silver can be determined to 10^{-7}M . Use as end point detector in silver nitrate titrations of bromide, chloride, iodide, cyanide, or sulfide.

13-641-880175.00
(Orion 94-16)

Sodium Electrodes

Orion offers two Sodium Electrodes: 13-641-867 single electrode and 13-641-906 combination electrode.

Both models use flat sodium-sensitive glass membrane mounted in rugged epoxy body, eliminating conventional fragile glass bulb. Use both to determine sodium directly in water (including seawater), muds, soils, serum and other biological fluids, industrial process lines.

If electrode is used with Orion

Model 801A pH/mV Meter and appropriate servo-system, it will signal appearance of sodium in boiler water or distillation line, and initiate action to remedy breakdown.

Single Sodium Electrode

Use with reference electrode. Does not respond to anions or polyvalent cations, but readings may be affected by high levels of other monovalent cations. Hydrogen ion error increases below 10^{-3}M Na, but can be eliminated by pH adjustment.

13-641-867175.00
(Orion 94-11)

Sodium Combination Electrode

Sleeve-type silver/silver chloride reference electrode. Determine sodium content of samples as small as 10 μl on spot-test paper.

13-641-906225.00
(Orion 96-11)

Sodium Activity Standard, 100 ppm

Calibrates meter to read in ppm. In polyethylene bottle.

13-641-909Pt(473ml)/10.60

Sulfur Dioxide Electrode

Gas-sensing combination electrode measures dissolved sulfur dioxide in analysis of flue gases, industrial atmospheres, processed food, beverages. Determines sulfite levels of pulping liquors, boiler feed water, industrial wastewater, photographic developer, following required acidification. Also measures bisulfite levels after pH adjustment.

Use only for aqueous samples. Sample preparation requires 13-641-930 buffer.

Electrode is free of anionic and cationic interferences. Some volatile weak acids, such as acetic and hydrofluoric, may interfere if present in 30-fold excess over SO_2 level.

In storage box with 20 membranes, spare O-rings, spacer, supply of filling solution, instructions.

13-641-925295.00
(Orion 95-64)

Internal Filling Solution for 13-641-925 electrode.
13-641-926Box of 10 vials/15.00

Membranes for 13-641-925 electrode.
13-641-927Box of 20/25.00

Sulfur Dioxide Molarity Standardizing Solution. Each vial makes 100ml of 0.01M standard.
13-641-928Box of 10 vials/15.00

Electrode Holder

Prevents errors. Orion electrode holder holds electrode at 20° angle so bubbles will not form.

13-641-81215.00

13-641-812

Sulfur Dioxide PPM Standardizing Solution. Each vial makes 100ml of 1000 ppm standard.
13-641-929Box of 10 vials/15.00

Buffer. For sample and standard pH adjustment. Add 5ml per 50ml of sample.
13-641-930Pt (473ml)/10.60

Disposable Dishes

For micro samples. With plastic micro sample dishes, you can use Orion electrodes to analyze samples as small as 0.3ml.

13-641-815Box of 50/7.50

Graph Paper

Simplifies known-addition determinations. 10% Gran's plot paper eliminates calculations with Orion techniques. Plot electrode mV on vertical antilogarithmic axis, add reagent volume or sample concentration on linear axis.

13-641-941Pk of 100/20.00

*Blood pH/Gas Analyzers.
See Med/Lab, pp 572-576*

pH Testing

Calomel Electrode Vessel

For making standard half-cell

Students and teachers can make calomel cell to use as reference electrode. Platinum wire sealed into glass makes electrical contact between mercury in sidearm and mercury pool, covered with mercurous chloride (calomel), in bottom of cell filled with KCl solution. Inverted-U sidearm completes contact with sample. Stopcock prevents sample from diffusing back into electrolyte.

13-643-7022.40

13-643-70

Universal Indicator Color Chart

Determines 4.0 to 10.0 pH

Use with SO-I-60 Fisher Universal Indicator Solution to determine approximate hydrogen ion concentrations. Chart has 12 translucent color standards permanently mounted adjacent to openings of same size. The pH value of each color standard is printed below the standard.

Place 10ml of solution to be tested in 13mm OD test tube. Add 0.5ml Universal Indicator Solution. Shake tube gently and hold it in back of openings in color chart for comparison with the standards. The pH of the color standard most closely matching sample is read

directly from chart. Chart only supplied under this number, but supplied without charge on orders of pint (473ml) and quart (946ml) sizes of the SO-I-60.

I-1802.40

Universal Indicator Solution

For rapid determinations of approximate pH of aqueous solutions. Various colors listed on label of each bottle. I-180 color chart included with pint (473ml) and quart (946ml) sizes.

SO-I-60Pt/11.25
Qt/15.50

pH Indicator Solutions

Wide pH Range Coverage

Each solution is standardized to Clark and Lubs specifications. For use in test sets (Water/Wastewater, see p 1243).

Indicator	pH Range	Cat. No.	Pt (473ml)
Cresol Red, 0.02%	0.2-1.8, 7.2-8.8	So-I-26	5.00
Thymol Blue, 0.04%	1.2-2.8, 8.0-9.6	So-I-6	5.10
Metacresol Purple, 0.04%	1.2-2.8, 7.6-9.2	So-I-28	10.80
Methyl Violet, 0.04%	0.2-1.8, 2.0-3.2	So-I-10	5.15
Bromophenol Blue, 0.04%	3.0-4.6	So-I-12	6.50
Bromocresol Green, 0.04%	3.8-5.4	So-I-14	5.60
Methyl Red, 0.02%	4.2-6.2	So-I-16	5.44
Chlorophenol Red, 0.04%	5.2-6.8	So-I-18	5.00
Bromocresol Purple, 0.04%	5.2-6.8	So-I-20	4.38
Bromothymol Blue, 0.04%	6.0-7.6	So-I-22	4.61
Phenol Red, 0.02%	6.8-8.2	So-I-24	5.02

pH Indicator Papers

A-979

A-980

Alkacid® Pocket Tester

Instant pH value with Alkacid® pocket tester. pH sensitive paper provides 5 distinct color changes in the pH range from 2 through 10. Color ranges from red (pH 2), orange (pH 4), yellow (pH 6), green (pH 8), to blue (pH 10). Intermediate pH values can be estimated.

Consists of 4.6mLx6.4mmW roll of Alkacid paper and transparent plastic dispenser with color chart.

A-979Pk of 3/3.00

Alkacid Wide-Range Strips

Same as A-979 except supplied as 100 strips in amber vial. With color comparison chart attached.

A-980Pk of 12 vials/5.95
Case of 144 vials/64.00

Control Any Variable ...
Automate Any System ... With
the Luft® Master Controller

13-642-500

For a complete description of the Luft® Controller, see Titrators, p 1192.

Alkacid Full-Range pH Kit

pH accuracy to ± 0.25 . Provides sharp color change for each 0.5pH unit.

Consists of A-979 wide range paper for determining approximate pH value and six specific short range papers:

- Range 1 (pH 0.0 to 3.0)
- Range 2 (pH 3.5 to 5.5)
- Range 3 (pH 6.0 to 8.5)
- Range 4 (pH 9.0 to 11.0)
- Range 5 (pH 10.5 to 12.5)
- Range 6 (pH 12.0 to 14.0)

Each paper comes in 4.6mLx6.4mmW roll with its own plastic dispenser. Appropriate color chart mounted inside. Packed in hinged plastic box.

A-988 Box 8.25

A-989

Alkacid® Soil Tester

Measures soil pH. Determines whether soil is "sour" (pH 4 to 5), "medium" (pH 5 to 6), or "sweet" (pH 6 to 8) by 3 distinctive color changes.

Consists of 4.6mLx6.4mmW roll of Alkacid paper, transparent plastic dispenser, and manual listing over 300 plants, their pH preference, and soil treatment.

A-989Pk of 6/6.30

14-844

Litmus Paper Strips

100 strips in vial.

Type	Color Change	Cat. No.	Pk of 24 VI
Blue	Red in acid	14-844	3.00
Red	Blue in base	14-845	3.00
Neutral	Red in acid, Blue in base	14-850	3.00

14-875

Litmus Sheets

Same as 14-844 and 14-845 except sold in 25Lx20cmW sheets.

Type	Cat. No.	Per Quire
Blue	14-875	2.50
Red	14-880	2.50

14-861

Congo Red

Turns blue in presence of acid, red in presence of base. Not recommended for weak acids. Vials of 100 strips.

14-861Pk of 24 vials/3.00

A-980

Alkacid Short-Range Paper

Replacement dispensers for A-988 or for specific pH range use.

Range No.	pH range	Cat. No.	Pk of 3
1	0.0 to 3.0	A-981	3.00
2	3.5 to 5.5	A-982	3.00
3	6.0 to 8.5	A-983	3.00
4	9.0 to 11.0	A-984	3.00

FISHER[®]brand[®] **Pipets for Every** **Need:**

Educational, Industrial, Pharmaceutical, Clinical

**Manufactured under strict quality
Control**

**Made of borosilicate and white
back glass**

Individually calibrated

Tuf-Temp treatment . . .

Tops and tips of each borosilicate glass pipet (except micro pipets) are tempered to strengthen the glass and increase resistance to chipping and breaking.

Superior packaging . . .

Each pipet individually held inside carton.

Special features include:

Inexpensive white back lambda pipets you can throw away.

Dual-purpose pipets with 2 calibration lines: upper one for "To Deliver/Blow Out" and lower "To Contain".

Mohr and serological pipets with extra-long tips.

Mohr, serological, Ostwald-Folin, and volumetric pipets with fast flow-times and with Class A accuracy at the same price as less accurate pipets.

Serological pipets with extra-strong, tooled, cotton-plug tops resulting from special top forming process.

Tolerance printed on most pipets.

Special line of Culture Tek™ serological and volumetric pipets (see page 644).

Special line of enzyme pipets (see page 565).

Class A volumetric pipets meet new lab certification requirements

Properties of Glass Used in FISHER^{brand}® Pipets

	Borosilicate	White Back
Coefficient of Expansion (between 0°-300°C)	50x10 ⁻⁷ cm/cm/°C	85x10 ⁻⁷ cm/cm/°C
Softening Point	795°C	648°C
Annealing Point	570°C	463°C
Strain Point	530°C	421°C
Specific Heat (between 25°-175°C)	0.21 Cal/g/°C	0.16 Cal/g/°C
Thermal Conductivity (at 20°C)	0.0027 Cal/°C/sec/cm	0.002 Cal/°C/sec/cm
Refractive Index (Sodium D line)	1.49	1.54
Density	2.36g/cc	2.89g/cc
Visual Light Transmittance (2mm thick)	91%	—

FISHERbrand®. Available in two types of glass. Use to determine sugar in blood by the zinc hydroxide method of Hagedorn and Jensen (*Biochem. Zeit*, 135:46 and 137:92). Also, for micro Folin-Wu test for blood sugar.

With long, tapered tips. Permanent amber markings. Tolerance printed on each pipet. Calibrated to contain. Rinse out technique must be used. 11-382-10C also known as Pickard Pierce pipet.

Dye
Industry
Pipets

FISHERbrand®. Perfect for pipeting dark color dyes. White graduations and markings stand out against background of dark dye. Easier to see and read than conventional amber markings.

Volume graduations start with 0 at tip of pipet and increase to

top. Just fill pipet to desired volume and read — no time-consuming draining as with conventional pipets.

Tough borosilicate glass. Color-coded for quick, accurate identification. Catalog number, capacity, and tolerance marked on each pipet. Tuf-Temp treated.

PYREX® Brand Serologicals For Spot Testing

For VDRL and tests using spot plates and ring agglutination slides. PYREX® brand. Serological pipet with Accu-Red markings and tempered ends. Short 20cm length allows more precise control in guiding tips into small circle area and eliminates danger of tip-over in racks. Lighter than capillary tubes and somewhat faster flow rate. Has 0.500ml capac graduated into 1/100ml intervals. Tol, ±0.01ml. Color coded with yellow band.

Dropping

Dropping Pipets

13-710 Extra-Long, Dropping

Straight tube with 15ml capac rubber bulb.

Tube L	Cat. No.	Pk of 12
152mm	13-710A	7.25
203	13-710B	8.25

13-700-10 Unbreakable, Dropping

Translucent, flexible. Polyethylene dropper with neoprene bulb. Tips can be enlarged by cutting. (Nalge 6220)

Tube L	Cat. No.	Pk of 12	Case of 72
100mm	13-700-10A	5.84	31.54
145	13-700-10B	6.52	35.21

13-695 Ostwald Pipet

For Poiseuille method as described in *Practical Physical Chemistry* by Findlay. Over-all H, 215mm. With 20 and 15ml bulbs. Delivery time, 95-115sec.

13-69514.25

13-711 Medidroppers

Deliver one drop or six. Polypropylene tubes with sealed tops for easy transferring of liquid. Release pressure and take up liquid into tube. Remove from liquid and squeeze again to deliver droplets or total volume. Disposable, unbreakable, autoclavable. Eliminate use of rubber bulbs and cotton plugs. Reduce cross-contamination.

13-711Box of 1000/18.00

13-700 Medicine Dropper

Inexpensive. Straight pipet with tapered rubber bulb. Glass tube L, 76mm. Capac, 2ml.

13-700Gross/9.25

13-703 Graduated

Same as 13-700 pipets but graduated. With 2ml rubber bulb.

Grad	Cat. No.	Pk of 12
1ml	13-703A	4.25
2	13-703B	5.75

13-705 Curved Tips

Same as 13-700 pipets but with curved tips. Glass tube L, 76mm.

13-705Gross/9.25

13-701 Dropping Pipet

With 100mm glass tube and rubber bulb. Not to be confused with medicine droppers.

13-701Pk of 12/1.60
Case of 144/15.65

13-702 Stem With Bulb

Straight pipet made of heavy glass. Stem with bulb prevents liquid from entering rubber bulb at top. Glass tube L, 100mm.

13-702Pk of 12/9.10
Case of 144/97.20

13-711-5 Beral One-Piece

Bulb is integral. Repeatable controlled drop size — ideal for blood banking. Totally enclosed so there's less chance of contamination. 15cm long, holds more than 5ml of fluid. Can be gas-sterilized. 5000 pipets (10 shelf packs) per case.

13-711-5Pk of 500/15.00
Case of 5000/135.00

13-711-10 Disposable Dropper

Molded of one-piece polyethylene. Non-wetting material, tapered tip, bellows-type bulb provides excellent drop formation — 30 to 35 drops/ml. Easy to clean. Economical. Tube L, 68mm. Capac, 1.6ml

13-711-10Pk of 100/9.82
(Nalge 6219-0068) Case of 1000 88.38

Pipets

13-711-5

Disposable Serological Pipets

In Protective Canister Packs

Polystyrene and glass serological pipets are packed sterile, ready to use in protective, convenient Canister Packs, then sealed in plastic bags.

Pipets calibrated to deliver to tip. Two rings indicate that liquid in tip must be blown out, added to main volume delivered. Plugged in mouth end. Blue scales give quick identification of size and/or subdivision.

Polystyrene (Kimble 56700)

13-675-20

Fisher/Corning Serological Disposables

Available individually wrapped . . . in multi-pack . . . or in bulk pack. Convenient for small, medium, or large-volume pipet users.

Clear borosilicate glass with easy-to-read graduations, numerals. Chemically inert.

Long slender tapered tips simplify, speed pipetting. Sterile or nonsterile; cotton plugged or non-plugged.

Individually wrapped pipets ideal for small-volume use requiring sterility. Multi-pack for larger-volume use permits easy access to several pipets at a time without contaminating unused pipets.

13-675-27A through -27C multi-packs contain 10 polyethylene bags of 25 pipets each. 13-675-27D and -27E contain 20 bags of 10 pipets each.

Disposable Pipets Contd.

Serological/Measuring Pipet

Designed to measure, transfer viscous liquids, large particle size suspensions.
Graduated 10 in 1/10ml. Use top solid line for 10ml serological; top

broken line for 10ml measuring or 11ml serological.
Calibrated "To Deliver/Blow Out". Plugged. Packed 25 per bag.
13-668-50Case of 500/72.47 (Falcon® 7536)

13-668-50

Wide-Tip Serological Pipets

PYREX® brand. Won't clog when pipeting ground-up sample in microbiological work. Easy to fill and dispense viscous liquids and suspensions. Use with agar, emulsifying or anti-foaming agents, Mycelial, fermentation broth. Also

ideal for sampling finished products (such as honey, corn syrup, lotions) for microbiological tests. Tooled tops formed for cotton-plugging. Graduated at 1/10ml intervals. In sterile polyethylene bags of 10. (Corning 7078A)

13-668-80

Capac	Cat. No.	Pk of 200	Case of 400

Gold Seal Sahli A/1 Pipets

21-159-2

Calibrated to contain 20 λ with $\pm 1/2\%$ guaranteed accuracy. 46cm plastic suction tube with integral mouthpiece fits round, fire-polished end of 13cm heavy-wall glass capillary tube. Opposite, square-cut end of pipet simplifies blood collection. Pipet is color coded red.

For hematology, micro-chemistry, radioisotope and research labs, and physician's lab. 250 pipets per vial.

21-159-2 Vial/15.20
Box of 4 vial/55.15
(Clay Adams 4601)

Pipet Sterilizing Boxes

3-465

Ideal for preventing breakage of costly pipets and glass tubes during sterilization. Convenient height enables them to hold any length pipet. Use of several boxes permits segregation of pipets by size or function.

Stainless steel with snug-fitting covers. 6.4dia x 41cmH. FISHER brand®.

3-465 Ea/10.00
Case of 30/250.00

Square Sterilizing Box. 5Lx 5Wx42cmH. FISHER brand.

3-475 Ea/13.50

Pipets for Automated Hematology Instruments

MICROPET Pipets. For use with automated hematology instruments. 44.7 lambda capacity. 250 per vial, 4 vials per case.

21-164-5EE Vial/20.60
(Clay Adams 4626) Case/76.10

Suction Tube. 46cm multi-purpose rubber tube for Clay Adams MICROPET. With pipet adapter and mouthpiece.

21-164-6 Box of 10/5.10

Short-Length MICROCAPS®

Precision-made capillary glass tubing calibrated to contain definite volume from end to end. Accurate to within $\pm 1\%$. Ideal for handling dangerous materials.

Insert pipet through cap on end of rubber bulb assembly until visible through glass tube. Hole in rubber bulb permits free air circulation, to fill pipet by capillary attraction. Pipet contains stated volume when completely filled from end to end. To discharge, hold finger over hole in bulb and squeeze. To rinse, repeat operation with diluent. Packed in vials of 100.

Stainless-Steel Pipet Washer

15-350-5

Uses intermittent siphon to set up turbulent "fill-and-empty" action to wash away dirt and grime from serological and other pipets.

Place pipets with up to 7 dia x 375mmL in 13cm OD stainless-steel holder. Soak in cleaning solution. Put rack in washer for rinsing. Hot or cold water enters bottom of washer through 1/2" IP inlet. Draining through 1" IPS outlet at base.

15dia x 57cmH. With 15-350-10 pipet holder. Without cleaning jar.

15-350-5102.20

Pipet Holder. Stainless steel. For 15-350-5 and 15-350-15 washers.

15-350-1025.00

For soaking jars, see 11-823D on p 525.

Combination Washer and Dryer

15-350-15

Same as 15-350-5 washer but with 225-watt immersion heating unit. When washing and rinsing are completed, water supply is turned off and heated air circulates through cylinder. Pipets dried in 1 hr. With 15-350-10 pipet holder, without cleaning jar. 115V AC.

15-350-15146.50

Leakproof Pipet Washer

15-350-95

15-350-105

15-350-110

Linear polyethylene pipet washing system has wide range of cycling speeds with water input from 1 1/2 to 12 liters/min. Large tubing diameter permits faster cycles and allows water to drain completely. Slower cycling achieved with-

out attachments and works well on low water pressure. Water inlet eliminates back-siphoning of contaminated water into water line, even if pressure drops. With PVC tubing for inlet and outlet. (Nalge 5245)

Fisher Dilumat™ Diluter

Dilutes in 6 seconds
with $\pm 1\%$ repeatability

Adjustable dilution
ratios

One hand operation

Dispenses preset
volumes

Can operate
continuously

Fisher Model 241 Dilumat™ dilutes by adding preset volume of diluent (1 to 10ml) to preset volume of sample (10 to 50 μ l or 0.1 to 1ml); it adds set volume of reagent to set volume of sample; and, when sample syringe is set at zero, it dispenses preset volume of solution from reservoir.

Simply raise sample vessel to delivery tip and press *START* plate. Preset volume is drawn into tip and diluent syringe is simultaneously filled from external reservoir supply. When *DISPENSE* indicator lights, press *START* plate to discharge sample and diluent into receiving vial. Operates continuously at 6 to 7 second intervals just by maintaining pressure on *START* plate or op-

tional foot switch (8-758-55).

Two precision, motor-driven syringes, 0 to 50 μ l for samples and 1 to 10ml for diluent, are factory-set to deliver 250:1 dilution (5ml diluent and 20 μ l sample). Simple screwdriver adjustments enable both syringes to provide dilution ratios between 20:1 and 1000:1. Accessory 1ml sample syringe and delivery tip interchange with standard components in minutes and deliver dilution ratios between 5:1 and 100:1.

Ordering Information: Stainless-steel top deck. Teflon® coated borosilicate glass delivery tips. With two 50 μ l delivery tips, diluent and sample syringes, diluent fill tube, nut driver tool for changing

syringes, 1 oz (30ml) O-Phenanthroline Ferrous Sulfate complex for calibration. Shipping wt, 7kg (15½ lb).

13-684-490

Kimble Sampler-Diluter handles ratios up to 100:1

Consists of sampler-diluter base unit and pump assembly with either 100 to 1000µl sample and 500 to 5000µl diluent capacities. Or 10 to 100µl sample and 100 to 1000µl diluent capacities.

Ideal for RIA procedures using costly reagents in small-volume containers. Because only 1ml or less is needed for priming volume. Less than 25µl of diluent is not recovered. Also useful for atomic absorption and general chemistries. Handles acids, bases, and solvents safely.

Desired sample and diluent volumes are set on easy-to-read digital dials. Calibrated in tenths. Represent percentage of total syringe capacity. Change volumes in seconds—even while unit is running, being primed, or drained.

Sample is aspirated into sample tubing, then sample and diluent are dispensed through same tip. Sample is thoroughly washed from system by diluent. Provide positive, reproducible results accurate to ±1%.

Manual or automatic operation is selected by front control switch. In manual mode, press manual button for sample intake; press again to dispense diluted sample. Indicator buttons light when intake and dispensing operation are completed. Note: optional footswitch can be used to free operator's hands. In auto mode, unit achieves 15 pumping cycles/min

Dispenser automatically dispenses 5 reagents simultaneously

Simply insert intake tubing into as many as 5 separate reservoirs. Set volume adjustment between 50µl and 10ml for each channel (max

50ml). Unit dispenses 1 to 5 reagents into 1 to 5 separate containers at same time. Three operating modes: automatic, manual pushbutton, foot switch. Dispenser is self-primed simply by placing inlet tube in reagent and activating automatic mode. Precise reproducibility of ±0.5%. Fast — complete cycle in just 3 seconds. All tubing is outside unit for easy positioning in any spot you want. Syringe and valves are outside unit too, readily accessible for speedy, easy disassembly and cleaning.

To add reagents to diluted sample, use both instruments together When connected to controls of Sampler-Diluter, Dispenser will dispense reagents at exactly same time (and into same tube) that Sampler-Diluter dispenses diluted sample.

Ordering Information

Sampler-Diluter Model SDM-2 Attractive light blue baked enamel base unit. Without pump assembly. Pump assembly must be ordered separately. 120V 60Hz. 13-684-501970.00 (Kimble SD-01-1002)

Model DM-73 Dispenser With 3-channel syringe holder, volume adjusting wrench, instructions. 110V 50/60Hz. 13-684-490450.00 (Kimble 38500)

Pump Assemblies Consists of sample and diluent pumps and tubing, mounted on front of base. Separate from drive and volume control mechanism. Interchange or replace in seconds. (Kimble SD-02-1001 and-1002)

Compu-Pet™ 100 Pipetter-Diluter

Automatically samples, dilutes, and dispenses

Volumes from 5 μ l to 10ml

13-684-160

Multi-function pipetting apparatus picks up and discharges preset volumes of liquid. Quantities from 5 μ l to 10ml are selected on 2 pushbutton scales, 1 for pickup and 1 for delivery. Precision, $\pm 1\%$ at 50 μ l.

Compu-Pet operates as sampler to pickup and deliver reproducible volumes. As diluter, it discharges mixture of set volumes of sample and diluent, or dilutes sample to set volume. As dispenser, it delivers volumes manually or automatically in 1 to 10 second intervals.

Micro tubing with removable capillary tip handles 5 μ l to 1ml volumes. Macro tubing with aluminum handle and removable plastic tip handles 1 to 10ml volumes.

There are separate controls for manual pickup and delivery. Delivery plus pickup button samples or dispenses total of volumes on both pickup and delivery scales. Delivery interval timer permits 1 to 10sec delay between repetitive operation. Accessory switch for remote manual operation. Easily plugged into Compu-Pet.

Ordering Information: With 1 length each of micro and macro tubing, disposable plastic tips for

both, pipet probe handle, dual foot switch, flexible stand, and 56g tubing lubricant.

Dilutrol 2™ Automatic Diluter

Performs 10 dilutions per minute

Diluent volume to 10ml, sample volume to 1ml

Functions both as a diluter and dispenser for clinical tests, chemical assays, pharmaceutical labs, atomic absorption, soil analysis, and plant extractions.

Handles concentrated acids, bases, and solvents safely and efficiently. Can be coupled with complete sample preparation system.

Simple pushbutton operation. Turn plunger knobs to set sample and diluent syringe volumes. Place Teflon® dispensing tip in sample container. Depress button on dispenser head to aspirate sample. Place dispensing tip in receiving vessel. Depress button again to deliver diluent and sample together. Accuracy: sample volume, $\pm 0.3\%$ above 50 μ l (or $\pm 0.8\mu$ l whichever is greater); diluent volume, $\pm 0.5\%$ up to 10ml.

Use as dispenser only. Just set sample syringe to zero. Or simply don't pick up sample. Depress

button on dispenser head to deliver diluent.

Diluent completely washes sample from dispensing tip. Prevents cross contamination. Eliminates sample waste.

Hand-held dispensing head (attached to cabinet with tubing) is easily maneuvered to tubes some distance from instrument.

All-metal cabinet with plastic safety shield. Total Teflon® and glass dispensing system. Two precision motor-driven syringes. All parts easily removed for autoclaving. Can be steam-sterilized without disassembly. Two safety lights indicate operating position. 18Lx20Wx28cmH. 115V 60Hz. (Manostat 71-747-100 and 150)

(Oxford 486)

Oxford® Automatic Dispensor

Adjustable from 5 to 50 cycles/minute
Volumes from 0.5 to 20ml

Oxford® Automatic Dispensors dispense solvents, acids, alkalies, media, viscous fluids — in single shots or repetitively. Make 2 adjustments and you're ready to go: set number of cycles desired (5 to 50 cycles/min) and volumes to be dispensed (reproducible within ±0.5%).

Dispensor is available with 2 different valve assemblies: one corrosion-resistant polypropylene and glass and one chemically inert fluoroplastic and glass. Both are adjustable with ±0.5% precision. Two glass dispensing tips are included with each dispensor. Dispensors with polypropylene valve assemblies also include 1.2m Tygon® tubing. 115V 50/60Hz.

472C	Fluoroplastic	13-687-411	450.00

13-687-408

Automatic Pipetter

Dispenses volumes from
0.025 to 60ml

Dispenses aqueous to medium viscosity solutions at controlled speeds. For culture media, filling ampules and vials, pipetting serological and chemical reagents.

Connect syringe barrel-tip to valve system and end of plunger to rotating cam. Motorized cam pulls syringe plunger out to predetermined volume. Draws fluid into syringe through intake valve. Plunger expels fluid through output valve and tubing. Greater eccentricity of cam setting increases volume delivered.

Ten to 60 deliveries/min with 1% accuracy. $1/50$ hp ball-bearing motor needs no oiling.

Ordering Information: Green wrinkle housing 21Lx15Wx 41cmH. All liquid-contacting parts may be removed and sterilized without disassembly. Valve assembly, syringe adapters and syringes to 28ml are listed below. Special large syringes and optional foot switch available on special order. For 115V 50/60Hz, 2amp.

13-688-1486.72

Valve Assembly

Consists of intake and output valves, tubing, delivery tip connector, grooved valve pin. Stainless steel.

Low Silhouette REPIPET®
Dispensers and Dilutors

Operate by single-stroke plunger action

You can use these handy one-piece, automatic dispensing units with any reagent except hydrogen fluoride. Only glass and Teflon® contact liquids. Ideal for blood chemistry tests and variety of biological and microbiological analyses. Just set indicator for desired volume (magnifier enlarges scale for easy reading). Lift plunger all the way, wait an instant, press down all the way to deliver precise volume.

Wide mouth, 1000ml reservoir containers have two openings: one for dispensing mechanism; other for refilling. (No need to remove mechanism first.) Refill opening is ample 10cm dia to prevent spilling caustic reagents. Square shape. Stable base. Low profile. Fits easily into shelf space and refrigerators even with instruments attached. 31cm H over-all with instrument inserted. Amber glass. Teflon® cap.

REPIPET Dispensers

Dispense only. With plunger down, set indicator at desired volume. Lift plunger all the way to fill and press down gently, delivering precise volume. Accuracy, 1%. Reproducibility, 0.1%. Without air intake tubulation.

Calipers

Metric Scale

Reproducible measurements in 0 to 25mm range with metric micrometer calipers. Friction stop device causes adjustment knob to slip at the same pressure each time. Instrument reads to 0.01mm.
12-12525.00

Oxford® Dilutor

**Aspirates and delivers
20 μ l volumes
With $\pm 1\%$ accuracy**

Consists of 40 oz (1.2 liters) amber bottle with modular self-cleaning syringe. Ideal for multiple dilution work for volumes between 1.0 to 10.00ml.

Dispensing takes only a few seconds with no loss of diluent. Set indicator to desired volume. Insert sample tip into sample. Rotate sample knob to pre-set volume, drawing sample into tip. Withdraw sample tube and wipe tip. Lift delivery knob to volume setting and depress. Sample and diluent are delivered. Instrument completely flushed and ready to use again.

Rugged glass and Teflon® construction. H, 32cm. Parts are available separately.

13-687-73

Universal REPIPET® Dispensers and Dilutors

Dispense or dilute from any screw cap bottle

Handy one-piece plunger assemblies that fit any screw cap bottle with opening greater than 19mm ID or container with $\frac{1}{4}$ 24/40 or 29/42 ground glass joint.

Safely handle any reagent except hydrogen fluoride because only glass and Teflon® come in contact with reagent. Ideal for blood chemistries plus wide variety of biological and microbiological analyses.

Easy to use. Cut section of tubing long enough to reach corner of reagent bottle. Select proper screw cap from supplied assortment. Place plunger assembly on container. Tighten volume. Lift plunger and press again to deliver precise volume.

Both Universal REPIPET Dispensers and Dilutors come with 5 sets of caps and washers, magnifying indicator, integral air filter, and 56cm of Teflon® tubing. Without bottles.

Universal REPIPET Dispensers

Dispense 20 times per minute easily. Eliminate mouth pipetting. Just lift plunger to fill and depress plunger to deliver. Accuracy, 1%. Reproducibility, 0.1%.

REPIPET[®] Sampling

Accurately transfer reagents from any container

All-plastic, unbreakable transfer pipet in convenient 5 and 10ml sizes with economical disposable tips. Reproducibility: $\pm 0.5\%$.

Dispensette® Bottle-Top Dispensers

Fit standard reagent bottles

Easy to operate — just set desired volume by moving pointer along graduated scale, tighten thumbscrew. Then raise cylinder sleeve fully and depress it all the way down. Reproducibility, 0.1%; accuracy, $\pm 1\%$. Usable with any chemical except hydrofluoric acid.

Clean, simple lines — no external tubing, valves, or springs to break off. Dispensette is no wider than the bottle you mount it on.

Unbreakable and corrosion-resistant Tefzel® valve head, borosilicate glass cylinder, polished ball valves. Autoclavable to 120°C without disassembling. With amber reagent bottles having standard 33mm

threads. (Sizes under 5ml also supplied with 28mm adapter for 500ml bottles.)

Available in 3 adjustable volume models.

Handle 1 to 10ml with $\pm 0.5\%$ full scale precision

For clinical, pharmaceutical, food, petrochemical, water/wastewater, and non-clinical labs.

Simple thumb-operated plunger. Reverse and forward plunger modes permit transfer of viscous and aqueous fluids. Uses disposable tips. Safer, cleaner, more accurate than pipetting by mouth. (Oxford 8900 and 8905)

Capac	Cat. No.	Ea
1-5ml	21-195	69.00
5-10	21-196	69.00

Non-Sterile Tips

Non-wettable, polypropylene tips for 21-195 and 21-196 Macro-Sets. Eliminate expensive pipet cleaning since they are economical enough to be disposable. Cross-contamination and technique variation are avoided. (Oxford 814 and 15)

For System	Color	Cat. No.	Pack of 250
21-195	White	21-195-3	15.00
21-196	Blue	21-196-1	15.00

Sterile Tips

For use with 21-195. Polypropylene, disposable. Individually wrapped tips sealed in polybag, then placed in another container.

Oxford® Series 8000 Sampler® Micro-Pipetting Systems

- Dispense micro volumes with $\pm 1\%$ accuracy and reproducibility
- Single-range and multi-range capacities

Available in 10 single range capacities and 8 multi-range capacities with two or three calibrated volumes.

Operation is simple. Apply tip to sampler. Depress plunger knob to first position. Immerse tip into sample solution. Return plunger to top release position allowing solution to enter tip. Remove tip from sample. Place tip against side wall of receiving vessel. Depress plunger to first position. Pause, then depress knob to lowest position to remove trace amounts of solution in tip. With knob in same position, withdraw tip from vessel. Return knob to release position and remove used tip.

On multi-range samplers, volume selections are made by fully depressing plunger to lowest position and rotating plunger handle to desired volume.

With maintenance kit including spare O-rings, lubricant, and cleaning wire. Without combination plastic tip-loading tray and instrument stand; tip extractor; and colored disposable tips.

Single Ranges (Oxford 8001-8500)

Other single-range Oxford Micro-Pipetting Systems in 5, 15, 30, 40, 60, 70, 75, 80, 90, 120, 150, 400, 600, 700, and 750 μ l are available on special order.

Oxford® Model Q Sampler® Micro-Pipetting Systems

Handle viscous and aqueous fluids
Volumes from 10 μ l to 1ml

Ideal for hepatitis tests, bacteriology, tissue culture, radioimmunoassay, microchemistry, and quality control applications.

Safety-tip release provides extra operator protection. To release disposable tip, gently twist ejector knob located on barrel of sampler.

Two-stop plunger action permits complete delivery of sample. Forward mode operation (for aqueous materials only) same as Series 8000 Micro-Pipetting System. Reverse mode provides accurate delivery of viscous materials. Depress plunger to lowest stop before intake to draw in excess liquid. Depress plunger to primary stop to deliver rated volume.

Sampler reaches bottom of 150mm cuvetts and 100mm tubes with ID openings as small as 8mm. Uses disposable non-wetting sampler tips. Guaranteed for one year. (Oxford 9010 through 9500)

Sherwood Lancer Pipetters

Accurately dispense from 10 to 500µl

Lightweight color-coded pipetters deliver single precalibrated micro volumes with ease. Eliminate possibility of accidental volume errors. Permit hours of fatigue-free use. Easy pushbutton operation. Depress button to first positive-stop. For uptake, release plunger to draw calibrated amount of sample into disposable tip. Depress button to second positive-stop for complete dispensing of sample. Reproducibility, ±2% for 10µl; ±0.5% for 500µl. Special O-rings provide friction-free piston movement with positive seal. Pipetter tip with

dual airway channels eliminates danger of sample being drawn into pipetting mechanism. Anodized aluminum barrel resists corrosion. Capacity marked on barrel.

Fisher/MLA Pipetting Systems

Precision "D-Tipper" Pipets

With built-in tip removal mechanism

Deliver solutions fast and accurately. Eliminates cross-contamination and time-consuming washing chores.

Keep tray of tips on your bench. Insert pipet nozzle into tip and push down to seal tip onto nozzle. To pick up sample, depress plunger inset tip into sample and gently release plunger. To deliver sample, depress plunger and touch tip to side of receiving vessel. When operation is complete discard tip by pushing upward on pipet bonnet. All this with just one hand. Ideal for handling hazardous or contaminated fluids.

Color-coded stainless-steel and aluminum pipet with epoxy finish. Capacity permanently engraved on metal bonnet.

21-170-10

Microdispenser

Delivers sample volumes from 1 to 5µl

Simple, one-hand operation. For 5µl volumes, depress graduated plunger until stainless-steel wire extends beyond end of bore. Insert bore into sample and release plunger. Syringe automatically fills to exactly 5µl. Depress plunger to barrel for delivery of full volume. Dispense in 1µl increments by depressing plunger to appropriate graduation.

For instantaneous delivery of 1 to 4µl amounts, use 1 to 4 spacers on plunger. Spacers are easy to insert on plunger assembly. Remove finger pad. Unscrew end cap and remove. Slide spacer over plunger. Replace cap and finger pad.

With stainless-steel plunger. With 100 disposable glass bores.

21-170-1035.00

Replacement Glass Bores

For 21-170-10 microdispenser. Easy to replace. Loosen aluminum knurled collet. Discard bore. Insert new bore on plunger. Tighten collet.

21-170-11Pk of 100/5.50

21-170-15

Microdispenser

From 1 to 100µl within ±1%

Dialomatic ideal for error-free micro-pipetting jobs. Permit accurate fractional deliveries.

Simple to use. Depress graduated plunger until stainless-steel wire extends beyond end of bore. Insert bore into sample and release plunger. Syringe automatically fills. Depress plunger to deliver.

Aluminum construction with Teflon® plunger. Two scales on 10 and 100µl sizes to simplify volume selection. With 100 disposable glass bores. In convenient plastic case.

13-789

Polyscience Polarimeter

Accurate to 0.1° over 180° range

Accurate determinations of optically active materials. Handles sugar, protein, and other optically active substances.

An optically active material rotates a light beam passed through it. This polarimeter accurately measures rotation in degrees. Vernier and magnifier directly indicate percent concentration.

To test, simply place sample in test tube between source lamp and analyzer. Focus 3-power magnifier until field of measurement appears as two half-shadows (balanced in brightness). Read angle of rotation from graduated scale. Model SR-6 is accurate to $\pm 0.1^\circ$ over the 180° range using integral vernier. Mean setting errors are as low as $\pm 0.03^\circ$.

Clouding or slight coloration of test sample won't affect accuracy or clear observation of sample.

Direction of light beam rotation is easily determined from half-shadow position. If half-shadow is on right, rotation is to right . . . if on left, rotation is to left.

SR-6 accommodates measuring tubes of various lengths (200mm max-

imum). Tubes have larger diameter at one end to collect air bubbles. This prevents optical disturbance in measuring field.

Sodium source lamp in SR-6 enables instrument to make precision measurements over wide range of rotations. It provides necessary monochromatic light in combination with built-in orange filter (589nm).

Ordering Information: Model SR-6 is 41Lx13Wx30cmH. Weighs 2.7kg (6 lbs). With 3-wire cord, sodium lamp, circular scale (0°-90°, right and left), magnifier, vernier, transformer (115V 60Hz), and 200mm measuring tube (13-792-2A).

13-792

Zeiss Polarimeter

Accurate to $\pm 0.05^\circ$ over 360° range

Measure light beam rotation caused by sugars, proteins or other optically active materials in solution, $\pm 0.05^\circ$ accuracy over 360° range. Estimate results to $\pm 0.025^\circ$ with vernier.

Easy to use. Place tube with liquid sample in instrument. Flip light switch for source beam. Adjust image in eyepiece to match for equal shade. Read scale for results. When matching for shade, image rotates in direction of optical activity.

No visibility problems caused by turbid samples. Eyepiece on polarimeter inclined at comfortable viewing angle.

Instrument employs yellow source light in combination with a 589nm filter

Light can be either frosted 40w bulb or sodium spectral lamp. Sodium lamp with choke is recommended for measuring rotations greater than 10°.

Ordering Information: 41Lx13Wx37cmH. 115V 60Hz. With protective dust cover, sodium lamp (13-795-2) and 589nm filter. Without measuring tubes. (See below.)

Portable Potentiometers

Measure and generate accurate potentials
For field, factory, and student use

Field and Factory
Potentiometers

10-step and 8-step models

Measure potentials easily and accurately in field or factory with Biddle portable potentiometers (13-852 or 13-856).

They measure potentials (emf) of galvanic cells, electrode pairs, thermocouples and other sources by matching unknown with voltage drop across accurately known resistance. When null meter balances, potentials are identical and value is read on step-switch and slidewire dial to $\pm 0.05\%$.

You can also use them to generate known potential, with special output circuits.

There are 2 pairs of emf binding posts and toggle selector switch, so you can compare 2 sources or measure them alternately.

Both models have 2 switch-selected ranges. On high range (X1) read switch and slidewire settings directly. On low range (X0.1) use $\frac{1}{10}$ of value. Slidewire has 220 divisions. Detector sensitivity (to $5\mu\text{V}$ per division) selected to provide maximum performance for range in use.

Potentiometers are battery-powered. Have integral null meter. Solid-state circuits and taut-band mounting withstand overloads and shocks that would damage galvanometers. Reliavolt[®] Voltage Supply is a battery powered, solid-state constant-voltage supply which replaces the standard cell thus eliminates the standardization function. Impact-resistant cases with carrying handle and removable cover.

13-852 and 13-856 differ only in ranges and number of steps on switch. Both equipped with manual reference compensator for ambient temperature correction when used with thermocouples. Specifications, and those of 13-850 student model, given in table.

Student Potentiometer

Biddle Student Potentiometer (13-850) is simple and versatile. Great for demonstrating how potentiometers work and what you can do with them. Operates on 2 No. 6 dry cells, and uses separate galvanometer to find null balance point

Uses rotary step-switch and slidewire dial to read potentials. Three ranges are selected by connection to appropriate (1.0, 0.1, 0.01) binding post. Using other binding posts, use instrument as wheatstone bridge (slidewire has special bridge scale), or to supply accurately measured resistance

Potometer Determines transpiration rate of plants

Borosilicate glass assembly measures water absorbed by a cut plant shoot. Consists of reservoir, glass stopcock, graduated horizontal tube. Graduated from 0 to 0.2ml in 0.02ml divisions.

2-860A38.50

Base for Potometer

Finely polished wood. Supports device in upright position.

Pk of 3/18.90

Lab Press

Generates 11 metric tons pressure

13-872

Self-contained hand-operated unit with its own oil pump, reservoir, and dual-scale gauge calibrated to 11 metric tons (11,000kg) in 100kg divisions and to 24,000 lb in 200 lb divisions. Pressing faces are 15cm square. Upright columns are 19cm apart. Maximum distance between plates is 41cm. Adaptable for use in pressing oils, separating liquids from solids, filtering, plastic molding, compression and crushing tests.

Ordering Information: Includes steel, aluminum, and iron construction. Lab press with "Quad Ring" packings with nylon back-up prevents leaks; short hand levers to permit low force work; longer extensions for applying higher forces. 41Lx38Wx91cmH. Net wt, 64kg.

13-872.....525.00

Accessories for Lab Press

Cage, Plate, and Cloth Equipment

For pressing liquids out of semi-solid materials. Complete set of felt and steel discs, trays, bulk-type syringe and mounting hardware.

13-872-10240.00

Plate and Cloth Equipment

For pressing soft materials. With forming frame, filter cloths, wire gauze squares.

13-872-2030.00

13-872-30

Heated Platens

Plastic molding and hot pressing accessory. Two 15x15cm aluminum heated platens thermostatically control temperatures from 150° to 500°F (66° to 260°C). Both have built-in bimetallic thermometers with °F markings. With control boxes. For 13-872 press. Thermometer with °C markings available on special order.

115VAC model

13-872-30Pr/175.00

230VAC model

13-872-31Pr/175.00

Swivel Bearing Plates

For crushing and breaking tests. Accessory on standard 5cm cubes or 5x10cm cylinders. Upper plate has ball swivel to exert pressure evenly over entire sample surface.

13-872-40Pr/60.00

Metallurgical Mounting Presses. See pp 762-763

Parr Self-Stirring Mini-Reactors

● Pressure to 2000 psi (14kg/cm²), heat to 350°C

● Working capacities to 450ml

Benchtop, stainless-steel bombs. Control chemical reaction working pressures to 2000 psi (14kg/cm²) and temperatures to 350°C. Built-in stirrer assures uniform dispersion of suspended solids and thorough mixture of gas and liquid phases. Valves allow adding and releasing gases under pressure or removing liquid samples.

Ideal for pressure reactions such as alkylation, catalytic reduction, hydrogenation, oxidation, sulfonation.

Metal-cased quartz fabric heating mantle fits bomb cylinder snugly. Mantle temperature is maintained automatically by a solid-state potentiometric controller. Panel meter continuously indicates bomb temperature.

Direct stirring system with self-sealing packing gland rotates propeller at fixed speed of

600rpm. Efficient bomb seals ensure quantitative hydrogen retention.

Internal cooling loop, detachable from bomb, circulates water or compressed air. Controls exothermic reactions or cools bomb contents at end of run.

Ordering Information: Includes 2000psi gauge with safety rupture disc, gas inlet and outlet valves, liquid sampling valve, 1/15 hp stirring motor, heating mantle, temperature controller, spare parts and fittings. 120V 60Hz.

Pump Only. Same as 1-096 pump but without base, motor, belt.

1-097.....265.00
(Welch 1400)

Two-Stage Pump

1hp motor, large free air capacity

Large capacity two-stage pump has 1hp motor. Free air capac, 500 liters/min. Guaranteed vacuum, 1×10^{-4} torr Hg. Intake connection requires 38mmID rubber tubing. Oil capac, 1.2 liters. Mounted on steel base.

Ordering Information: With vented exhaust, 2 matched V-belts, extra pump oil, pulleys, belt guard. 65Lx33Wx48cmH. Shipping wt, 102kg(225 lb). 115V 60Hz.

1-100-151125.00
(Welch 1397B)

1-100-15 pump can be supplied for 115V 50Hz on special order. Price on request.

Two-Stage Pump

1/2hp motor; for vacuum drying, freeze drying, backing diffusion, and vacuum distillation

Two-stage vacuum air pump with 1/2hp motor and vented exhaust which eliminates condensed vapors which would otherwise cause corrosion and shorten pump life. Fewer oil changes are needed; oil filters and separators are eliminated.

Free air capac, 160 liters/min at 525rpm.

Guaranteed vacuum with vent closed, 1×10^{-4} torr Hg. Intake connection requires 19mmID rubber tubing. Oil capac, 2.1 liters.

Ordering Information: Mounted on steel base. 50Lx29Wx40cmH. With V-belt, belt guard, and oil. Shipping wt, 57kg(125 lb). 115V 60Hz.

1-100.....660.00
(Welch 1402B)

Two-Stage Pump

1/2hp motor, guaranteed vacuum

Same as 1-096 pump except with 1/2hp motor which produces 525rpm. Free air capac, 60 liters/min. Guaranteed vacuum, 1×10^{-4} torr Hg. Intake connection requires 13mm ID rubber tubing.

Ordering Information: Mounted on steel base. With V-belt, belt guard, belt-tightening

device, supply of oil. Shipping wt, 48kg(106 lb). 115V 60Hz.

1-099.....540.00
(Welch 1405B)

Dist-O-Pump

Single-stage, economical 1/3hp motor

Single-Stage Dist-O-Pump features 1/3hp motor with vented exhaust. Exhaust vent open for condensable vapors, or closed to achieve max vacuum at 750rpm. Free air capac, 35 liters/min. Guaranteed vacuum, 1.5×10^{-2} torr Hg. Intake connection requires 9.5mmID rubber tubing.

Ordering Information: Mounted on steel base. 43Lx24Wx30cmH. With V-belt, belt guard, and pump oil; without pressure cross.

Shipping wt, 25kg(55 lb). 115V 60Hz.

Two-Stage Air Pump

For electron tube evacuation, dehydration, sublimation, transistor and semi-conductor production

Two-stage air pump with 1hp motor and vented exhaust. Free air capac, 300 liters/min. Guaranteed vacuum with vent closed, 1×10^{-4} torr Hg. Intake connection requires 38mmID rubber tubing. Pump speed: 525rpm. Oil capac. 2.4 liters.

Ordering Information: Mounted on steel base. 50Lx34Wx39cmH. With V-belt, belt guard, and extra pump oil. Shipping wt, 78kg(172 lb). 115V 60Hz.

1-106.....960.00
(Welch 1376B)

Above pump can be supplied for 115V 50Hz on special order. Price on request

Rotary Vacuum Pump

3hp motor . . . at home in lab or plant

Oil-sealed, rotary vacuum pump with vented exhaust and 3hp motor is suited for industrial and lab applications requiring high pumping capacity and low pressure. Free air capac, 1500 liters/min. Guaranteed vacuum with vent closed, 1×10^{-4} torr Hg. Pump speed, 245rpm. Oil capac, 2.4 liters.

Ordering Information: Mounted on steel base. 112Lx53Wx94cmH. With extra oil, belt guard, 4 V-belts, flanged intake port with O-ring seal. Shipping wt, 300kg(661 lb). 230/460V 60Hz. 3-phase.

1-181.....3250.00
(Welch 1398M)

Oil Diffusion and Mechanical Pump

1/3hp motor, two-stage diffusion pump

Two-stage, all-metal, oil diffusion pump mounted on steel platform with high vacuum mechanical pump. Both pumps together produce 1×10^{-6} torr Hg quickly without use of cold trap. Intake connection requires 9.5mmID rubber tubing. Pump capac at $0.1 \mu\text{m}$, 600 liters/min. Free air displacement, 25 liters/min.

Ordering Information: Motor and pump units mounted on steel base 43Lx 22Wx46cmH. With diffusion pump oil. 1-104 mechanical pump oil, 1/3hp motor, V-belt, and belt guard. Shipping wt, 33kg(72 lb). 115V 60Hz.

1-102.....785.00
(Welch 1392)

Above pump with 120 to 6000 liters/min capacity available on special order.

DirecTorr™ Vacuum Pumps

Perform in either vertical or horizontal position

Air-cooled, oil-sealed rotary vane pumps are lightweight, compact, and portable. Operated in horizontal position or in any vertical position with motor above pump.

Each pump has 2-stage construction rated at 50, 100, or 150 liters/min. Guaranteed vacuum produced: 1×10^{-4} torr Hg. Both pump and motor units yield speeds of 1725rpm. All models require 19mm ID tubing for intake connection.

Non-porous die-cast aluminum construction. Pump unit and motor mounted on opposite sides of central plate. Oil case and motor removed independently. Vented exhaust reduces partial pressure of condensable vapors and prevents condensation in pump. Cam-operated sealed plunger restricts atmospheric inrush of oil. Fitted with vacuum-tight accessories for helium transfer applications. With rubber grip handle.

For clamps, see 14-199 on p 196.

Special Purpose VacTorr® Vacuum Pumps

1-183-10

Ideal for Demonstration Lectures, Experiments, General Utility Lab Work

Model S-35 single-stage vacuum pump has vented exhaust and 1/3hp motor. Free air displacement, 35 liter/min. Guaranteed vacuum, 15×10^{-3} torr Hg. Motor speed, 1725rpm. Pump speed, 600rpm. Oil capac, 709ml. Connection for 13mm ID tubing.

Ordering Information: Nickel-content cast-iron alloy stator and rotor. Belt guard is standard. 37Lx25Wx27cmH. Net wt 18kg; shipping wt 25kg (56 lb). 120V 60Hz.

1-183-10320.00
(Precision 10011)

Pressure-Vacuum Model. Model PV-35, same as 1-183-10 pump but has connections for 6.4mm ID tubing. Connect to exhaust for up to 1.05 kg/cm^2 .

1-183-20326.00
(Precision 10021)

1-183-31

Best for High Vacuum Evacuation of Small Chambers

Model D-25 is two-stage pump with 1/3hp motor and vented exhaust. Free air displacement, 25 liter/min. Guaranteed vacuum, 1×10^{-4} torr Hg. Motor speed, 1725rpm. Pump speed, 600rpm. Oil capac, 496ml. Connections for 13mm ID tubing.

Ordering Information: 36Lx25Wx25cmH. Belt guard is standard. Net wt 22kg, shipping wt, 28kg (61 lb). 120V 60Hz.

1-183-31380.00
(Precision 10282)

1-183-42

For Medium-Size Leak Detectors, Electron Microscopes

Model D-75 is two-stage pump which meets requirements for capacity and ultimate vacuum in the average lab. Has 1/3hp motor, vented exhaust. Free air displacement, 75 liter/min. Guaranteed vacuum, 1×10^{-4} torr Hg. Motor speed, 1725rpm. Pump speed, 600rpm. Oil capac, 1.2 liters. Connections are for 19mm ID tubing.

Ordering Information: 42Lx25Wx29cmH. Belt guard is standard. Net wt 30kg; shipping wt, 36kg (80 lb). 120V 60Hz.

1-183-42540.00
(Precision 69076)

1-183-90

Ideal Backing for Diffusion Pumps

Model D-500 is two-stage pump useful in molding, canning, sintering. Has 1hp motor, vented exhaust, and belt guard. Free air displacement, 500 liter/min. Guaranteed vacuum, 1×10^{-4} torr Hg. Motor speed, 1725rpm. Pump speed, 400rpm. Oil capac, 10 liters. Connections are for 25mm ID tubing.

Ordering Information: 52Lx42Wx55cmH. Belt guard is standard. 240V 60Hz.

1-183-901125.00
(Precision 10122)

1-183-52

Suitable for Industrial Service and Numerous Lab Chambers

Model D-150 is two-stage pump used for leak detectors. Has $\frac{3}{4}$ hp motor and vented exhaust. Free air displacement, 150 liter/min. Guaranteed vacuum, 1×10^{-4} torr. Motor speed, 1725rpm. Pump speed, 600rpm. Oil capac, 3.3 liters. Connections for 19mm ID tubing.

Ordering Information: 42Lx30Wx33cmH. Belt guard is standard.

1-183-52660.00
(Precision 69151)

Accessories for VacTorr Pumps

Pump Cart

Provides mobility for pumps which must serve several labs. Steel platform with baked silicone enamel finish. 36Lx46Wx31cmH. Mounted on 4 rubber casters. For 1-183-10, 1-183-20, 1-183-31, 1-183-42, 1-183-52 pumps.

1-184-6093.50
(Precision 69059)

Smoke Eliminators

Eliminate oil mist at exhaust ports. Easily and quickly installed. For 1-183-10, 1-183-20, 1-183-31 pumps.

1-184-3641.25
(Precision 69052)

For 1-183-42 and 1-183-52 pumps.

1-184-3841.25
(Precision 69053)

1-184-36, 38

Vacuum Pump Oil

High purity, mineral based oil with extremely low vapor pressure and excellent lubricating properties. Quart (946ml) size in plastic bottle with handle. Gallon (3.8 liters) sizes in cans. (Precision 69100)

Size	Cat. No.	Ea	Case of

1-182

VacTorr® Direct-Drive Vacuum Pumps

Portable, quiet, efficient

Compact — without belts, pulleys, or other external moving parts. Keep noise and vibrations well within OSHA requirements.

Three models: (1) **Model DD-20** has free air capacity of 20 liters/min and vacuum capacity of $5\mu\text{m Hg}$. (2) **Model DD-50** delivers free air displacement of 50 liters/min and has $0.5\mu\text{m Hg}$ ultimate vacuum capability. (3) **Model DD-100** displaces 100 liters of free air per minute and produces $0.5\mu\text{m Hg}$ vacuums. Explosion-proof models are also available.

All are ideally suited for direct evacuation, vacuum drying, filtration, impregnation, extraction, concentration, centrifugation, freeze-drying, degassing, cryogenic studies, vacuum coating and deposition, and thick and thin film processes. Useful with diffusion pumps, mass spectrometers, leak detectors, residual gas analyzers, and electron micro-

scopes.

No need to change any pump component. Adjustable gas ballast provides efficient pumping of water vapors. Minimizes contamination of pumping fluid and corrosion of pump interior.

VacTorr pumps retain high percentage of atmospheric capacity. For example, Model DD-100 weighs just 20kg, yet pumps 65 liters per minute at $1\mu\text{m Hg}$. Or 65% of free air capacity. Model DD-20 weighs 8kg, and pumps 10 liters/min at $100\mu\text{m Hg}$ (50% efficiency factor); Model DD-50 weighs 18kg and pumps 30 liters/min at $1\mu\text{m Hg}$ (60% efficiency factor).

Cast-aluminum housing. Baked enamel finish. Thermally protected motor. Adjustable gas ballast. Oil sight. Oil drain. Carrying handle.

Conversions:

1×10^{-4} torr = 0.1 millitorr = 0.1 micron = 0.001 mm Hg.

100 liters/min = 3.5 cubic feet/min

For rubber tubing to fit intake connection, see 14-182 on p 1203.

For clamps, see 14-199 on p 196.

1-092-25

Pressure/Vacuum Pumps

For non-corrosive dry gases

Little Giant Pressure/Vacuum Pumps with 1/6hp motors. Produce max pressure of 4.2kg/cm² or vacuum of 61cm Hg. For air sampling, pressure/vacuum filtration, degassing solutions. Use with therapeutic equipment and flame photometers.

Separate vacuum and pressure gauges, graduated from 0 to 7kg/cm² and 0 to 76cm Hg respectively. Durable air seal between piston and cylinder. Only maintenance required is semi-annual replacement of felts.

Ordering Information: With moisture trap, intake filter, handle, rubber suction-cup feet. 38Lx18Wx33cmH.

For 115V 60Hz. Free air flow, 34 liters/min.
1-092-25149.00
(Gelman 13154)

For 230V 50/60Hz. Free air flow: at 50Hz, 28 liters/min; at 60Hz, 37 liters/min.
1-092-26175.00
(Gelman 13156)

1-093

Portable Combination Pressure/Vacuum Pumps

Produce pressure up to 1.8kg/cm² for intermittent service and 1.1kg/cm² for continuous service. Also, pull vacuum as high as 69cm of Hg. Free air displacement 37 liters/min. Free air delivery, 28 liters/min at 0.7kg/cm². 1/6hp ball-bearing motor. Single shaft for both motor and pump rotor.

Ordering Information: With combined oiler and intake filter, visible oil trap, 2 serrated hose connections for 6.4mm tubing. 36Lx20Wx23cmH. Without gauges, regulators, or handle. Net wt 10kg(22 lb). 115V 60Hz.
1-093.....155.00

With Gauges, Regulators, Handle

Same as 1-093 pump except with 5cm pressure gauge calibrated from 0 to 30 lb (0 to 14kg); 5cm vacuum gauge calibrated from 0 to 30" (0 to 76cm) of Hg; regulator; and handle.

For 115V 60Hz.
1-093-5195.00
For 230V 50Hz.
1-093-8185.00

1725rpm Ball Bearing Motor

Same as 1-093-5 pump except with 113 liters/min free air displacement and free air delivery of 91 liters/min at 1.1kg/cm². Fan-cooling, self-adjusting shaft. Lubricator, exhaust trap, vacuum and pressure gauges, bleeder, hose nipples. Intake filter with 10μm filter element. 46Lx23Wx28cmH. Net wt, 15kg(32 lb). 115V 60Hz.

1-094.....200.00

Driven by 3/4hp Motor

Same as 1-094 except has free air displacement of 204 liters/min and free air delivery of 147 liters/min at 1.4kg/cm² continuous service. Pulls vacuum of 69cm of Hg continuously. Operates intermittently 1.8kg/cm² with free air delivery of 133 liters/min. With gauges, bleeder valve, hose nipples, intake filter with 10μm filter element, handle. 51Lx28Wx33cmH. Net wt, 24kg(53 lb). 115/230V 50/60Hz.

1-094-10315.00

Budget-Priced Pressure/Vacuum Pumps

1-092-5, 10, 15

With 1/82hp Motor

Dyna-Pump® produces max pressure of 0.7kg/cm² or vacuum of 31cm of Hg. Capac, 3.7 liters/min at 0.14kg/cm². Self-regulating 1/82hp motor connected directly to diaphragm drive. Draws 48 watts. With 2 serrated hose connections. 16Lx9.2Wx11cmH. Net wt, 2.5kg. 115V 60Hz.

1-092-580.00

With 1/25hp Motor

Same as 1-092-5 pump but with 1/25hp motor. Produces max pressure of 1kg/cm² or vacuum of 36cm of Hg. Capac, 7 liters/min. Draws 78 watts. 18Lx9.2Wx11cmH. Net wt, 2.7kg. 115V 60Hz.
1-092-1088.00

With 1/53hp Motor

Same as 1-092-5 pump except with 1/53hp motor. Produces max pressure of 1.3kg/cm² or vacuum of 46cm of Hg. Capac, 9.8 liters/min. Draws 70 watts. Net wt, 3.2kg. 18Lx9.2Wx12cmH. 115V 60Hz.
1-092-15100.00

Above pumps available for operation on 230V 50Hz on special order.

Pumps with stainless-steel base and pump chamber also available on special order.

Accessories for Pressure/Vacuum Pumps

Vacuum Plate, Bell Jars

Heavy ground-glass plate 25cm dia cemented on low cast-iron base for bell jar or other vessels to be evacuated. Vent hole in plate center fitted with guard plug. Oil-sealed taps for inlet of air and manometer for 9.5mm bore rubber tubing.

1-050 105.00

1-050

Pressure Regulator

Maintains constant pressure in evacuated systems. Consists of tube assembly with stopcock supported by metal support. Bottom of tube is filled with mercury or butyl phthalate. Height of liquid above inner tube determines pressure in system. Mercury range, 50 to 2mm with ± 0.05 mm sensitivity. Without mercury, butyl phthalate, clamp holder.

1-089 40.00

1-089

Cartesian Manostat

For accurate, automatic control of vacuum or pressure. Glass Cartesian manostat with three-way glass stopcock. Minute changes in control with special screw and lock nut arrangement. Once vacuum is set, system can be shut down without disturbing manostat setting. Without mercury, approx 12ml required.

1-091-20 98.00

1-091-20

Hand-Powered Blower

Provides continuous stream of air at low pressure. Hand-powered blower consists of tube bulb and 61cm outlet tube. Net-covered second bulb serves as reservoir. For use with blowpipes and other small apparatus. Made of pure grade rubber. Over-all L, 86cm

2-680 15.50

2-680

Vacuum Leak Detector

High frequency, self-contained tester consists of an adjustable interrupter, vibrating spark gap, condenser, resonator coil and gap tip. Adjustment made with knob at end of handle. With special terminal electrode. 115V 25-50Hz

15-340-75 Ea 25.25
Base of 130.75

15-340-75

Squeeze Handle Vacuum Pump

Hand-operated styrene vacuum pump with gauge produces two-way pumping action for transferring liquids in either direction. Gauge monitors vacuum in both centimeters and inches of Hg. Pumping rate: 15ml/stroke. Fitted with valve to release vacuum without disconnecting pump from line. Nozzle fits 6.4mm tubing.

Ordering Information: Sealed, self-lubricating, corrosion-resistant. With 61cm length of 6.4mm ID vinyl tubing.

1-070 Ea/22.50
(Nalge 6130) Case of 4/81.00

Without vacuum gauge. Same as 1-070 pump but without gauge. Ideal for field use.

1-071 Ea/17.50
(Nalge 6131) Case of 4/63.00

Vacuum/Pressure Hand Pump

Rugged pump with double grip handle. 36cm stroke. Brass cylinder nickel plated, 5.4cm dia. Pressure and vacuum hose connections with check valves. Mounted on oak base. 11Lx31cmW. Over-all H, 55cm.

1-055 61.00

New Metric Conversion Computer

A full function calculator complete with memory. Instant, accurate answers for 126 types of metric conversions. Simply enter metric or U.S. units, press convert key, read exact answer with decimal point in place. Converts length, area, weight, volume, liquid measure, temperature.

As a calculator, it adds, subtracts, multiplies, divides. Has fully addressable memory and memory recall. Also: overflow indicator, % key, negative indicator, chain calculation capability, floating decimal, 8 digit logic, and bright LED display.

Ordering Information: With nickel-cadmium battery, 115V adapter and recharger, carrying case, and instructions. Wt, 0.16kg (5.5 oz). Size: 10x8cm.

12-099 49.50

Liquid Pumps

FISHERbrand® Circulating Pump

FISHERbrand® circulating pump has capacity of nearly 19 liters/min at zero head. At heads of 2.4, 1.8, and 0.9m, capacities exceed 3.8, 5.7, 7.6 liters/min respectively. Circulates oil as heavy as 20 SAE.

Ordering Information: Bronze and brass construction with mounting feet and serrated extension for 6.4 to 13mm tubing. H (to bottom of motor), 23cm. Over-all H, 34cm, 115V 60Hz.
13-874-8068.40

Self-Priming Pump

Self-priming pump produces constant oscillated pumping action. Pumps chemicals from carboys or drums. Convenient for experimental laboratory work.

Pump action accomplished by armature acting against spring. Silicon rectifier feeds impulses to coil 3600 times per min, which causes armature to oscillate. Hypalon impeller attached to armature oscillates at same speed. Check valve inside impeller opens and closes with each oscillation creating pumping action. Flow may be regulated with variable resistance in electrical circuit.

Ordering Information: Stainless-steel base with mounting feet. Hose connections for 9.5mm ID tubing. 22Lx 8.7Wx6.6cmH. 115V 60Hz.
13-874-8246.40

Economical Little Giant Pump

Economical pump delivers 1137, 890, or 796 liters/hr to heights of 31, 91, and 152cm respectively. Fan-cooled heavy-duty motor runs on bronze bearings and drives stainless-steel one-piece shaft with screw-on impeller. Special 90° hose adapter takes 9.5, 13, 18, and 22mm ID tubing.

Ordering Information: Moisture-proof windings, large oil reservoir, high-impact, corrosion-proof base. 22Hx11cm dia. 115V 60Hz.
13-874-88Ea/18.00
(Gelman CP-5000)Pk of 6/97.15

Midget Circulating Pump

Midget circulating stainless-steel pump for use with dilute hydrochloric and sulfuric acids, alkaline solutions, brines, halogenated solutions, and various organic liquids. Pumps up to 27 liters/min with 1.2kg/cm². For light intermittent duty applications.

Ordering Information: 1/20hp universal motor with armature and impeller mounted on one shaft. Light; 1.5kg. Portable; 18Lx8.9Wx8.3cmH. With serrated hose connections for 13mm rubber tubing. 115V AC/DC.
13-874-93128.98
(Eastern B-1)

Small Submersible Circulating Pump

13-874-85

Little Giant Submersible Pump delivers water at 11 liters/min at zero head and 6.4 liters/min at 152cm head. Able to lift water 216cm. Can be used as agitator or stirrer. Not recommended for use with hot liquids which might overheat motor.

Ordering Information: Waterproof motor with 8 bladed nylon impeller and cover. Nylon strainer, 1/4" threaded male outlet. 10Hx10cm dia. 115V 60Hz.

13-874-85Ea/30.00
Pk of 6/162.00

13-874-13

Magnetic Drive Pumps

Polypropylene, leak-free

These seal-less polypropylene open impeller centrifugal pumps work well for film processing, filtration, electroplating systems, and many other chemical and industrial services. Ideal for pumping both mild and corrosive chemical solutions.

When the motor is turned on, two drive magnets attached to motor shaft rotate around rear casing. Two other magnets on impeller inside the rear casing begin to rotate due to magnetic field produced. In turn, the impeller moves, causing liquid to be pumped through outlet.

Totally enclosed ball-bearing motor equipped with thermal protectors but without rotating shaft seal. Polypropylene casing and impeller. Motor speed: 3450/2875rpm.

Low-Cost Laboratory Pump

13-874-95

Compact, high-suction, plastic self-priming pump fills and empties drums and carboys for general transfer work in lab processing. Capac, 23 liters/min. When first started, lifts solutions 304 to 610cm. In operation, lifts water 7.6m.

Ordering Information: Body made of tough, corrosion-resistant phenolic-type plastic that withstands temperatures from 7.2° to 82°C. Stainless-steel parts and neoprene impeller. 115VAC

13-874-9583.50
(Jabsco 12290-0001)

For perfect mixing in cuvetts

Unique magnetic centrifugal stirrer fits into standard 10mm light path spectral cells. Provides rapid vertical and horizontal mixing with minimum vortex when placed on magnetic stirring machine. Centrifugal pumping action generated by cross channels in upper face mixes without aeration. Photometric measurements can proceed uninterrupted while reagents are added. Will not scratch cuvetts. No crevices to trap dirt.

Case of 50 190 00

Metering Pumps

Chemical-resistant, polypropylene bellows

Polypropylene bellows that generate no friction — plus absence of seals — make these pumps ideal for corrosive fluids, many abrasive liquids and slurries. Self-priming. As vacuum pumps, pull up to 1/2 atmosphere (38cm Hg).

Pumping rate controlled by adjusting screw which varies crank throw. Infinitely adjustable from full capacity down to 10% of max flow. Convenient switch stops pump while adjustments are made.

Ordering Information: Powered by fan-cooled motor. Stainless-steel base and cover. Snap-on polypropylene shield protects crank mechanism. 115V 50/60Hz. Two models available.

Dial-A-Flow Pump

In addition to adjusting screw, speed of motor can be adjusted from 12 to 60 rpm while pump is operating. Capacity 12 to 630ml/min. Bellows dia, 38mm. 0.7kg/cm² max discharge pressure.

13-874-30 166.00

Standard Dual Pump

Has 2 independently adjustable pumps and one motor. Single motor moves each pump 180° out of phase with other. Permits accurate proportioning in low pressure range at ratios as high as 110/1. The pump with 25mm

dia bellows gives 16.5 to 165ml/min flow; other pump (64mm bellows) provides 181 to 1810ml/min flow. 25x64mm bellows. 33rpm output shaft. Max discharge pressure, 0.35kg/cm².

13-874-33 181.00

13-874-33

Peristaltic Pump

Delivers 3 to 6500ml of gas or liquid/min

Varistaltic® pump utilizes squeezing action of rollers on flexible tube to create flow. Fluids never contact any part of pump — only inert tubing. No contamination or cleaning problems.

Set speed remains stable within ±1% over entire range, even when flow is reversed. Pump is self-compensating to assure constant speed despite load changes due to pressure variations. High torque, solid-state 4-transistor speed control.

Ordering Information: Accommodates tubing from 3.2mm ID through 9.5 ID x 1.6mm wall. 24Lx32Wx19cmH. 115V 60Hz.

13-875-105 595.00

13-875-105

Manostat Peristaltic Pumps

Handle gas or liquid at rates from spaced droplets to 4500ml/min

13-875-110

Advanced Varistaltic® Pump

Provides uniform flow rate, reproducible results, reversible flow. Delivers 15 to 4500ml/min with $\pm 3\%$ reproducibility. Ideal for contamination-free pumping of acids, bases, toxic and sterile liquids, and gases.

Pumping action consists of two rollers squeezing flexible tube against wall of horseshoe-shaped housing, thereby producing peristaltic effect. Delivery volume adjustable, linearly proportional to speed, directly influenced by dimensions of tubing.

Gearless direct drive permanent magnet motor with uniformly variable speed control by solid-state circuitry. Fingertip control for flow reversal.

Ordering Information: Uses 3.2 to 9.5mm ID tubing with 1.6mm thick walls. Lightweight two-tone metal cabinet. 24Lx32Wx19cmH. 115V 60Hz.

13-875-110440.00
(Manostat 72-320-000)

13-875-115

Portable Varistaltic® Pump

Moves from 100 to 2500ml of liquid or gas per minute through flexible, chemically-inert tubing without contamination. Delivery volume adjustable, linearly proportional to speed, and directly influenced by dimensions and elasticity of tubing.

Ordering Information: With one control knob, variable rheostat control. Accommodates tubing from 3.2 through 7.9mm ID with 1.6mm thick walls. Requires 15Lx20cmW of bench space. Net wt 3.6kg. 115V 60Hz.

13-875-109230.00
(Manostat 72-300-000)

Varistaltic® Dispenser Pump

Dispenses a few drops or large volumes with $\pm 3\%$ accuracy. Fills test tubes, dishes, flasks at high speeds without fear of contamination. Dispenses 1.5 to 250ml per dispensing cycle from 0 to 6 sec. Fluid never comes in contact with any part of the dispenser.

Ordering Information: Complete with peristaltic pumping head, timer, dispensing unit. Controls located on front panel for convenience. For 3.2 to 7.9mm ID tubing with 1.6mm thick walls. 115V 60Hz.

13-875-115490.00

13-875-117

Manual Dispenser

Allows you to dispense large volumes or small amount. Consists of dispensing arm with remote actuating switch and junction box.

Thread tubing from pump through tube guide on dispenser. Plug dispenser and pump into junction box. Flip switch to start pump; release switch when required amount is dispensed.

Ordering Information: With arm, stand, plastic and glass tip, junction box (required if timer on 13-875-115 pump or 13-875-111 timer is not used).

13-875-112 110.00
(Manostat 72-645-000)

13-875-112

Multichannel Peristaltic Cassette™ Pump

Multichannel Peristaltic Cassette Pump provides pumping action from 1/4 to 500ml/hr per channel for up to 20 different channels.

Depending upon specific application, up to 10 cassettes can be added or removed in seconds. Each cassette can accommodate 2 tubings from less than .79mm ID or single tube up to 4.8mm ID. Insert cassette in drive module one way for high speed; reverse cassette 180° in module for low speeds.

Ordering Information: Consists of control/drive module, pump module, pumping channels in form of individual cassettes.

Attractive, lightweight, two-tone metal cabinet with acrylic plastic safety shield. Single speed control

13-874-600

knob and forward/reverse switch. No pulleys or exposed moving parts. Operates in vertical or horizontal position. Without cassettes. 33Lx17Wx18cmH. Net wt 5.4kg. 115V 60Hz.

13-874-600 485.00
(Manostat 72-500-000)

Junior Cassette Pump

Flow rates from
1.5 to 90ml/hr

Junior Cassette Pump operates with 4 channels simultaneously. One or 2 individual cassettes (each accommodating 2 tubings up to 2.4mm ID or a single tubing up to 4.8mm) provide 4 pumping channels.

Compact drive unit operates cassettes on common drive shaft. Just drop cassette in place and lock-gear wheel within cassette engages unit's drive shaft.

Ideal for contamination-free pumping of acids, bases, toxic and sterile liquids, and gases.

13-874-610

Ordering Information: Two-tone metal cabinet. Single knob for variable speed control. Drive unit without tubing or cassettes. 18Lx18Wx18cmH. Weighs only 2.3kg. 115V 60Hz.

13-874-610 235.00
(Manostat 72-510-000)

13-875-120

Polystaltic® Pump

Delivers solutions to and from chromatographic columns and automatic analyzers

A four-channel peristaltic pump. Handles corrosive liquids, sterile solutions, biologically infectious materials with flow rates of 2.5 to 1000ml/hr/tube.

Each of the 4 channels contains 10 stainless-steel precision bearings attached to rotor. Five bearings press upon the tubing at all times to move the liquid along smoothly without pulsation. Machined-brass pressure plate adjusts pressure on tubing of all 4 channels. Wave-like pumping action independent of gravity and does not have backflow occurrences.

Ordering Information: Uses 0.8 to 2.4mm ID tubing with 0.8mm wall thickness. Variable speed control. 110V 50/60Hz.

13-875-120523.00
(Buchler 2-6100)

13-875-130

Multi-Staltic Peristaltic Pumps

3.0 to 3500ml/hr

Multi-Staltic Peristaltic Pump with 4 channels. Each channel accommodates Tygon® tubing 0.8mm ID to 4.8mm IDx0.8mm wall and No. 11 gauge standard wall Teflon® tubing. Use of chemically inert tubing makes pumps ideally suited for handling corrosive liquids, sterile solutions, biologically infectious materials. No danger of contamination — no time-consuming clean-up problems.

Tubing can be inserted as a closed loop without interruption while attached to sterile

system. Smooth, pulsation-free operation. Solutions move in wave-like manner at continuous rate — adjustable with variable speed control. Flow is reversible.

Ordering Information: With plastic disc with 10 stainless-steel bearings (to control liquid flow), 4.8mm wide plastic pressure strip, electronic variable speed control. 115V 50/60Hz.
13-875-130525.00
 (Buchler 2-6200)

Sage 4-Channel Peristaltic Pumps

Minimal pulsing, uniform flow rates

Designed to overcome such difficulties usually associated with peristaltic pumps as highly pulsatile flow, changes in flow rate, and poor tubing life.

Interchangeable pressure plates fit under top plate of pump. Each plate is designed (and color-coded) to hold different tubing sizes: 2kg plate holds 1 and 1.5mm ID tubing; 5kg plate holds 2½ and 4mm ID tubing.

Plates are self-adjusting to hold each tube size snugly . . . minimizes pulsing, eliminates tube creepage, assures stable flow rates.

Planetary gear mechanism minimizes tubing stretch and wear for long tubing life.

Four independent pump channels accept different sizes and types of tubing simultaneously (up to 4mm ID or 8mm OD). Available in variable and constant speed models. For 115V 50/60Hz.

Variable Speed Model with Tachometer

Servo speed control lets you select exact motor speed desired. Tachometer electronically stabilizes motor speeds regardless of fluid viscosities, line voltage, high back pressures, or slow speeds. Reproducible flow rates from 1.2 to 1000ml/hr per channel.

Ordering Information: Includes two 2kg and two 5kg pressure plates, two 1.0mm ID and two 4mm ID lengths of tubing, 8 straight glass connectors to interconnect other tubing to supplied tubing.

14-831-38595.00
 (Orion M375A)

14-831-38

Constant Speed Model

Each channel gives flow rates from 40ml/hr (with 0.5mm ID tubing) to 1000ml/hr (with 4.0mm ID tubing).

Ordering Information: With two 2kg and two 5kg pressure plates, two 1.0mm ID and two 4mm ID lengths of tubing, 8 straight glass connectors to interconnect other tubing to supplied tubing.

14-831-35550.00
 (Orion M371A)

Sage Syringe Pumps

Infuse and withdraw from
0.07µl/day to 140ml/min

Sage Syringe Pumps provide uniform flow fluids for feeding samples of varying viscosities to atomic absorption spectrophotometers, flame photometers, column chromatographs, and other analytical instruments.

Each pump is powered by pulser motor which drives set of gears on top of pump housing. Both gears engage mating racks inside Plexiglas drive carriage and move

syringe piston smoothly down its barrel. At fastest flow rate, motor drives piston at 225 pulses per sec. At end of run, motor stalls itself to prevent syringe damage. All pumps are housed in scratch-resistant vinyl-coated case without top openings. Syringe holders secure any ground glass or plastic syringe from microliter to 50 or 100ml. Front panel contains all controls plus flow rate chart.

Single-Channel Pump

With over 132 flow rates

Sage Model 341 Syringe Pump offers 11 flow rates for any syringe size from microliter to 50ml, in ml/min and ml/hr flow ranges. Total of 132 rates from .0092µl to 13 ml/min are obtained by setting range switch and rate selector switch to position given on front panel flow chart. Additional flow rates can be achieved by using other size syringes. Place filled syringe in holder. Set drive carriage on gears with driving surface touching syringe piston. Set rate selector dial from 1 to 11. Move power switch to ml/min or ml/hr. Flow rates highly reproducible; 1% for ml/min range and 2% for ml/hr range. Pump stalls itself when syringe is empty.

Ordering Information: Housed in scratch-resistant vinyl-coated case. 13Lx31W x11cmH. Net wt, 2.3kg. 115V 50/60Hz.
14-831-40375.00
(Orion M341)

14-831-40

Triple-Channel Pump

For infusion only

Sage Model 355 Pump is designed to infuse fluids at variable flow rates over range of two billion to one. By using syringes from 0.5µl to 100ml, any flow rate from 0.07µl/day to 140ml/min can be achieved with ±0.5% reproducibility. Place filled syringe up to 100ml in holder. For multi-channel pumping, use 2 syringes up to 50ml, or any 3 syringes up to 30ml. Set percentage flow ten-turn dial to give digital readout in percentage of max flow. Switch range selector to reduce flow rate by factor of 10, 100, or 1000.

Ordering Information: Housed in scratch-resistant vinyl-coated case with flow rate chart. 13Lx32Wx17cmH. Net wt, 3.6kg. 115V 50/60Hz.
14-831-45595.00
(Orion M355)

14-831-45

Triple-Channel Pump

For withdrawing and infusing

Sage Model 351 provides rates from 0.15ml/min to 60ml/min. Calibrated with 19 most often used flow rates which can be achieved with any 6 standard size syringes, from 5 to 100ml. Smaller syringes down to microliter size can also be used.

Insert filled syringe. Turn switch to the size of the syringe being used. Set center switch to desired flow rate. Turn mode switch to "infuse" or "withdraw". Pump mechanism automatically sets carriage speed to deliver flow rate.

Ordering Information: Housed in scratch-resistant vinyl-coated case. 13Lx32W x17cmH. Net wt, 3.6kg. 115V 50/60Hz.

14-831-48495.00
(Orion M351)

With flow rate from 0.15 to 60ml/hr. Sage Model 352 is similar to 14-831-48 but has flow rate calibrated in ml/hr instead of ml/min.

14-831-50495.00
(Orion M352)

14-831-48

14-831-52

Single-Channel Pump

Delivers uniform flow on unlimited volume basis

Sage Model 220 Syringe Pump draws liquid from reservoirs to provide constant flow from 0.0068ml/min to 29ml/min with $\pm 0.05\%$. Consists of 2 matched motors, 2 flow rate controllers with 10 turn dials, 2 drive carriages which hold 2 syringes from 1 to 100ml.

One syringe draws fluid from the reservoir while other empties. Filling cycle at constant rate and faster than infusion rate, allowing the reserve syringe to be always filled and ready to go before delivery syringe is empty.

Ordering Information: Housed in scratch-resistant vinyl-coated case. 18Lx19W x46cmH. Shipping wt, 11kg (25 lb); net wt, 7.7kg. With T-connectors and Silastic tubing. Without syringes. 115V 50/60Hz.

14-831-521095.00
(Orion M220)

Recommended for use with Sage Pumps are B-D Multifit® syringes. See 14-823-10, 14-823-15, 14-823-20 on p 1151.

Radiometer
Measures Total Surface
Radiant Energy

Measures energy from sun, UV lamps, helium-neon continuous wave lasers, etc, regardless of wavelength. Accurate to $\pm 5\%$ full scale. Delivers 99% of reading within 30 seconds. Direct-reading in Joules/m²/second, with reverse dial plate for watts/m². Includes temperature compensation capabilities from 18° to 40.5°C and a 120 Joules/m²/second balance offset for suppressing ambient radiation levels. Coarse and fine balance controls, and output signal for recorder with minimum 10K-ohms impedance.

Unit includes radiometer with DC amplifier, range selector, and meter readout. Sensing probe (13-938-102; not included) has fused-glass window and meets wavelength-independence requirements over unit's 300 to 2700nm range. Sensor is 12Lx9Wx38mmH. Fits sample chamber of most spectrophotometers and colorimeters. Choice of seven full-scale sensitivity ranges. Starting with 0 to 2.50 Joules/m²/second ending at 0 to 2500 Joules/m²/second.

In operation, instrument's sensing probe, which contains dual-thermistor bolometer, acts as two legs of Wheatstone bridge circuit. One thermistor attached to a silver "target" receives radiant energy. Second thermistor, shielded from radiation, is exposed to ambient temperature as reference. Thermistors provide output voltage directly proportional to amount of radiant energy. This signal is scaled, amplified, and presented on easy-to-read meter.

Ordering Information: Instrument is easy to maintain in the field through use of interchangeable, precision thermistors and factory-calibrated individual probes. Protected by rugged aluminum case. 14Lx24Wx17cmH. Weighs 2.5kg. 115V 60Hz. Without probe. See listing below.

13-938-100 545.00
(YSI 65A)

Sensitive probe. Accessory for 13-938-100. 99% of results in 30 seconds. Use easily in commonly inaccessible areas.

Solid-State Recordall® Recorders . . . Five Big Advantages! 1/2 to 1/3 the Cost!

New Chart Paper Tear Bar

Purchase price of these Recordall Recorders is just 1/2 to 1/3 that of competitive units, yet you still get $\pm 0.3\%$ full scale accuracy, $\pm 0.1\%$ repeatability, 1/2-second full-scale deflection. Outstanding features of all Recordall Recorders:

Sprocketless paper drive is self-aligning

Feeds paper positively for accurate recording. Lets you use low-cost, 11"x100' (279mmx30m) paper rolls without sprocket holes. Or, standard European rolls measuring 297mmx30m, without recorder modification. Rolls with perforations every 22cm also available.

Paper roll mounts conveniently on back of recorder

Easy to see if paper is running out . . . easy to change. Simply insert into instrument and under web-type feeder. Rolls may be re-rolled for overplots or storage . . . plenty of space for notation.

Patented transducer acts as no-contact, re-balance potentiometer

Gives infinite resolution, reliable performance. Eliminates cleaning and trace "glitches" forever.

Multi-speed chart drive

Rotary control of 6 speeds (17 optional) with no gears or clutches to change. Change to English or metric units in seconds. No more messy inking problems. Disposable, nylon or dacron-tipped pens simplify cleaning. Four colors: red, green, black, and blue. Mechanical pen lift provides hands-off pen control (optional electric lift).

Full-scale zero controls let you position "zero"

Anywhere on 10" (250mm) trace range (applies to single and dual-pen instruments). Chart adjusts from left-to-right reading or vice versa.

Recordall instruments are simple, versatile, and virtually maintenance-free. Perform well in lab or field tests. Operate on 110 or 230V. Remain unaffected by line frequency, power fluctuations, or changes in temperature/humidity. Need no lubricating. All parts are easily accessible. Amplifier pivots for access to both sides without disconnecting. All solid-state. Delivers low-drift recording from highly reliable IC's and FET's. Contains no mechanical or light diode choppers . . . no tubes or nuvistors. No gain adjustment required.

Recordall line available with convenient options. Includes: chart speed divider; electric pen lift; electrical integrator; 1mV span full scale and an event marker.

Ordering information on next page.

Vari-Span Input Adapter. Ten-turn attenuator which expands signals (those too small or too large for standard Recordall input ranges) to full-scale or other on-scale pen positioning.

Hook-up to Recordall is simple. Connect leads from signal source to identified terminals on Vari-Span. Then connect leads on Vari-Span to barrier terminal strip on base of Recordall.

13-939-6642.00

Accu-Span Variable Input Adapter. Similar to 13-939-66 Vari-Span adapter, but with calibrated dial which permits accurate setting of input range and at the same time allows extra re-setting to any previously selected attenuation level.

13-939-6860.00

Pens. Snap-on disposable unit includes pen tip and ink. Fits both one and two pen recorders. 13-939-59 is type supplied with all recorders. Two red, two black.

13-939-59.....Pk of 4/5.00

Continuous Chart Paper For Recordall Recorders

Inch scale. Time axis has major division every 1 inch with 6 subdivisions per inch. Amplitude axis has 10.6" (27cm) grid with 10 major divisions and 106 minor divisions. Roll is 11"W, 100' total length.

13-939-45.....Box of 4/17.60

Centimeter scale. Time axis has major division every 1cm with 6 subdivisions per cm. Amplitude axis has 27cm grid width with 10 major divisions and 270 minor divisions. Roll is 28cmW, 30m total length.

Coleman Strip Chart Recorder

Fast, accurate recording to match high-performance gas chromatographs, pH meters, spectrophotometers, and similar analytical instruments. High balancing speed yields 0.5-second pen response full scale. Sensitivity is 0.1% of full scale. Accuracy, $\pm 0.3\%$ on all ranges.

Input ranges are calibrated. Include 1, 2, 5, 10, 20, and 50mV plus 0.1, 0.2, 0.5, 1, and 10V. Chart speeds include 5, 10, 20, 60, 120, and 240mm/min. "Zero" adjustment is full scale. Solid-state integrated circuitry, FET chopper and precision zener diode reference ensure stability, reliability. Plug-in PC boards simplify service, minimize down time.

Convenience features include self-feeding chart paper system and external "Zero", "Gain", and "Span" controls. "Zero check" switch lets you check instrument zero. Chart drive and pen servo-mechanism can be controlled remotely, using external timer (not included).

Ordering Information: Recorder measures 44Lx43Wx14cmH. Weight, 11kg. 115V 60Hz.

13-940-990

YSI Single Channel Recorder

Ideal for use with temperature and dissolved oxygen analyzers, humidity indicators, etc. Monitors medium to slowly changing variables best.

Handles grounded or floating input. Voltage ranges to 10 and 100mV, 1, 10, and 100V. Current ranges to 1, 10, and 100 μ A, 1 and 10mA. Accuracy is $\pm 2\%$ full scale for voltage. $\pm 3\%$ full scale for current. With 1-second, full-scale stylus deflection.

Expand input signal up to 10 times. Or, shift "zero" point anywhere on scale (off scale up to four times full chart deflection) with special offset and span control features.

Instrument is highly stable. Only $\pm 1\%$ per day, given fluctuations of $\pm 10\%$ in line voltage and $\pm 5^\circ\text{C}$ ambient temperature. Chart speed

as supplied is 1"/hr (2.5cm/hr). Gears available for 2, 3, 6, 10, 12, 15, and 30"/hr (5.1, 7.6, 15, 25, 31, 38, and 76cm/hr).

In operation, range, span, and offset controls condition input signal. Then signal is filtered to reduce AC noise, amplified and recorded. Stylus strikes pressure-sensitive chart paper every 2 seconds making an impression in over-lapping segments.

Chart paper is collected on take-up roll or directed out of recorder. Window permits note-taking while recording.

Ordering Information: Recorder operates on 115V 60Hz. Weight, 5kg. 15Lx25Wx20cmH with one roll of chart paper and instruction manual.

13-940-700570.00
 (YSI 80A)

13-940-700

Dual Channel YSI Recorder

Similar to 13-940-700, except that a second channel is incorporated so that two variables may be recorded simultaneously. Recorder motor is run at double speed — a mark is made every second instead of every two seconds

Ordering Information: Supplied with 3-prong polarized plug, adapter, chart paper, and instructions. For operation on 115VAC, 60Hz.
13-940-710315.00

Chart Paper. Replacement rolls for YSI recorders. Pressure-sensitive, 7.6cmW. Actual chart is 19mLx6cmW. 4 divisions/inch (4/25mm) along length. 50 divisions across width.

13-940-710

Hand-Size Galvanometric Recorders for Field Use

FISHERbrand® mini strip chart recorders ideal for environmental measurements. Such as engine and exhaust temperature and pressure, dissolved oxygen and temperature in wastewater, smoke monitoring, pH recordings, physiological monitoring. And portable or field recording in agriculture, oceanography, meteorology, food processing, and life science.

Four models available for DC voltages in microampere, milliamperere, millivolt, or volt ranges. Plus a temperature recorder model especially for use with Fisher CO₂ Incubators (p 512). Each recorder is just 10.4Lx8.8Wx14cmH and weighs just 1.5kg.

Fast and convenient — under 10-second response. Chart speed of 1"/hr (25mm/hr). Measure and record electrical signals without amplification. Pressure-sensitive rectilinear chart paper means no ink, no heat required for markings. Records are smudge-proof.

Chart spools are 63' (19.2m) long, permit continuous recording for one full month at 1"/hr (25mm/hr) speed. Usable scale width 2⁵/₁₆" (5.8cm). Each recorder

provides both chart tear-off and chart re-roll modes. Note: you can easily review chart and re-roll while recorder is operating. Sliding access window lets you make notations right on chart with pen or pencil.

Each recorder comes in die-cast aluminum case with suede-like epoxy finish, complete with brackets for panel mounting and rubber feet for table use.

DC Voltage Recorders

13-939-224

Accessories

Chart Paper. For 13-939-220 through 13-939-226 recorders. This pressure-sensitive paper requires no heat or ink to produce markings. Has black paper base coated with thin, light-reflecting white layer.

Each foot of chart paper is numbered 1 through 12 to aid time setting. Each inch is graphically divided into 4 segments. "End of Roll" warnings printed 3' from end

of roll and repeated each foot to end.

L, 63' (19.2m). Usable scale width, 2⁵/₁₆" (5.8cm). 50 divisions across width.

13-939-232Pk of 6 rolls/19.50

Thermistor Probe. For use with 13-939-228 recorder when monitoring skin and flat surface temperatures. Stainless-steel flexible lead disc with plastic backing, 9.5 dia x 3.2mm thick. Attached to 30m cable.

13-939-23039.75

Fisher Signal Conditioner Filters, Attenuates, Suppresses mV Signals

Model 121 Signal Conditioner expands range of mV recorders as well as improves reading accuracy and sensitivity. Just connect Conditioner between any lab instrument and recorder with 1 mV output and impedance of 100 ohms or less. Such as, temperature sensors, electrodes, thermocouples, thermistors, etc.

Three modes of operation. Used separately or together. **Filter** mode enhances display and interpretation of signals from highly sensitive output sources. **Suppression** mode provides bucking voltages to keep output data on scale without sensitivity loss. **Attenuation** mode uses voltage divider network of resistor to reduce magnitude of signal by factor large enough to keep output data on scale.

Choice of five filter ranges: 0 to 4 that relate respectively to time constants 0.00, 0.05, 0.50, 1.00, and 2.50sec. Six attenuation ranges: x1, x5, x10, x20, x40, x50 plus SHORT position that allows operator to electrically isolate recorder when adjusting pen to zero. Ten suppression positions — each progressively shifts recorder pen full scale of attenuation factor.

Two-tone black and citron grey portable unit. Reliable solid-state electronics, automatic line voltage, and ambient temperature compensation. 20Lx30Wx15cmH.

For 120V
11-134-146195.00

For 240V

Specifications

Attenuation Accuracy	< ±0.2%
Attenuation Temperature Stability	±0.06% of setting
Suppression Accuracy	< ±0.2% per mV step
Suppression Stability	
Temperature (15° to 40°C)	±3μV
Line Voltage (±10% change)	±5μV
Output Linearity	±0.1%
Output Accuracy (with source impedance 100 ohms or less)	±0.5% of FS

11-134-146

Linear Auto-Expander . . . keeps peaks on recorder paper

Attach Model 410 Linear Auto-Expander to any recorder. 1V (1000mV) peak stays on chart without reducing recorder sensitivity. Gives resolution of 0.1mV. By using built-in manual suppression, resolution of 1 part in 100,000 per chart division or readability of 1 part per million of signal can be attained.

Auto-Expander is an automatic zero suppressor that you can match to 100mV recorder. When pen reaches top of chart scale, it streaks back to zero in 50 microseconds, then starts climbing again. Repeats process when it "sees" zero line and input is still dropping. It will shift 10 times, both ways. Indicator lights show which step you are recording.

You also have 1 volt of manual zero suppression and 4-step input range selector (1, 10, 100, and 500mV full scale). Mercury reference cell and ultra-stable electronics prevent calibration from drifting more than 10 μ V in 96 hours.

Auto-Expander can be used with any instrument that has analog output — gas chromatographs, atomic absorption spectrophotometers, thermal analyzers, enzyme analyzers, fluorometers, mass spectrometers, and nuclear magnetic resonance instruments.

Unit is 24Lx11Wx9cmH. 115V 50/60Hz, 12w.

13-939-99350.00

13-939-99

Recorder Checker Verifies Linearity

Fisher Model 122 Recorder Checker is a compact, battery-powered millivolt source for verifying linearity and full-scale accuracy of any 1, 5, or 10mV recorder with impedance of 100K ohms or greater.

Range: 1, 5, 10mV in steps. Accuracy, $<\pm 0.25\%$ fs. Temperature stability, $<\pm 2\mu$ V per $^{\circ}$ C over 15 $^{\circ}$ to 40 $^{\circ}$ C range. Linearity, $\pm 0.1\%$ fs.

Two-tone black and citron grey unit. 10Lx15Wx3.7cmH. With integrally attached cable, alligator clips, and 9.45V battery.

13-939-215104.00

Replacement Mercury Battery. 9.45V. Average life under normal use, 2 yr.

13-939-2169.50

(Kimble 39000) Case of 4/48.08

13-941

Water Flow Indicator

Insert in water lines for an instant check of flow continuity and relative flow rate. Clear plastic. A red ball spins through circular course at speed that increases with velocity of water flow. Tapered inlet and outlet fit rubber tubing 6.4 to 9.5mmID. Over-all length 57mm.

11-164-40Bag of 2/7.00

Refractometers

Bausch and Lomb Refractometer

For indices of refraction of liquids and solids between 1.30 and 1.71. Determines percent dissolved solids (based on International Sucrose Tables) to $\pm 0.2\%$ over 0 to 85% range. (Estimate results to $\pm 0.1\%$).

The Abbe 3-L is easier to clean and service. A new lamp arm is corrosion-resistant with all wiring mounted within the arm. The conveniently located operating controls include a single 3-position switch for controlling the light source and scale lamp. A step down transformer (6 VAC output) is an integral part of the line cord, eliminating high voltage in the instrument itself. It's sealed against solution drippings and spills so common in refractometry.

To test, simply place sample in front-mounted horizontal prism.

Flip lamp switch for illumination. And read results on precision index scale. Scale is subdivided into 0.0005 units. Vernier micrometer ensures sharp line settings. Line and scale both visible in one eyepiece.

Constant sample temperature is maintained by bath flow system in both prism boxes. Read transparent and semi-opaque samples by adjusting occluder.

Ordering Information: Eyepiece is tilted for viewing comfort. Line-setting knob has two speeds for slow or fast adjustment. With 1 set of prisms, 1 glass test piece, 1 thermometer graduated from 0° to 100°C in 1° increments, one 7-ml bottle of 1-bromonaphthalene, 1 calibration wrench, plastic dust

cover, dispersion tables, and instructions. 115V 50/60Hz.

13-9631595.00

Thermometer Assembly. For Refractometer 13-963. Include instrument model no. when ordering.

13-963-637.80

Accessory Eyepiece. For Refractometer 13-963. 1.3-power.

13-963-1050.00

Spare Prism Set. For Refractometer 13-963. Available at list price when ordered with refractometer. Otherwise, subject to special quotation, and delivery is not guaranteed. When ordering separately, include refractometer part number and number engraved at end of glass reading scale.

13-963-4450.00

13-963

Abbe Refractometer

For liquids, solids, solids-in-liquid or powders over 1.300 to 1.700 and 0 to 95% range. Accurate to ± 0.0001 refractive unit and $\pm 0.2\%$ solids-in-liquid.

Scale reading easy and precise with well-defined light-field/dark-field dividing line, and internal illumination. Scale subdivided into 0.0005 refractive units and 0.5% solid-in-liquid units. Built-in Amici prisms compensate for white-light dispersion.

Media circulating system permits close sample temperature control. Attach an external bath. Water flows around measuring and illuminating prisms. Shielded thermometer measures 0° to 100°C.

Instrument is durable, easily used. Front-mounted sample prisms unobstructed, easy to load. Control switches conveniently grouped. Refractometer is adjustable to eye-level.

Ordering Information: With gray stainless-steel housing. With 1 glass test piece, reflection prism, 1-bromonaphthalene (7ml), two 6-V, 0.2amp lamps, 0°-100°C thermometer, dust cover and instructions. 115V 60Hz.

13-9641345.00

Replacement thermometer.

For Refractometer 13-964. 0°-100°C.

13-964-19.00

13-964

Zeiss Abbe Refractometer

Measures over 1.3 to 1.71 and 0 to 95% (Brix scale) range. Ideal for purity checks on mineral oils and their products. Proportions of components (with different refractive indices) in binary mixtures. Sugar in aqueous solutions. Fat content of solutions, etc.

Measurement accuracy to 0.001 refractive unit or 0.5% sugar unit is possible. Interpolation for greater

accuracy easily done. Chart supplied for determining mean dispersion.

To test, place sample drops on measuring prism. Move illuminating prism into position. Open light aperture and turn instrument toward light source. Adjust eyepiece and compensator knobs. Read index.

Temperature controlled closely by circulating bath medium

through prism holders. Range, approximately 0° to 50°C.

Ordering Information: With prisms (in housing), 0°-50°C thermometer, 1 bottle monobromonaphthalene, mean dispersion chart, key for changing prism and wooden case. Weight, approx. 5.8kg.

13-965-1002340.00

13-965-100

Low-Price Fisher Refractometer

Determines relative optical dispersion, sugar concentration, total solids in preserves, identifies organic compounds, etc, over 1.30 to 1.90 N-range, or 0 to 80% sucrose range. Accuracy is ± 0.002 units and $\pm 1\%$ respectively. Sample size required is only 0.001ml. Unique illuminated scale also, for maximum visibility.

In operation, lamp casts light beam through 2-mm aperture to the eye. Fixed glass plate with plane, parallel faces and attached glass prism rests over aperture, forming small sample well. Light beam passing through sample well provides clear illuminated image of scale plus virtual image (due to refraction through sample prism). Solutions with refractive index less than glass produce virtual image above slit in scale. Refractive indices greater than glass produce virtual images below slit.

Ordering Information: Instrument operates on 115VAC or DC. With light source and 1 glass prism.

13-947.....197.00

13-947

Refractometer with Heater Head

Also measures melting points

Measures melting points plus refractive indices, optical dispersion and sugar concentration for solids which become liquids between ambient and 200°C.

Index range is 1.30 to 1.90, with accuracy to ± 0.002 units. Sucrose range is 0 to 80%, with accuracy to $\pm 1\%$.

Place sample in prism. Heat carefully to melting point. Then measure refractive index, optical dispersion, sugar, etc.

Ordering Information: Electric heater, rheostatically controlled. Eyeshield protects operator's eyes. Thermometer well for 20° to 300°C thermometer. With thermometer (20° to 300°C), silver wool for mounting thermometer, 1 prism, and heavy-duty transformer. 115V 50/60Hz.

13-947-5.....420.00

Glass Prisms. Replacements. For refractometers 13-947 and 13-947-5.

12-142T.....11.50

13-947-5

Hand-Held Refractometers

For field and in-plant determinations

Orange illuminating filter increases dividing line contrast. Thermometer, calibrated in percent dissolved solid correction units, allows compensation for temperature variations. Scale may be read with accuracy of $\pm 0.1\%$ sucrose.

Determinations can be performed with transmitted, as well as, reflected light. Simply load sample directly onto prism and take reading in percent sucrose from scale.

Low range reads from 0-60%; high range from 40-85% sucrose.

Ordering Information

Refractometer, low range. Readings from 0-60% solids, with correction thermometer, in carrying case.

13-965-120395.00

Refractometer, high range. Reading from 40-85% solids, with glass test piece, bottle of bromonaphthalene, correction thermometer, in carrying case.

13-965-125395.00

13-965-120

Refractive Index Liquids

Set of Cargille certified refractive index liquids. Range: 1.400 to 1.700 in intervals of 0.004. Includes 76 liquids, 4 inorganic solids of known refractive index, thermometer, and 2 glass applicator rods. Use with microscopes to determine refractive index.

13-946-5135.00

13-946-5

New Metric Conversion Computer

A full function calculator complete with memory. Instant, accurate answers for 126 types of metric conversions. Simply enter metric or U.S. units, press convert key, read exact answer with decimal point in place. Converts length, area, weight, volume, liquid measure, temperature.

As a calculator, it adds, subtracts, multiplies, divides. Has fully addressable memory and memory recall. Also: over-

flow indicator, % key, negative indicator, chain calculation capability, floating decimal, 8-digit logic, and bright LED display.

Ordering Information: With nickel-cadmium battery, 115V adapter and re-charger, carrying case, and instructions. Wt. 0.16kg (5.5 oz). Size: 10x8cm.

Refrigerators for Every Lab

13-988-100

13-988-150

Safety Refrigerator for Volatile Chemicals and Reagents

Safety refrigerator has working chamber free of exposed electrical contacts. Working chamber temperatures from 37° to 45°F (2.8° to 7.2°C) with freezer compartment at 15° to 25°F (–9.4° to –3.9°C) respectively.

Exterior and interior, steel with white enamel finish. Fiber glass and styrofoam insulation. 3 zinc-plated steel wire shelves adjustable in 13mm increments. Stainless-steel drip pan protects refrigerator contents from moisture. Sealed compressor and motor with polarized connection that removes static electricity. Capac, 0.31m³. Shelf space, 0.7m²

Exterior: 76Lx71Wx165cmH. Interior: 52Dx 60Wx83cmH. 115V 50 60Hz. Shp wt, 108kg (260 lb)

13-988-100595.00
(Precision 31208)

Revco Explosion-Proof Refrigerators

Choose from these three beautifully constructed upright +5°C/+40°F explosion-proof refrigerators. Models for small (269-liter), medium (439-liter), and large (547-liter) volumes. Each listed by Underwriters Laboratories for hazardous locations, NEC Class 1, Groups C and D. Each fully meeting OSHA requirements for safe storage of highly volatile materials. Ideal for ether storage. No interior wiring. No interior switching components. No metal-to-metal contact anywhere in the chamber. Thermostats, re-

lays, and switches are totally enclosed — as are the compressors.

Two larger models feature built-in lock with exclusive Eject-A-Key. (Key cannot be left in lock accidentally — you're protected against unauthorized use.)

Models are chemical- and stain-resistant, inside and out. Cabinet is heavy-gauge cold-rolled steel, finished in baked-on acrylic enamel. Interior is single-piece molded shell of rugged ABS plastic. Doors open 90° for ready access to contents.

Contempra™ Undercounter Refrigerators

Choice of left or right side door mounting

0.13m³ Models

Compact units you can group with other Contempra™ furniture arrangements. (See p 390.)

Doors don't interfere with neighboring base units. Can be mounted to open from left or right. Doors have full perimeter magnetic gasket for firm, effective seal. Fingertip grip eliminates protruding handle.

Exterior, steel with white enamel finish. Interior, one-piece corrosion-proof polystyrene with no recesses to trap spilled materials. Each unit has one removable shelf, adjustable to 3 positions, plus additional door storage and tray.

Sealed 1/12hp compressor mounted in base with intake-exhaust through front grill. Compressor warranted for 5 years. Temperature range: 17.6° to 40°F (−8° to 4.4°C). Achieves operating temperature within 30 minutes.

97-920 is 20Lx23Wx34.5"H (51x58x88cm) and 97-950 is 22"L (56cm).

Both models without freezer compartment. 97-950 is explosion-proof for safe storage of flammable solvents according to National Board of Fire Underwriters. Both models self-defrosting. 115V 50/60Hz. UL approved. Shp wt, 120 lb (54kg).

Description	Cat. No.	Ea
Standard model	97-920	419.00
Explosion-proof	97-950	705.00

0.19m³ Model with Freezer

Same as 97-920 except with freezer compartment and thin-wall polyurethane insulation. Provides approx 50% greater capacity. For 17.6° to 40°F (−8° to 4.4°C) range. Full-width freezer, one adjustable shelf, and tray. Does not self-defrost. Exterior: 21¹³/₁₆Lx23⁷/₈Wx34¹/₂"H (55x61x88cm). 115V 50/60Hz. Shp wt, 120 lb (54kg).

97-950

13-987-9

Self-Defrosting Refrigerator

Two-door unit with forced air circulation, 6 adjustable shelves. Operates at 2.2°C. Front, top, interior and sides are stainless steel. Bottom and back are galvanized iron. Expanded polystyrene insulation, 1/3hp compressor. Exterior: 76Lx122Wx183cmH. Capac, 0.8m³. 115V 60Hz. Shp wt, 295kg (650 lb).

13-987-92815.00

Blood Banking Refrigerator, see p 542.

13-991-80

Fisher Transistor Relay

Fisher Transistor Relay Model 32 is actuated by contact closure or resistance change to either closed or open circuits depending upon the application. Perform many useful control, counting, or alarm functions. Over a million switching operations are obtainable under 15amp load current between 15° and 45°C. Will switch sensitive loads up to 1700w with ease. Can also handle lower inductive loads. Relay responds to resistance change of 1% for its 15,000 ohms to 1 megohm range.

Ordering Information: Consists of semi-conductor-circuit which drives heavy-duty electrochemical relay. Grounded input binding posts isolated from ground and power line so either post can be connected to the shield when shielded cable is used. Output receptacles take 2 types of load. Pilot light indicates whether input line is open or closed. 10Lx18Wx11cmH. Net wt, 1.8kg (4 lb). 115V 50/60Hz. Dissipates only 5w of power. Needs no warm-up. CS approved.

Personnel Safety Shields

Protect workers from flying glass and liquids

Set a safety shield in front of potentially dangerous apparatus setups. It contains flying debris, liquids, chemicals, pressure explosions, broken connections.

Three-Panel Shields

Three-panel shields protect on three sides. Or open out straight for full 147cm frontage: front panel is 76x76cm; side panels, 76x36cm. With 3 bases.

14-293-15174.00

Glass and frame only; without bases.

14-293-16142.00

Safety-Sure Base, without glass or frame.

14-293-5Ea/14.00
Set of 2/28.00

One-Panel Shields

Shatterproof laminated safety glass mounted in strong steel frames allows undistorted view of apparatus.

Shields stand firm and stable thanks to Safety-Sure Bases. Broad vise-like jaws close by lever action; grip wide 52cm² area.

Accidental bumping won't tip or break shield. Whole assembly easily portable. Mount glass in base vertically or horizontally.

One-panel shields available in 2 sizes, with or without Safety-Sure Bases. The 76x76cm size fits fume hoods; ideal for chlorinations, organic synthesis, and similar hood operations.

Size mm	No. of Bases	Cat. No.	Ea
76x36	2	14-293	79.00

Safety Wall Charts. . . Vital safety facts at a glance

Fisher Laboratory Emergency Chart

Describes treatment for common lab accidents — corrosive burns, poisoning, shock, wounds, and fractures. Specially compiled for Fisher by a group of laboratory first aid experts. 40Wx50cmH.

10-026Ea/2.40
Pk of 24/52.05

Dangerous Materials Chart

Rates chemicals from 0 to 5 by degree of health hazard, flammability, reactivity, danger of eye contact, breathing, skin penetration and irritation, and swallowing. Also listed: precautions for storing, handling, and disposing. Important properties listed: threshold limits, flash point, vapor density, density, boiling and melting points, autoignition, temperature, vapor pressure, water solubility, description, and synonyms. First aid and fire-fighting methods also described. Pressure sensitive label for local emergency phone numbers. Full-color; 89x114cm.

10-02713.00

Dangerous Drugs Chart

Lists opiates, barbiturates, amphetamines, hallucinogens with their physical and legal risks on a scale of 0 (no risk) to 5 (extreme risk). Identifies physical symptoms of abuse and withdrawal. First aid instructions for drug overdose. Full color; 76x122cm.

10-027-514.05

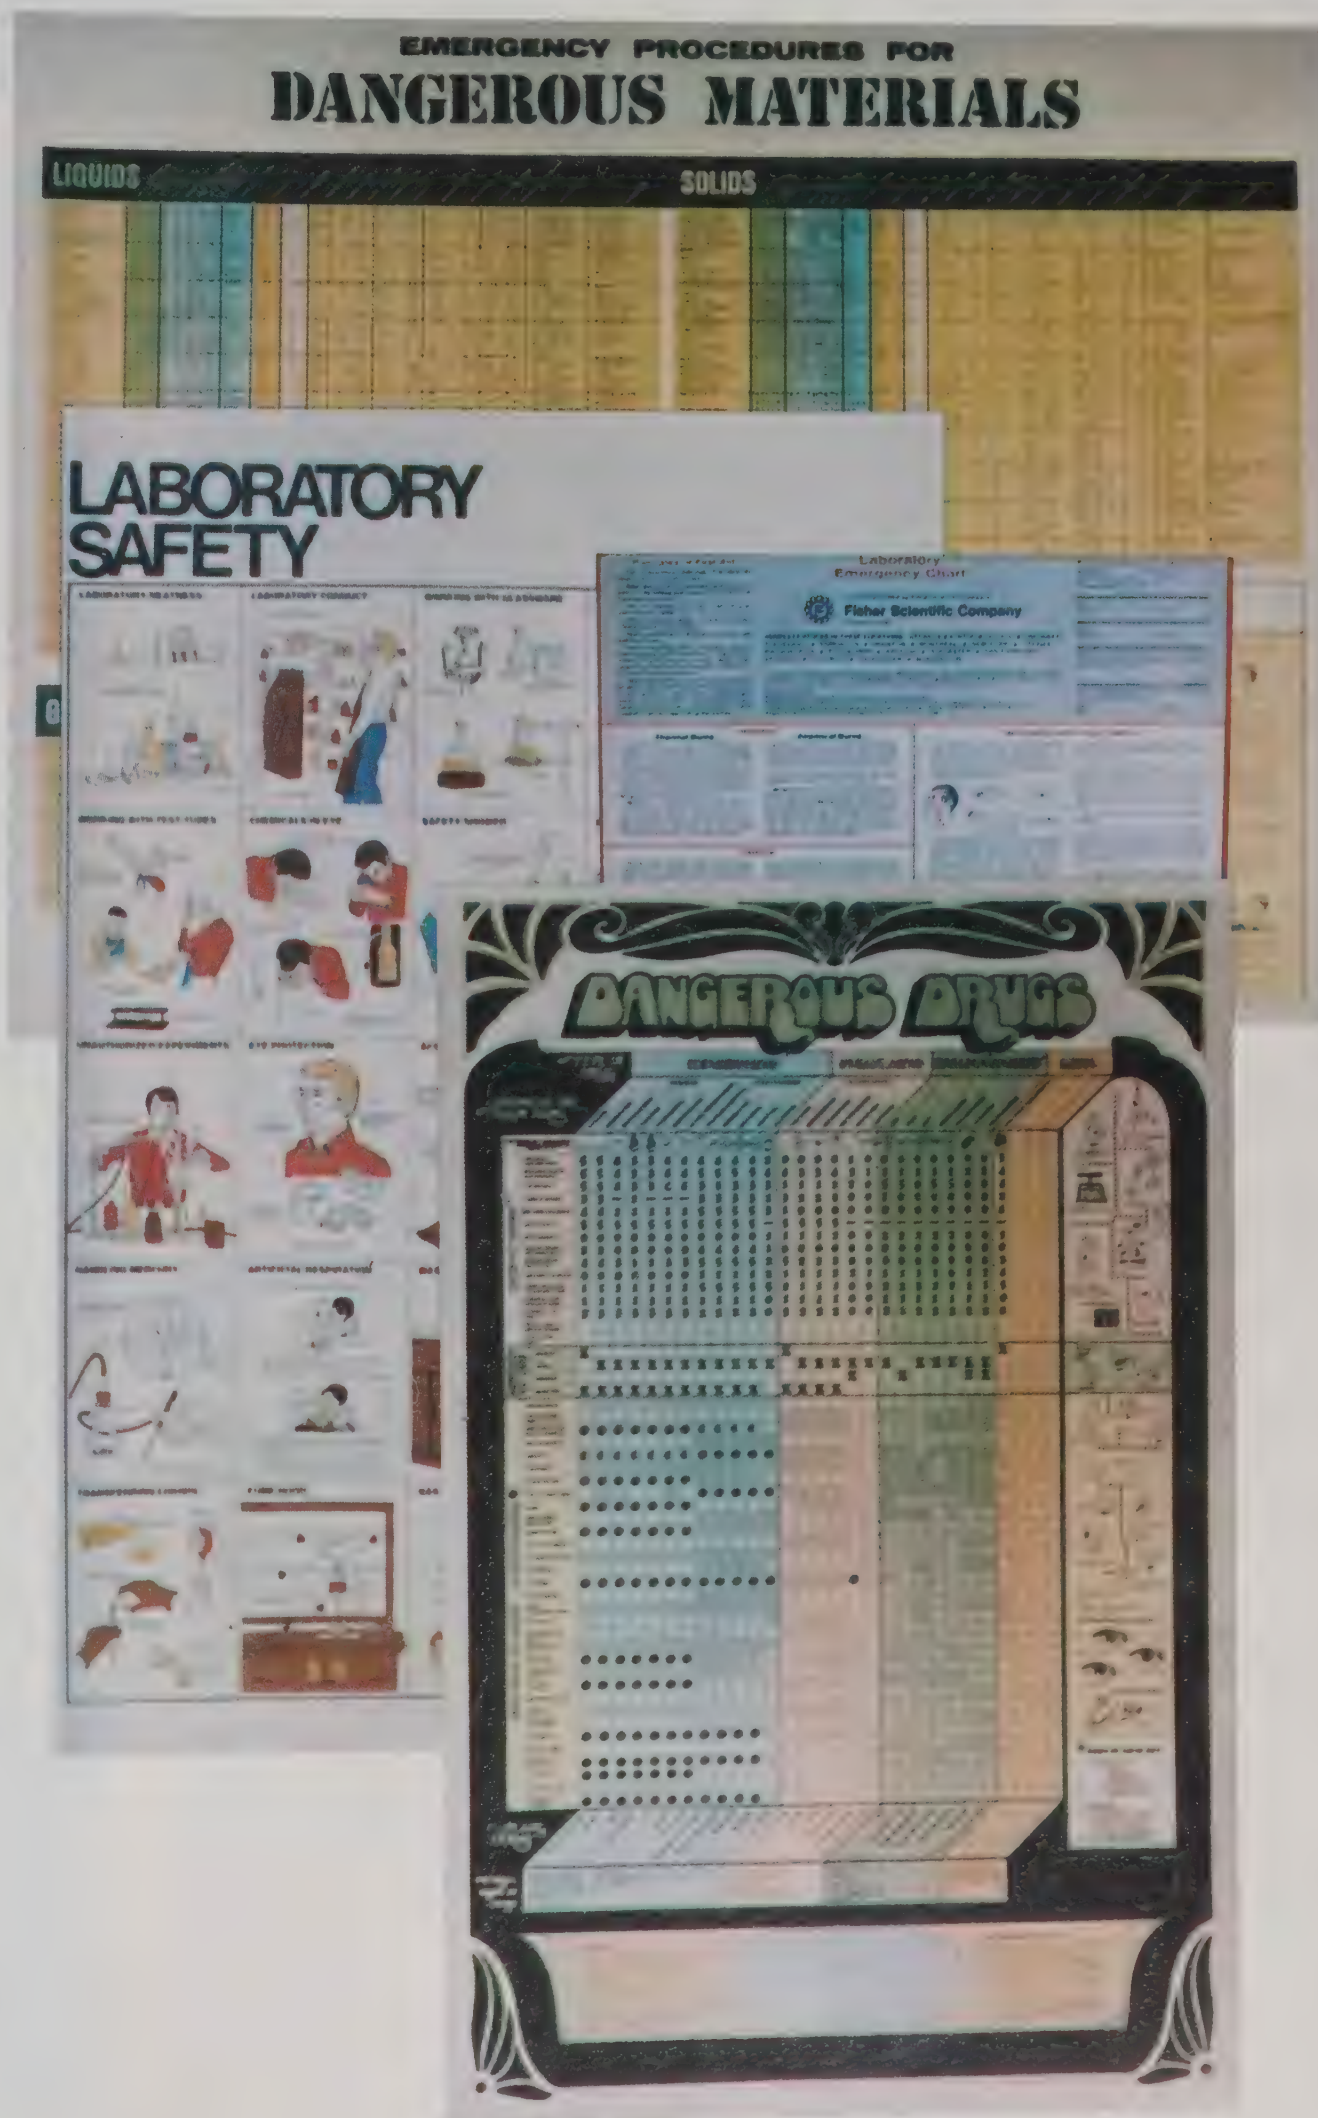

Laboratory Safety Chart

Full-color wall chart with 25 illustrations covering basic safety instructions on safety glasses, fire extinguishers, safety showers, clothing fires, eye emergency, lab dress, handling and carrying reagents and equipment, reagent spills, disposal techniques, unauthorized experiments, fume hoods, gloves, safe handling of glassware, artificial respiration, chemical labeling, and gas cylinders.

Ideal for students, industrial workers, or new personnel in chemical laboratories.

Mountings on top and bottom for wall hanging. 122Lx76cmH. In cardboard mailing tube.

10-027-1013.85

Eye/Face Washes and Safety Showers

Rinse harmful materials from eyes, face, and body

91-576

Eye/Face Washes

Bathe eyes and face in soothing stream of water to quickly remove all contaminants. Stainless-steel bowls; chrome-plated fixtures. Full-flow valves. 1/2" IPS chrome-plated brass inlets; 1 1/4" IPS drain. All meet OSHA requirements.

91-576 Hand-operated; wall-mounted. Just touch self-closing lever handle with hand. Adjustable volume control. With mounting brackets.

91-576.....162.00

91-577 Hand and foot operated; wall-mounted. Control flow with foot as well as by pushing handle which operates stay-open ball valve. Adjustable volume control. With mounting bracket.

91-577.....177.00

91-575 Hand-operated; wall-mounted. Stay-open ball valve and adjustable volume control. With mounting brackets.

91-575.....179.00

91-580 Hand-operated; deck-mounted. Place near sink, which serves as drain. Outlets have volume adjustments. Swings away from sink when not in use.

32 (946)	10-029-5	4.50

91-570

Bench-Top Hand Spray Reaches 1.83 Meters

Aerated hand spray attached to flexible 6' (1.83m) hose. Pull from sleeve in tabletop or shelving. Hand grip nozzle for quick on-off action. 3/8" IPS inlet. Meets OSHA requirements.

91-570.....89.50

Safety Showers

Just pull the ring of a Deluge Shower to provide a solid flood of water, with no voids. Release ring to stop flow. Meets OSHA requirements.

14-294-5

Ceiling-mounted. Bright yellow plastic head ideal for corrosive atmospheres. Adjustable; self-cleaning; no filtering needed.

14-294-560.15

91-586

Wall-mounted, concealed. Chrome-plated. Two pull chains and rings.

91-586.....143.80

Bench-Mounted Shower

For less hazardous areas not requiring deluge shower, bench-mounted safety shower is recommended. Ball valve stays open till closed manually; frees hands for washing and first aid. Mount against wall at rear of lab benches.

91-585.....162.00

91-590

Maximum Protection Safety Station

A complete, maximum protection safety station consisting of a free-standing emergency shower and an eye/face wash fixture.

The shower head delivers a torrent of water in a uniform pattern to wash body as completely and fast as possible. A pull chain regulates the self-closing valve. The eye/face wash is operated independently of the shower by means of a push handle which activates a stay-open ball valve. The bowl is stainless steel with chrome-plated fixtures.

Ordering Information: With shower, eye-wash fixture, stanchion and floor flange, and interconnecting piping. Shp wt 39kg (85 lb)
91-590Ea/442.10

Five Sign Kits

Meet OSHA size and color requirements

10-027-20

OSHA has established the need for safety signs in all labs — industrial, clinical, educational, environmental, and governmental. These five kits provide the signs to meet OSHA requirements.

Easy to use. Just remove backing material from self-sticking, vinyl sign and apply to clean surface. To make rigid signs, apply label to RediMount, pre-cut sheet of thick polyethylene. Display mounted signs by wrapping around poles, hanging, or mounting on walls.

Special signs for identifying hazards with NFPA symbols are also available. Just mark sign's blue, red, and yellow diamond areas with appropriate NFPA hazard rating. Makes one sign serve many purposes.

All signs printed in bright, clear colors. Meet OSHA requirements established for size, color, and message.

Starter Sign Kit

48 signs for industrial plants, labs, classrooms, or wherever chemicals and lab equipment are used. See chart for contents of kit.

10-027-2020.00

Danger Sign Kit

Contains 40 signs for identifying dangerous conditions in labs using chemicals. See chart for contents of kit.

10-027-2219.85

Fire and Exit Sign Kit

With 40 self-sticking signs for general identification of fire extinguishers and exits. See chart for contents of kit.

10-027-2619.85

General Safety Sign Kit

Assortment of 70 self-sticking vinyl signs. Meets need of average lab. See chart for contents of kit.

10-027-2424.85

Hazard Sign Kit

For identifying hazards associated with particular chemicals. See chart for signs supplied with kit. Kit also includes list of NFPA ratings for common dangerous chemicals.

Safety Film

Shows latest federal requirements for lab safety

This 24-min 16mm color/sound film entitled *28 Grams of Prevention* is a vivid reenactment of the full spectrum of laboratory accidents. Its theme is "Safety as a way of life; respect the potential dangers of the laboratory", and it shows how the OSHA regulations are readily met via preventive equipment and planning.

Film is available on free loan. It may also be purchased outright (\$150). Write to Safety Film, Fisher Scientific Co., 711 Forbes Ave., Pittsburgh, Pa. 15219.

Safety Manual

Includes all equipment and supplies for meeting OSHA requirements

This 64-page manual depicts what you need to comply with OSHA requirements — equipment and supplies for accident prevention and control, for storage and handling, and for personnel protection. Also, valuable chapters on accident prevention, first aid, and firefighting. Fully illustrated. For a copy, check no. 2 on reader service card at end of blue index pages.

Drug and Chemical Blood Level Data Chart

Two-color notebook-size chart, published by Fisher, is available without charge to toxicologists and other forensic and life science personnel. Almost 180 different substances listed. From Acetaminophen (Tylenol) to Zoxazolamine (Flexin). For each, chart gives **THERAPEUTIC OR NORMAL . . . TOXIC . . . and LETHAL** levels in blood serum or plasma. For your free copy, check 5 on reader service card at end of blue index pages.

Excellent Ways to Protect Lab Surfaces From Corrosion, Abrasion

12-007-100

Polyethylene Work Pad

Closed-cell polyethylene foam . . . smooth, non-absorbent. Ideal sink liner, titration background. 6.4mm thick. Can be cut to any size or shape. (Nalge 6281)

Size	Cat. No.	Pk of	Case of

To your health

Wall chart with 25 pictures on safety instructions: fires, eye emergencies, dress, reagents, disposal techniques, artificial respiration, and gas cylinders. Many others. Size: 4"Hx2½"W. In full color. With metal mounts top and bottom for easy hanging.

10-027-1013.85

Safety Cabinets for Safe Storage of Flammables

14-205

Vertical Safety Cabinets Provide Shelf Storage For Cans and Bottles

All-steel cabinet meets OSHA construction requirements and complies with flammable and combustion liquid Code No. 30 of National Fire Protection Association.

Sliding door closes automatically unless you engage the chain latch to hold it open. In event of fire, flames are contained within the cabinet. Chain latch is fitted with fusible metal link that melts at 160°F (71°C). If fire starts in cabinet with door open, door closes automatically as soon as temperature hits the melting point of special link. Door has 3-point latching mechanism, padded handle and lock.

Two vents accept standard 2" (51mm) pipe fittings to connect to an existing lab exhaust system. Perforated fire-baffle covers each vent.

Constructed of 18-gauge steel. Double walls with 1½" (38mm) air space. Welded joints. Four adjustable leveling feet. Sunken floor, 2" (51mm) lower than door, contains accidental spillage. Welded seams prevent leaks.

Cabinet painted bright yellow in accordance with OSHA color codes. "Flammable Keep Fire Away" printed in large red letters on front door panel.

Ordering Information

30-gal (114-liter) Storage Cabinet. Holds six 5-gal (18.93-liter) cans. Includes one 37cmD shelf which can be positioned as desired. Size: 46Lx109Wx112cmH. Shp wt. 129kg (285 lb).

14-204 525.00

45-gal (170-liter) Storage Cabinet. Holds nine 5-gal (18.93-liter) cans on shelves and floor. Includes two 37cmD shelves which can be positioned as desired. Size: 46Lx109Wx165cmH. Shp wt. 175kg (385 lb).

14-205 650.00

Horizontal Safety Cabinet For Storage of 55-gal (208-liter) Drums

Horizontal drum storage cabinet with steel entrance ramp and 4-wheel cart accessory provides a safe storage system for cumbersome 55-gallon (208-liter) drums. Cabinet meets OSHA construction requirements and National Fire Protection Association regulations.

Use 14-206-3 mobile drum rack to transport and position drums in cabinet. To move drum into cabinet just slide hook on front of cart under drum. Tilt cart back onto its four wheels. Wheel drum up cabinet entrance ramp.

Two built-in racks that bridge cabinet's sunken floor, guide cart into position. Drum (still on cart) rests in horizontal position . . . convenient for dispensing contents into smaller cans. When drum is empty, just wheel cart away.

Walls and doors of cabinet constructed of double-layer, 18-gauge steel with 38mm air space in between. Double doors secured by 3-point spark-proof latching mechanism with plated handle and key lock.

Bright yellow baked-on enamel finish resists rust, corrosion, and outdoor weather conditions. Red message: "FLAMMABLE KEEP FIRE AWAY" painted on door in large letters.

Ordering Information: With 4 adjustable leveling feet, 2 vents with perforated fire baffles and 51mm pipe fittings, 2 grounding studs, and steel entrance ramp. Seams and joints carefully welded. Measures 123Lx77Wx127cmH. Shipping wt, 206kg (455 lb). Without mobile drum rack.

14-206677.00

Accessories for Horizontal Safety Cabinet Ground Cable Assembly

For dissipating static electricity generated when dispensing flammable liquids from 55-gallon (208-liter) drum. Consists of terminal for grounding stud, C-clamp for 55-gallon (208-liter) drum, and clip for dispensing can.

14-206-132.50

Drip Can

For collecting drippage from 55-gallon (208-liter) drum faucet.

14-206-227.30

Mobile Drum Rack

Positions 55-gallon (208-liter) drum inside 14-206 safety cabinet. With spark-proof wheels.

14-206-382.00

Drum, on mobile drum rack, in position in cabinet.

14-206

Fisher Reagents in Safe-Tin™ Cans

Meet OSHA requirements
Easy to handle; unbreakable

Fisher Certified ACS Reagents in 4-Liter Safe-Tin

Safe-Tin meets OSHA requirements for storage of flammable, hazardous reagents. They're made of tin-plated steel (no broken bottles). And pressure tested. Soldered seams prevent contamination and leakage. Bright yellow and red colors emphasize the need for caution. Handle has full 4-finger grip. No slippery glass to worry about. And, wide-mouth opening means easy pouring even from full containers.

Extensive shelf-life studies have been run to assure top quality performance and purity. Lot analysis is printed right on every label.

Cases of these square 4-liter cans not only contain more fluid than round U.S. gallon jugs, but they occupy up to 55% less space in the storeroom.

Empty cans make excellent waste receptacles for hazardous chemicals. No vapors. No leakage. Saves wear and tear on sink and plumbing. Be sure to change labels to avoid solvent mix-ups.

Safety Cans for Storage, Dispensing, Disposal of Flammables

All models have these special features:

Smother flames. Double-wall flame arrestor smothers any flame at mouth of pour-spout for added safety during pouring. Guard cap protects spout. Prevents spills if can is dropped.

Reinforced bottom. Shock rim protects bottom from abrasion wear. Also acts as grip when pouring.

Convenient, safe handle. Free-swung handle on larger cans, facilitates carrying and pouring. To open, just pull handle. As pressure is released, spout cover snaps shut.

Trigger-grip handle on 1 gal cans.

Stainless or Terne Steel. Stainless cans recommended for storing alcohols, acetone, ethers, toluene, and xylene. Terne steel, for gasoline and other flammable liquids such as oil, benzene, naphtha, kerosene.

Meets safety requirements. Listed and labeled by UL. Approved by Factory Mutual. Meets OSHA requirements.

Standard Safety Cans

Capac	Steel	Handle	Cat. No.	Ea	Case of
1 gal (3.8 liters)	Terne	Trigger	4-664A	17.00	6/91.80
2½ (9.5)	Terne	Free	4-664B	21.30	2/38.35

5 (19)	Stainless	Free	4-664-9	97.68	----

Funnel Spout for Standard Safety Cans

Funnel locks onto can for pouring and filling. Self-venting. Splash-guard for quick flow. Caution-yellow polyethylene. 23Lx2.9cm OD. For standard cans 4-664, 4-664-7, 4-664-9.
4-664-121.68

Oblong Lab Cans

Capacity: 1 gal (3.8 liters). Oblong shape conserves lab shelf space. One-piece cap and Teflon® gasket. Non-drip lip. Wide pour spout for easy filling and pouring. Stainless steel. Trigger handle.
4-664-5Ea/43.66
Case of 6/235.75

Oblong Lab Can with Flexible Metal Spout

Eliminates danger while dispensing into small openings. Oblong shape. Air vent eliminates back pressure for faster pouring. Seamless construction. Terne steel. Trigger handle.
½ gal (1.9 liters) capacity.
4-664-243.08
1 gal (3.8 liters) capacity.
4-664-345.28

Safety Cans Contd.

4-664-25

Faucet Safety Can

Capacity: 5 gal (19 liters). Ideal for dispensing flammable liquids into small containers. Faucet can be securely tightened; removable for cleaning. Seamless stainless steel. Free swing handle.

4-664-25207.30

4-664-4

Nonmetallic Safety Can

Capacity: 1 gal (3.8 liters). Ideal for handling high-purity solvents normally stored in glass, stainless steel, or porcelain. One-piece molded body constructed of heavy-wall high-density polyethylene.

Large diameter spout minimizes spills during filling. Spring-loaded cap closes automatically, opens automatically for expanding vapors.

Space-saving oval shape. With stainless-steel and cadmium-plated fittings.

4-664-4Ea/24.50
Case of 3/66.15

4-664-30, 31

Disposal Can for Liquid Wastes

Wide 10cm ID opening. Cap opens 80°, locks open for filling. Opens automatically to relieve excessive pressure. Closes when pressure released. Seamless stainless steel. Free swing handle.

2½ gal (9.5 liters) capacity.
4-664-30113.44

5 gal (19 liters) capacity.
4-664-31122.25

4-664-50

Oily Waste Can

Capacity: 6 gal (23 liters). For items subject to spontaneous combustion. Lift lid by hand, or step on foot lever. One-piece lid; ventilated bottom. Stable triangular shape. Heavy steel with bright red finish.

4-664-50227.11

4-665

Flame-Tamer® Waste Can

Flame-Tamer receptacle consists of 20-gauge steel container with ventilation head.

If fire starts in this container, combustion products (CO and CO₂) rise into head's trapping cavity. Baffle reverses flow of combustion products and channels them across opening. Automatically chokes off oxygen supply and suffocates fire. Even stops explosion-type fires — explosive force immediately released through opening.

Ideal for factory and warehouse use. Approved by UL and Factory Mutual.

Fume Hood Air Flow Meters and Alarm

Lab-Larm® Air Flow Meter-Alarm

Fume hood protection may fail if duct static pressure increases or blower velocity decreases, so face air velocity drops below safe level. If this happens, Fisher Lab-Larm will warn you with shrill whistle and flashing red light.

Dual-limit pressure switch is connected by Tygon® tube to static pressure probe in hood. If pressure rises or falls more than 10% from set value, alarm will sound.

Pushbutton cuts off whistle, but warning light stays on until you switch it off. (Unit has key-lock switch.) You can check alarm periodically with test button.

Lab-Larm Airflow Sentinel can be used in any fume hood, except with radioactives, perchloric acid, and explosive or flammable materials. It meets requirements of Scientific Apparatus Makers Association. Operating range is 0.25" to 1.50" (6.4 to 38mm) water pressure. All solid-state circuits operate from 22.4V mercury cell. Warning light is light-emitting diode — can't burn out.

Ordering Information: With alarm module, pressure switch, and probe with tubing, connector, and battery.

93-150142.00

11-676-13

Table-Top Dry Ice Chest — Tough Polystyrene

Holds 23kg dry ice. Outside dimensions: 38Lx33Wx31cmH. Inside dimensions: 31Lx25Wx23cmD. Wall thickness, 38mm. Net wt, 2.3kg (5 lb).

11-676-1360.00

93-750

Velometer Air Flow Meter

Measures face air velocity and static pressure to $\pm 2\%$ of full scale.

Velometer uses 24" (61cm) Pitot probe to reach into fume hoods and ducts. Air velocity is shown on three scales: 0-300fpm (91mpm), 0-1250fpm (381mpm), and 0-2500fpm (762mpm). Static pressure also shown. Up to 3.0" (7.6cm) water with special probe and scale.

Ordering Information: In foam-lined carrying case with range selector, probes, and heavy rubber connecting hoses.

93-750602.30

93-751

Velometer Jr. Air-Flow Meter

Reads fume hood and duct air velocities on two ranges — 0-to 200fpm (61mpm) and 0 to 800fpm (244mpm) — when you hold it in air stream. It does not measure static pressures. In leather case.

Fisher Safety Tongs

Safe, secure grip for all types of containers

2-622

Deluxe Beaker Tongs

Pick one beaker out of a crowd of beakers. Tongs grip beakers safely, securely in any situation. Especially handy for beakers grouped on hot surfaces. Fiberglass-covered jaws (7.6cm lower than hand-grip) reach down to grip beaker, but hand remains safely above surrounding glassware.

Squeeze hand-grip together, till jaws firmly grip beaker (any size from 100-2000ml). Then safely tip beaker, pour from it, carry it around. Your hand is a safe 15cm from beaker.

Stainless-steel, fiberglass-covered jaws. Die-cast aluminum hand-grip. Screw-adjustment for maximum opening. 33cm over-all length.

2-622.....21.25

10-063

Deluxe Flask Tongs

Fisher Deluxe Safety Flask Tongs are essentially the same as 2-622, but modified to hold any Erlenmeyer, Florence, or round bottom flask taking No. 4 or larger stoppers. Stainless-steel jaws open to 11cm maximum. Over-all length 24cm.

10-063.....15.50

2-620

Beaker Tongs

Handle beakers, from 100-1500ml capacity, firmly in grip of Fisher Safety Beaker Tongs. Fiberglass-covered jaws. All stainless steel. 33cm long

2-620.....8.00

Flask Tongs

Flasks can't slip when gripped by Fisher Flask Tongs. Erlenmeyer or Florence flasks taking Nos. 4-8 stoppers. All stainless steel.
10-062.....5.25

10-062

Dish Tongs

Handle evaporating dishes easily and safely with unique Fisher Safety Dish Tongs. Hold dishes from size OOA to 5, or similar vessels from 75 to 120mm diameter. All stainless steel.
8-725.....11.75

8-725

Casserole Tongs

Casserole handle held securely between V-shaped lower jaw and curved upper jaw. All stainless-steel Fisher Casserole Tongs hold casseroles, sizes 1-5.
4-712.....6.50

4-712

Stool and Ladder for Safe Footing

Rolling Lab Ladder

Rolling Lab Ladder won't slip. Low center of gravity prevents tipping. Spring-loaded casters retract when you step on it and roll smoothly when weight is removed. Top step is full 76cm above floor for reaching high shelves. Three steps are reinforced steel, welded to 25mm steel-tube framework with rustproof gray finish. Rubber matting on steps. Meets OSHA requirements.

11-93076.00

11-930

Kik-Step Stool

Step on a Kik-Step Stool . . . spring-loaded casters retract for safe, sure footing. Step off the stool . . . it rolls smoothly with just a toe tap. Non-slip safety cleats. Two steel steps cushioned with rubber matting. Rubber bumper protects wall and equipment. Gray enamel finish protected by wide rubber band around base. 37Hx39cm base dia. Meets OSHA requirements.

11-93131.00

Carts and Supports for Gas Cylinders

11-929

11-929A

11-929-10

10-595

Gas Cylinder Cart

Accommodates 2 standard gas cylinders or heavy-duty vacuum pump. Secure 2 cylinders with safety strap on cart. Push cart on its rotary wheels to any place in lab — even under fume hoods for use with toxic gases. Brake mechanism locks cart in place . . . prevents movement, keeps cylinders from falling. Angled iron platform at cylinder neck level provides mounting station for gas regulating and valve device.

11-929 295.00

Table Top for 11-929 Gas Cart

Formica 41x76cm working surface with 41cmH splash back. Attaches to iron bar platform on back of cart. Accommodates 2 stopcocks for convenient delivery of gases.

11-929A.....65.00

Cylinder Safety Stand

Stationary stand with safety catch strap securely supports cylinder. Can't tip over. Eliminates danger of cylinder falling. For maximum safety, move by dolly to any location in lab.

11-929-1075.00

Cylinder Support

Cylinder Support holds 11 to 28cm dia cylinders upright and ready to use. Far more secure than makeshifts. Attach to any bench with at least 25mm overhang.

10-59514.00

Hand Truck and Caddy for Heavy Loads

Rugged Hand Truck

Heavy-gauge steel Hand Truck has built-in support frame to hold cylinders and carboys upright. Support locks against frame when not needed. Wide noseplate and heavy chains facilitate positioning. Heavy-duty rubber tires are quiet, don't damage floors. Ideal for storeroom. Meets OSHA requirements.

15-314157.00

15-314

Carboy Caddy

Caddy carries 330 lb (150kg) carboys. Just tip carboy, slide Labconco Carboy Caddy under it. 130cm² platform only 6.4cm above floor. Blue, plastic-coated 25mm square steel tubing supports carrying base of high-pressure laminate. Hard rubber ball-bearing casters; rear ones turn 360° to negotiate short corners. Meets OSHA requirements.

Extra-Hazardous Reagents Now in Safe-Cote™ Bottles

**Look what happens:
Safe-Cote vs. glass — your
choice**

It breaks, yes. But glass fragments and reagent are trapped within the bottle's plastic coating. No lacerations from flying glass. No burns from splashed acids. No messy, dangerous clean-up.

Safe-Cote bottles are 5-pint (2.4 liter) glass reagent bottles coated with tough, impact-resistant, completely transparent plastic film. Great for labs that need the benefits of glass containers (optical clarity and chemical purity) plus the safety of plastic.

Bottles also have a dripless pouring ring and finger grip for easy handling.

Color-coded polystyrene screw caps simplify identification of contents. Blue for hydro-

chloric. Yellow for sulfuric. Red for nitric. Brown for acetic. Green for ammonium hydroxide. Caps are lined with polyethylene to prevent contamination of the acid.

Your nearest Fisher branch stocks the following ACS grade reagents in Safe-Cote Bottles. Available only in cases of six bottles.

Reagents*	Cat. No.	Case of 6
Acetic Acid, Glacial, ACS	A-38-S	52.00
Ammonium Hydroxide, ACS	A-669-S	29.67
Hydrochloric Acid, ACS	A-144-S	35.00

A few words about the Fisher Instrument Service Division

For decades, Fisher has meant everything for the laboratory — including instrument repair service. Fact is, Fisher services everything it sells (even if you didn't purchase it from us originally). And now, Fisher has reorganized and improved its service network, concentrated its efforts, and enlarged its service capabilities to give you the best laboratory instrument and equipment service possible. Instrument repair and instrument preventive maintenance are now in the hands of the Fisher Instrument Service Division, called ISD.

Professional and reliable

ISD service representatives and many inside service personnel have one goal in common: prompt, efficient, total service for your laboratory instruments and equipment.

Service specialists are fully trained pros who can repair and maintain your instruments in your lab or in our local service center. They know how to solve the occasional down-time problem fast. Just as important, they know how to get your instruments up to peak performance — and keep them there.

To accommodate your budget planning, there are ISD preventive maintenance programs. They are designed to prevent the panic of emergency repairs; to help you get the best performance possible from your instruments; and to prolong instrument life.

ISD specialists will keep you informed with maintenance records for your instruments and also make safety checks or functional changes to update your instruments when necessary.

Nearby

Fisher instrument service is a phone call away — as close as your Fisher branch. Inside ISD personnel can help identify your service needs and direct a service representative to your laboratory as fast as possible. Emergency repair service is available too, so don't panic, call ISD. Most often we can be in your lab within hours.

Today, time — more than ever before — means more money than ever before. Down-time is a problem the Fisher Instrument Service Division can help prevent in your laboratory. Call your local Fisher branch and ask about ISD. Or write us for an ISD brochure. Your laboratory instruments are worth it.

Shears

Medium Weight

Cement Testing Sieves. See p 132.

Sieve Shakers. See Cement Testing, p 131.

Sonic Sifter

Separates most fine particles of varying shape, texture, and density from 850 to 38 micron. Some materials to 5660 micron, and most ultrafine particles down to 5 micron with appropriate sieves.

Sifter automatically duplicates cycle time and sifting method again and again. Duration and input power are both adjustable. Sifting method combines two motions for maximum separation effectiveness and minimum particle attrition. Vertical, oscillating column of air moves material through sieves while mechanical pulsing action breaks down cluster particles. Sieve stacks fit securely within chamber for stable testing. Easy to load and unload.

Ordering Information: Enclosed in sturdy, steel case with transparent door for observing sifting process. Three non-skid rubber feet. Controls conveniently grouped on front panel. 110-120V 50/60Hz. Weight 15kg. 26Lx26Wx58cmH. With Stack Assembly (14-294-22) and electrical connection cord. Without sieves. See listing on next page for sieves.

14-294-151595.00
(ATM L3P)

14-294-15

Accessories for Sonic Sifter

Column Lock

Ensures tight, leakfree seal between Sifter 14-294-15 and air column. Holds sieves together, prevents spillage when stack is separated from instrument.

14-294-16112.00

Dust Stop/Diaphragm

For 14-294-15. Transmits oscillatory motion to air column (60 cycles/sec), keeps particles within the column. Control amplitude of diaphragm excursion with switch.

14-294-1710.22

Top Cone

Couples sieve stack to drive mechanism on Sifter 14-294-15. Acts as spacer between diaphragm and top sieve.

14-294-187.50

Fines Collector

Stops dust at bottom of air column in 14-294-15. Transmits oscillatory motion to air column.

14-294-2013.72

Standard Spacers

Maintain necessary over-all sieve stack height when using smaller depth sieves. Required to enable Column Lock (14-294-16) to grasp and hold stack securely.

14-294-195.90

Fines Collector Holder

Supports Fines Collector (14-294-20) under tension at bottom of air column.

14-294-2169.30

Complete Stack Assembly

For sifter 14-294-15. Includes: Column Lock (14-294-16); Diaphragm (14-294-17); Top Cone (14-294-18); 6 standard Spacers (14-294-19); Fines Collector (14-294-20); and Fines Collector Holder (14-294-21).

14-294-22220.00

14-294-22

For other Sonic Sifter accessories see next page.

Fisher Scientific Company

Accessories for Sonic Sifter, Contd.

Horizontal Pulse Attachment

An electro-mechanical device designed especially for use with Model L3P Sonic Sifter, 14-294-15, p 1053. Enables user to produce repeatable test results by eliminating the human element during test procedures. Enhances the capabilities of the L3P Sonic Sifter during dry separation of difficult to handle materials, especially in the subsieve range. Designed to eliminate agglomeration.

This device performs a tapping action alternately on opposite sides of the screen frame and creates a high-speed shock wave or ripple effect within the sieve material. This shock wave prevents blinding of the sieve material by near-sized particles or by extremely fine materials clinging to the underside of the sieve; de-agglomerates most materials, minimizing errors in analysis and conserving valuable materials; and relieves the technician of the tedious task of hand-tapping the sieve.

Ordering Information: Includes control box, wrapping assembly, and connecting electrical cord. 120V 50/60Hz.

Bamboo Slide Rules

14-323

14-323-5

14-323-10

14-323-15

Slide rules of laminated self-lubricating bamboo construction. Work beautifully, even in hot, humid climates. Scales are functionally arranged, color-coded and permanently cut into white plastic face. Indicator has deeply-etched red hairline for fast, precise calculations.

4 models, each with carrying case and instruction manual:

Versatrig® ten-inch (25cm)

Advanced trig-type slide rule. Has K, DF, CF, CIF, CI, C, D, R₁ and R₂ scales on one side, with L, A, TT, Sec TST, Cos S, C, D, and DI on other.

14-32327.00

Versalog five-inch (13cm)

Pocket size log slide rule. 23 scales including C and D on both sides, R₁, R₂ for determining squares and square roots, log log and reciprocal log log scales. Log log scales cover range from 1.001 to 22,000 with reciprocal log log ranging from 0.00005 to 0.999.

14-323-524.50

Versalog ten-inch (25cm)

Same as 14-323-5 except for size.

14-323-1039.95

Student ten-inch (25cm)

For mathematical problems not requiring log log scales. A, B, CI, C, D, K, S, L and T scales.

14-323-159.30

Lab/Classroom Aids:

Jolly Giant

You can't get bigger or clearer than this 32 sq ft (3.0 sq m) **periodic chart** of the elements. Free-standing on lecture table or desk. Or wall-mount it.

This 8 ft-wide (2.4m) leviathan is really four panels, precision-hinged to fold into 2x4ft (.61x1.2m) size for convenient storage. Three bold colors on wipe-clean plastic-coated white board (heavy-duty corrugated cardboard for strength without weight). We include **storage case**.

5-702-1539.90

To your health

Wall chart with 25 pictures on safety instructions: fires, eye emergencies, dress, reagents, disposal techniques, artificial respiration, and gas cylinders. Many others. Size: 4Hx2½ftW (1.2Hx.76mW). In full color. With metal mounts top and bottom for easy hanging.

10-027-1013.85

Downright magnetic

The lab world's first 47mm filter funnel with **magnetic coupling**. Firm sure seal that can't wear out. One-hand assembly. Fully autoclavable. Transparent polysulfone (toughest plastic available).

Use with all existing manifolds. Ideal for collecting particulate matter from liquids. Has 300ml capacity, graduated scale.

9-73527.50

Spatulas

Scoopula®

Dig out materials, core, stir easily. Scoopula® minimizes spilling in handling small amounts of material. Works better than a spatula. More versatile. Curved shape, one pointed end, one blunt end lets you dig salts out of bottles, add small amounts to balance pans, core samples of dry materials, remove lids from containers, stir solutions, etc. Stainless steel is strong and won't rust. 17cmL.

14-357.....Pk of 6/2.20

Teflon®-Coated, Stainless-Steel Blade

Riveted hardwood handle.

Pk of 12/9.70

Meets ASTM Specifications E-124

Instrument has sharpened spatula measuring 32Lx1.6mmW for fine operations, and spoon, 13Lx3.2mmW for no-spill carrying of small quantities. Over-all length is 16cm. Stem dia is 2.4mm.
21-401-25A.....Ea/1.85
Pk of 12 19.95

Similar to 21-401-25A but for carrying very small quantities of material, this instrument has a bent spatula, 38Lx3.2mmW with rounded edges at one end, and a V-shaped spoon, 13Lx2mmW at the other. Over-all length is 17cm. Stem dia is 2.4mm.
21-401-25B.....Ea/1.70
Pk of 12/18.35

For cutting, separating, or crushing crystals. This instrument has a 25Lx3.2mmW spatula with a finely sharpened flat tip at one end and a small knob at the other. Over-all length is 14cm. Stem dia is 2.4mm.
21-401-25C.....Ea/1.10
Pk of 12/11.90

Specimen Collection items for blood and urine. Samples are listed in Med-Lab Section.

Vibrating Spatulas and Special Spoons

Vibro Spatula

Control feeding of powdered or granular materials to vessels with Vibro Spatula. Accuracy to ±0.1mg. Electrically powered with fingertip control. Operates on 115V 60Hz. With 3 interchangeable troughs.
1-914-25.....86.50

Vibrating Spatula

Add a little or a lot of material accurately with vibrating spatula. Vibration is hand-induced by turning a small, toothed wheel on the instrument with one finger. Blade of spatula is stainless steel, available with or without Teflon® coating for non-stick material handling. Handle is molded plastic with a convenient hole for hanging.

Blade	Cat. No.	Ea
Stainless steel	14-375-50	4.95
Teflon®-coated	14-375-51	6.15

Ellipso Spoon

Waste no materials in hard-to-reach corners of containers. Ellipso spoon is contoured to fit those corners and extract the last fraction of crystals, powder, granulated or solid substance — even thick liquids and delicate materials. Explosives, for example, can be safely handled. Instrument is made of a strong anodized aluminum alloy and won't bend or corrode. It's flameproof and autoclavable, impervious to boiling water.

JA82-850

Significantly in the forefront of AA technology . . . the

Fisher/Jarrell-Ash Model 850 Atomic Absorption Spectrophotometer

True computer control, faster set-up, simple keyboard operation

A whole new dimension in AA, from Fisher Scientific/Jarrell-Ash Division. The Model 850 is truly computer-controlled. Complete micro-processor control of the instrument via keyboard commands assures uniformity and reproducibility, independent of operator skill. Keyboard control lets you set operating parameters

in 2 to 3 minutes, considerably less time than may be required with conventional instrumentation. For routine quality control applications, Model 850 is the easiest AA instrument to set up and use.

The integral computer also monitors the settings, makes and processes all measurements. It handles the instrument calculations with exceptional accuracy. Concentration readings are automatically computer-corrected for curvature. LED digital displays keep you constantly

informed of instrument's operating status and measurement data.

Measurement accuracy is assured by the traditional excellence of the Jarrell-Ash double-beam optical system with high-resolution monochromator. Computer-controlled beam-switcher directs beam alternately through and around the flame. Adjustable lamp mount for optimal alignment. State-of-the-art sensitivity. Peak-reading capability for flameless atomization techniques.

Degree of automation can be

augmented as desired with optional accessories that provide programming, background correction, keyboard flame control, and printout of data.

Computer flexibility is part of the Model 850's planned ability to take technological advances in stride. Obsolescence is no problem. Future advances in atomizer technology will still be within the scope of the Model 850's computer.

Pushbutton simplicity

Keyboard-entered commands select wavelength, slit size, hollow cathode current, analytical mode, averaging period, readout mode. Computer sets instrument to desired wavelength and seeks out analytical line accurately to within 0.0125nm. Illuminated switches control fuel and oxidant supply. Safety interlock prevents use of nitrous oxide unless proper burner is in place.

6-digit computational accuracy

Instrument's computer directly processes raw data. Digital values for conversion to absorbance or concentration, data averaging, zeroing, curve corrections are automatically calculated and stored by the computer with 6-place accuracy. Values are not subject to noise and drifting of analog circuitry.

Drift-free performance

Digital memory avoids electronic drift of stored computational functions. The double-beam optical system obviates baseline drift and instability caused by hollow-cathode warm-up. In most cases, there is no need to wait for lamp to stabilize.

Straightforward communication

Keyboard commands are simple codes: e.g., HC10=hollow cathode current 10mA; AP3=averaging period 3 seconds; SS2=slit size 2Å. Frequently used commands have keys of their own:

e.g., Auto-Zero, Auto-Cal, Wavelength Set. Every command produces a discrete response. LED digital displays and indicators show modes and parameters with unmistakable clarity. Confirm at a glance what is happening and whether keyboard entries were as you intended. Analytical data is presented by 5-digit input/output display.

Ordering Information

Computer-operated via panel keyboard. Double-beam system with automatic wavelength selection; integral 5-digit display of absorbance, concentration, or emission intensity, with auto-zero, signal integration, automatic concentration calibration, and automatic curvature correction; premix laminar flow burner with stainless-steel head, electric flame ignition, built-in gas pressure regulators and flowmeters; and adjustable hollow cathode mount. Bench space, 43Lx89cmW. Over-all H, 48cm. Wt, 127 kg (280 lb). Without hollow cathode lamps or deuterium light source for automatic background correction. 250w.

For 115V 60Hz.

JA82-85010,900.00

For 230V 50Hz.

JA82-85110,900.00

For detailed bulletin on the Model 850, check no. 16 on reader service card at end of blue index pages.

Accessories:

Automatic Programmer

Lets you pre-program routine analyses for total automation. Operator prepares punched programming strip. Simply insert strip into slot on Model 850 panel and press READ CARD key. Computer reads the strip and sets up parameters accordingly. Saves operator time and insures uniform conditions for often-used tests. Factory-installed at no charge when purchased with instrument. Includes key-operated punch, reader, and supply of strips.

JA82-8591350.00

Deuterium Background Corrector

Continuum light source with power supply. Enables Model 850 to correct for background automatically by simply pressing BACK CORR key. Particularly important to assure accuracy in trace metal analysis by flame or flameless techniques. Factory-installed at no charge when purchased with instrument.

JA82-8541140.00

Automatic Gas Control Panel

Provides start-up and shut-down of flame by keyboard-entered commands. Replaces standard manual gas panel. Includes flame and pressure sensors. Shuts off gases safely in proper sequence if any required condition fails to be met. Factory-installed at no charge when purchased with instrument.

JA82-8651200.00

Graphite Tube Atomizer. For flameless AA determination of trace metals down to 10^{-14} g. See JA82-535 on p 1066.

Furnace Interface/Cable. For connecting Model 850 to Graphite Tube Atomizer.

JA82-84735.00

Fisher Printer. Compact unit prints out 4 digits of Model 850 reading plus 2-digit ID number. See 14-385-113 on p 1098.

Printer Interface/Cable. For connecting Model 850 to Fisher Printer.

JA82-86085.00

Model 850 Specifications

Measurement System:	Time-shared, double-beam optics. Electronic modulation of light source.
Monochromator:	Czerny-Turner, 0.4m focal length.
Grating:	40x40mm; 1180 grooves/mm; blazed @ 2400Å.
Wavelength Range:	1900 to 9000Å. Automatic selection via keyboard. Setting shown on 4-digit LED display.
Spectral Bandpass:	Continuously variable, 0.3 to 20Å. Keyboard selectable. Size shown on LED display.
Hollow Cathode Current:	0 to 32mA. Keyboard selectable. Shown on LED display.
Digital Computer:	Processes signals from photodetector circuit. Performs demodulation, all signal conditioning. Controls measurement and readout.
Electronic Circuitry:	Solid-state. Plug-in circuit cards.
Photodetector:	Selected 456HA quartz-window photomultiplier.
Data Readout:	5-digit LED display; characters 7.6mmH.
Averaging Period:	0.25 to 99sec. Keyboard selectable. Shown on LED display.
Analytical Modes:	AA without or with background correction (requires JA82-854 accessory — see below); flame emission; peak reading.
Burner:	Low noise, laminar flow, premix type with 10cm slot in stainless-steel head (titanium option available). Disassemble without tools for cleaning. Adjustable vertically, horizontally. Rotatable. Reference scales for repositioning. Stainless-steel nebulizer with tantalum venturi, stainless-steel capillary. Polypropylene mixing chamber with pressure-relief port. Safety interlock for optional nitrous oxide head.
Gas Controls:	Flow adjustable by panel controls, internal regulators. Monitored by panel flowmeters. Open and close valves by pushbutton switches. Pushbutton electric ignition. Pressurized internal fuel lines are metal.

Fisher/Jarrell-Ash

Dial-Atom™ III**Atomic Absorption Spectrophotometer****Research-grade performance at low cost**

Economical workhorse with push-button convenience, sensitivity of higher-priced units.

Pushbutton controls provide fast set-up and simple operation. Sensitivity and detection limits for many metals are equal to those obtained in higher-priced instruments. Advanced features include LED digital data display, automatic zeroing even in flame emission mode, data averaging, curvature correction in concentration mode.

Crystal oscillator controls timing and digital functions independently of line frequency. Signal integration for high noise rejection. Synchronous chopper for flame emission measurements. Choice of 3 recorder readout modes includes special "bar-graph" display for maximum reading ease. Connection for printer. Built-in warm-up provision for hollow cathode lamps to expedite multi-element analysis.

This easy-to-use model, priced within the means of even small laboratories, is great for day-in, day-out testing. Use it for water and wastewater analysis, bio-medical specimens, plants, soils, fertilizers, plating solutions, metallurgical samples, lubricants, petrochemicals, geological samples.

Direct concentration readout

Panel controls permit calibration for direct readout in concentration in either AA or flame emission mode. Curvature correction may be applied if necessary.

Bar-graph display

Selection of recorder signal modes includes standard analog readout, high speed readout for accurate tracings in flameless AA, and easy-to-read bar-graph display. In bar-graph mode, integrated signal appears at recorder output for 5 seconds at end of selected integration period.

JA82-760

Fully regulated power

Variations of $\pm 10\%$ in line voltage have no effect on performance. Internal crystal oscillator avoids dependence on line frequency. Makes the instrument ideal for remote or mobile laboratories with local generator sources of questionable stability.

Ordering Information: Includes 0.25m monochromator with high efficiency grating, pushbutton function selectors, LED data display and function indicators, auto-

zero, concentration calibration, curvature correction, BCD printer output, fully regulated power supplies, provisions for independent operation of 2 hollow cathode lamps, laminar flow burner, integral gas flow controls and flowmeters, air/nitrous oxide switch-over control. Bench space, 41Lx69cmW. Shipping wt, 79.4kg (175 lb). Without lamps.

For 115V 60Hz.**JA82-760**5200.00**For 230V 50Hz.****JA82-761**5200.00

Fisher Printer. See 14-385-113 on p 1098.

Printer Interface/Cable. For connection of Dial-Atom III to Fisher Printer.

JA82-71940.00

For detailed bulletin on the Dial-Atom III, check no. 17 on reader service card at end of blue index pages.

Dial-Atom III Specifications

Optical System:	Single-beam. Czerny-Turner monochromator, 0.25m focal length. High-brightness grating, 30x32mm, 1180 lines/mm, blazed @3000Å.
Resolution:	2Å. Fixed slits, 50 and 75μm.
Wavelength Range:	1937 to 8600Å. Selector drum calibrated in nm. Analytical wavelengths marked by element symbols.
Digital Readout:	Maximum reading 1999. Decimal point selectable. LED display, high visibility.
Readout Modes:	Absorbance, concentration, emission. Pushbutton-selected. Continuous data update or single persisting display after integration interval.
Integration Period:	1, 4, or 16sec. Pushbutton-selected.
Photodetector:	Selected 456HA quartz-window photomultiplier.
Electronics:	Solid-state, integrated circuits on plug-in boards. Lock-in amplifier. Pre-programmed analog computer. Crystal clock. Digital logic system to control readout functions.
HC Current:	Two independent power supplies, each with switch-selected output of 2, 3, 5, 7, 8, 12, 15, 20, 24, 28, 35mA. Prefocused, pre-aligned mount. Built-in pre-warmer.
BCD Output:	Integrated signal value delivered to printer terminal at end of integration interval.
Recorder Output:	0 to 10mV. Three signal modes (see text).
Burner	Laminar flow, premix type. Stainless-steel head with 10cm slot. Internal surfaces polypropylene or polyvinyl fluoride. Adjustable vertically, horizontally. Internal pressurized fuel gas lines are metal. Pushbutton igniter. Titanium burner with 5cm or 10cm slot optional.

Fisher/Jarrell-Ash

Model 810 Atomic Absorption Spectrophotometer

The versatile one

Unique dual-channel, double-beam system provides the researcher new levels of analytical precision. Unprecedented flexibility. Dependable performance and ease of operation. Great for routine analyses.

Two-line background correction capability ensures accuracy without appreciably degrading detection limits. Versatile recorder outputs make the Model 810 an ideal instrument for use with graphite furnace systems. Direct digital concentration readout with curvature correction. Wavelength scanning drive in one channel.

4 dual-channel modes:

(1) Both channels for AA. Use of the two channels for sequential analysis of two metals in same sample can cut analysis time almost in half.

(2) One channel for AA, the other for flame emission. Advantages of both techniques utilized conveniently with same sample.

(3) One channel for analysis, the other for background absorption (automatically subtracted).

(4) One channel for analysis, the other for monitoring an internal standard.

Ordering Information: Dual-channel, double-beam system with two 0.4m Ebert monochromators, one equipped with 5-speed wavelength scanning drive; integral 4-digit display of absorbance, concentration, or emission intensity, with auto-zero, signal integration, curvature correction, scale expansion; premix laminar flow burner with pushbutton ignition, built-in gas flow controls and flowmeters; and 2 adjustable hollow cathode lamp mounts.

Bench space, 56Lx130cmW. Over-all H, 69cm. Wt, 215kg (475 lb). Without lamps.

For 115V 60Hz.

JA82-810.....16,800.00

For 230V 50Hz.

JA82-811.....16,800.00

Fisher Recordall® Strip Chart Recorders. One- and two-pen models, suitable for use with Model 810 AA Spectrophotometer, see 13-939-10, 13-939-20, and 13-939-22 on p 1008.

Model 810 Specifications

Measurement System:	Two independent channels, each with its own monochromator and double-beam optics. Electronic modulation and synchronous ratio detection, signal integration. Four dual-channel analysis modes (see text).
Monochromators:	Ebert, 0.4m focal length.
Gratings:	Quartz, 58x58mm; 1180 grooves/mm; blazed @ 3000Å.
Wavelength Range:	1900 to 9000Å. Settings shown on 4-digit counters, accurate to $\pm 2\text{Å}$. Two automatic filters eliminate second order interference.
Scanning Speeds:	2.5, 5, 10, 20, 40 Å/min.
Spectral Bandpass:	0.3, 1, 2, 4, 10Å. Switch selectable.
Hollow Cathode Current:	Continuously adjustable, with 2 panel meters.
Electronic Circuitry:	Solid-state. Plug-in circuit cards.
Photodetectors:	Two selected photomultipliers.
Digital Readout:	Range 0 to 1.000. Illuminated 7-segment characters 22mH. Automatic decimal placement.
Recorder Outputs:	0 to 10mV, for single- or dual-channel recorder. Use of 2-pen recorder enables simultaneous recording of signal from both channels.
Burner:	Laminar flow, premix type with 5cm and 10cm slots in PVF-coated stainless-steel head. Corrosion-resistant throughout: nebulizer venturi is tantalum, spray chamber is polypropylene. Disassemble without tools for cleaning. Adjustable vertically, horizontally. Rotatable. Reference indicators for repositioning.
Gas Controls:	Panel-operated solenoid valves control flow of fuel and oxidant. Flow monitored by 4 panel flowmeters. Pushbutton flame ignition.

For detailed bulletin on the Model 810, check no. 18 on reader service card at end of blue index pages.

JA82-810

Accessories: Fisher/Jarrell-Ash AA Spectrophotometers

JA32-006

Atomic Absorption Methods Manual

Useful, convenient compilation of procedures and reference material. A great help for operators at all levels of experience, in all types of laboratories, and with any AA system. Contains test data and methods for 61 elements and for various sample types such as water and wastewater, petroleum products, metallurgical samples, cement, clinical specimens, grain, beer, wine.

Methods are clearly presented in an easy-to-follow format, with index tabs on heavy, reinforced pages. Includes parameters for AA instrument and for flame emission if applicable, preparation of sample and standards, interferences, background correction, special suggestions, lamp spectra, references, space for notes. Introductory section contains general discussion of theory and basic techniques, conversion tables, bibliography. In addition to test element index, methods are indexed by sample type.

Over 400 pages. Study loose-leaf binder lets you add future supplements provided free to manual owners.

JA32-006

\$500

JA82-535

Graphite Tube Atomizer

Pushbutton furnace for flameless AA

Improved sensitivity for trace metal testing

Jarrell-Ash FLA-100. Consists of cycle-programming control console and graphite-tube atomizer head which snaps quickly into place in any Jarrell-Ash AA spectrophotometer. Many element detection levels are as low as 10^{-12} g, some 10^{-14} g. Optimal sample size, 1 to $20\mu\text{l}$; maximum, $50\mu\text{l}$. High tube temperature of up to 3000°C may eliminate need for sample treatment — can save considerable time.

Console automatically triggers output for integrators, starts and stops recorders in synchronization with atomization cycle (or continuous recording can be used). Pushbutton switches initiate 3 pre-programmed process cycles of drying, ashing, atomizing.

Sample is injected into central hole of small, open-ended graphite tube through which spectrophotometer beam is directed. Graphite tube is designed with holes near ends to increase length and uniformity of hot zone; decreases sample carry-over. A pre-programmed flow of inert

argon gas is used to allow pyrolysis of sample and to protect system at the atomization temperature. True air ashing can be used if preferable (as with organic materials) by automatic program cycle which introduces argon only during atomization cycle.

Three complete sets of time, temperature, and power ramping controls are provided for independent pre-programming of the 3 process cycles to meet sample needs:

(1) Drying cycle. Gentle heating to drive off solvent. Time range, 0-60sec.

(2) Ashing cycle. Increased temperature to break down complexes, volatilize everything but sample. Time range, 0-180sec.

(3) Atomizing cycle. Element of interest converted to free atoms at temperatures to 3000°C , at controlled heating rate. Time range, 0-30sec. Option of flash atomization (by omission of ramping) improves performance with carbide formers.

Clean-up mode heats tube 10% above atomization temperature, with continuous flow of argon, to drive off any residue.

Ordering Information: Includes control console and water-cooled atomization head with graphite tube. Solid-state timing and control circuitry. Independent programming controls for drying, ashing, atomizing. Three gas flow programs. Panel-mounted ammeter and gas flowmeter. Current-regulated power supply. With all necessary connecting cables and rapid-disconnect inlet and outlet for cooling water. Console dimensions, $30\text{L} \times 50\text{W} \times 40\text{cmH}$; can be placed up to 1.5m from AA unit. Wt, 55kg (121 lb). 220V 50/60Hz, 30 amp.

JA82-535.....4590.00

Fisher/Jarrell-Ash Hollow Cathode Lamps

Highest light output available

The standard lamps for Jarrell-Ash AA units; manufactured by Westinghouse Electric Corp.

Interchange them without re-alignment . . . mica discs center cathode in body. They confine discharge to forward surfaces to increase intensity. Patented shielded design means high output and excellent stability with low noise. Pyrex or quartz windows fused to body (no cement) . . . lamps out-gassed at higher temperature. Cleaner cathodes, purer spectral output. Guaranteed for service period of 5amp-hr or 24 months from date of shipment, whichever occurs earlier.

Hollow Cathode Lamps for All Perkin-Elmer AA Instruments

These are direct replacement hollow cathode lamps; no adapters, cabling, or equipment modification required.

Manufactured for Fisher by Westinghouse Electric Corp. Many outstanding features: All Westinghouse-patented shielded design; high spectral output, long operation and shelf life, excellent stability, high transmission windows, high resonance-to-ion line ratios, and low noise. Guaranteed for 5amp-hr or 24 months from date of shipment, whichever occurs earlier.

JA82-306 Shown with lamp and JA82-308 cable.

Electrodeless Discharge Light Source

Low-cost EDL system provides stable light source for ALL hollow cathode type atomic absorption spectrophotometers. High intensity; low noise. Spectral output is up to 50x that of hollow cathode lamps.

Suitable for elements whose hollow cathode lamps have low light output such as arsenic, selenium, tellurium. Ideal for determining trace metals in industrial samples, measuring wear metals in lubricating oils, monitoring water quality.

Radio-frequency power supply warms up fast — without external heating. Easy to operate. Uses single-element lamps which fit all commercial AA instruments with 38 or 51 mm hollow cathode lamp holders. No adapter needed.

Operates in continuous mode, for systems with mechanical beam choppers, or in synchronized pulses from 0 to 2000Hz, either negative or positive, for systems with electronic beam choppers. System's life: over 500hr.

Ordering Information:

EDL Power Supply. Compact. 29Lx 26Wx15cmH. Operates at 27.12mHz. No RF radiation. Without lamps or connecting cable.

Voltage	Cat. No.	Ea
120V 60Hz	JA82-306	1500.00
230V 50Hz	JA82-307	1500.00

Coleman Flame Photometers

Two versatile units:
Model 51 . . . for
serum Na, K, Li . . . and
urine Na, K
Model 51Ca . . . for
serum Ca, Na, K, Li . . . and
urine Na, K

Multi-element determination in single dilution of micro clinical samples. Rotating tray for rapid handling of samples and standards.
Simply dilute 20µl samples 1:100. Load 20-position sample tray. Standardize instrument (just once per tray load). Rotate tray. Aspirate. Read concentration on large 18cm meter in mEq/liter Na, K, or Li. Model 51Ca also gives readings for Ca. High photometric stability due to high temperature total consumption burner.
Pushbutton igniter produces stable flame. Operates on oxygen plus natural or propane gas with no modification. Operating instructions printed right on front panel. Simple connection to 10mV or 1V recorder. All solid-state electronics mounted on plug-in circuit board.
Model 51Ca provides Ca values within 0.2 mEq/liter of Pybus atomic absorption method — the NBS referee method. (Values outside normal 3-6 mEq/liter range should be checked by other procedures.)

Specifications for Models 51 and 51Ca

Ranges (mEq/liter):

Serum Na	75-175
Serum K	0-10
Serum Li	0-5
Serum Ca (Model 51Ca)	0-10
Urine Na	0-400
Urine K	0-400

Aspiration Rate: 1.5ml/min

Min Sample Vol: 20µl

Dilution Ratio: 1:100

Precision:

Serum Na	±1.5mEq/liter
Serum K	±0.1mEq/liter
Serum Li	±0.1mEq/liter
Serum Ca (Model 51Ca)	±0.1mEq/liter
Urine Na	2% coefficient of variation
Urine K	2% coefficient of variation

Gas Supplies Required:
O₂ @ 0.9kg/cm²; propane @ 3.8cm H₂O, or natural gas @ 13-18cm H₂O

Ordering Information:

Model 51 Flame Photometer. With sample holder; sample cups (10 red, 100 blue); atomizer and burner assembly; 2 fuse assemblies; dust cover; 3m gas hose; 3m oxygen hose with surge valve; propane reducer assembly; instructions. Size: 24Lx50Wx42cmH. Shp wt, 16kg (35 lb). 115/230V 50/60Hz.

Corning Flame Photometers

Digital Readout of Na, K, Li in mEq/liter

Precision Model 450: Na, urine K in tenths; Li, serum K in hundredths

Economy Model 430: Na, urine K in units; Li, serum K in tenths

Both models cover ordinarily encountered concentration range. Model 450 provides additional decimal place of data and uses a single automatic dilution for Na, K, and Li. Model 430 uses automatic dilution for Na and K, manual dilution for Li. Pushbutton dilutor (purchased separately) aspirates and dilutes sample, and presents it to flame.

Operation is simple with both models. Push power button, then dilutor button. Introduce unprepared sample. Flame ignites automatically. Dilutor mixes sample with internal standard diluent and distilled water in correct ratio, injects mixture into flame. Na and K values displayed simultaneously on electronic digital readout. Just change internal standard for Li determinations. Total time per sample: 30sec. Dilutor automatically flushes system between samples to eliminate contamination.

Automatically compensates for variations in air or propane fuel. Flame ignites as soon as proper air/fuel ratio is present. If fuel or air failure occurs, warning lights flash on front panel and fail-safe sensors shut down system. Unit won't restart until malfunction is corrected. Also, if level of internal standard falls below prescribed limits, digital display blanks out until condition is corrected.

Working system requires 10-033-52 Air Compressor and the correct Dilutor in addition to Flame Photometer. Model 450 Flame Photometer uses Model 449 Dilutor. Model 430 Flame Photometer uses Model 429 Dilutor.

Ordering Information:

Model 450 Flame Photometer. Electronic digital display to second decimal place. BCD output allows use with printer, printer/turmtable, or EDP system. With propane regulator, standard solutions, instruction manual. 59Lx43Wx58cmH. 115V 60Hz. 10-033-51 Dilutor must be ordered separately
10-033-504200.00

Model 449 Dilutor. Required for Model 450 Flame Photometer. Dilution ratio 1:100. Liquids are handled by tubing pump with direct-drive Teflon® roller to minimize wear (no belts to replace).
10-033-51490.00

Model 430 Flame Photometer.

Electronic digital display to first decimal place. With propane regulator, standard solutions, instruction manual. 59Lx43Wx58cmH. 115V 60Hz. 10-033-29 Dilutor must be ordered separately.

10-033-283450.00

Model 429 Dilutor. Required for Model 430 Flame Photometer. Dilution ratio 1:200. Liquids are handled by tubing pump with direct-drive Teflon® roller to minimize wear.

10-033-29490.00

Air Compressor. Model 349. Provides necessary air source for Model 450 or 430 Flame Photometer. Quiet, maintenance-free. Diaphragm pump, 1/8hp. No oil, no carbon contamination. Pressure, 2.1kg/cm². Pumping rate, 42 liters/min. With water separator and regulator assembly. 115V.

Turner Model 510 Flame Photometer

Digital readout of Na, K, Li in diluted serum, urine samples

Control console designed for simple trouble-free operation, maximum readability. Push-button controls. Digital readout, large easy-to-read numbers visible under all lighting conditions. Simultaneous presentation of Na and K ratioed to Li standard. Lithium displayed independently.

Sample probe moves to sample (not vice versa); speeds one-hand operation. For series testing, line up sample cups on rack; move past sample probe. Easily assay 60 prediluted samples in 6 min.

Automatic ignition flame unit burns either bottled propane or piped natural gas. Externally adjustable fuel control and "peephole" for viewing flame. Safety circuits protect system in case of air or gas malfunction.

BCD output for computer or printer; analog output for recorder. Important signals: "Flame On" or "Do Not Read" when no sample being introduced. "Hold" button freezes value on display. "Print" button for automatic printout on accessory printer.

Ordering Information: Consists of flame unit with built-in air compressor, control console, starter kit of standard solution and Li

diluent, instructions. Control console, 41Lx37Wx24cmH. Flame unit, 44Lx29Wx47cmH. Wt, 34kg. Does not include dilutor. 105-130V 48-65Hz.

Turner Model 430 Spectrofluorometer

- **Wavelength selector dials for excitation, emission**
- **Direct-reading in concentration**

Both excitation and emission wavelengths selected by simply turning dials. Wavelength displayed numerically. Two monochromators are controlled by precision sine-bar mechanism (instead of cams) to insure permanent accuracy. Also allows setting monochromator to zero. Select any wavelength to plot excitation and emission spectra.

High-pressure xenon lamp has smooth spectral distribution from UV to near IR. Eliminates chance of peaks at mercury lines, common with mercury lamps.

Read concentration directly, accurately over wide range. Readings can always be taken from upper $\frac{2}{3}$ of meter for greatest accuracy without rereading standards or blanks, due to several interrelated features: automatic blank suppression (independent of sensitivity controls); exact range-change; 2 meter scales integrated with range selector.

Ordering Information: With temperature-controlled single sample holder; xenon lamp; power supply; 1 square borosilicate glass cuvet (10x10x75mm); operating and service instructions; Fluorometric Clinical Procedures; one trial kit. Wt, 40kg. For 105-130V 48-65Hz

7-117.....4395.00

Xenon Lamp, replacement
7-117-5.....173.00

Specifications of Model 430

Sensitivity: 5 parts per trillion. In normal operation, instrument used in lower range selector settings.

Wavelength range: excitation, 200-1000nm; emission, 300-700nm.

Wavelength readout: direct on digital counters, ± 2 nm accuracy throughout range.

Bandwidth: excitation, 15nm; emission, 15 and 60nm.

Meter: 14cm taut band; 2 scales, 0-100 and 0-33. Mirror eliminates parallax.

Photometric meter accuracy: $\pm 1\%$.

External output: 0-1VDC, positive grounded; accuracy $\pm 0.2\%$.

Range selector: precision ranges of 1, 3, 10, 30, 100, 300, 1000 ($\pm 1\%$); high-low switch approx 30:1; continuous control covering over 4:1.

Blank suppression: automatic (independent of sensitivity controls) with 2 ranges; coarse and fine adjustments in single potentiometer

Light source: 150w xenon lamp with off-axis ellipsoidal mirror. Convection cooling.

Light control: solenoid-operated shutters over light source and photodetector, controlled from front panel or remotely

Sample holder: square cuvet 10x10mm light path x 45-75mmH or 12x75mm round cuvet. Min sample vol: 2.2ml in square; 1.8ml in round.

Temperature control: jacketed sample holder keeps temperature within 1°C of external waterbath temperature. Range: dew-point to 50°C .

Electronics: 100% solid-state-integrated circuitry.

Dimensions: electro-optical unit, 53Lx30W x28cmH. Power supply, 22Lx41W x23cmH.

Turner Filter Fluorometers are listed on p 354

Water/Wastewater Testing?

The Fisher Water and Wastewater Analysis Methods Manual, with step-by-step procedures for over 40 current APHA and EPA tests, is yours for the asking. In easy-to-read form, this valuable handbook also contains illustrated descriptions of recommended equipment, reagent listings, handy reference tables, conversion factors. Includes latest instrumentation and test kits conforming to standard method requirements. A great help for anyone in the field. For your copy, just check no. 3 on reader service card at end of blue index pages.

Accessories for Model 430 Spectrofluorometer

Wavelength Drive for Automatic Scanning

Simple to install; need not be removed for manual operation. No additional light source and power supply necessary. Selector switch for driving excitation or emission monochromator at 100 or 250nm/min. Neutral position for manual adjustment of monochromators. On-Off switch starts drive motor instantly; allows synchronizing with strip-chart recorder. Expensive x-y recorder not necessary.

Drive goes from long to short wavelengths; minimizes effect of photodecomposition by shortwave UV. 120V 60Hz.

7-117-7399.80

7-117-10

Automated Chemistry Adapter

Fluorometric analysis with AutoAnalyzer*

Enables use of Model 430 Spectrofluorometer with Technicon AutoAnalyzer I and II Systems to perform automatic fluorometric analyses. Produces good resolution of flowing samples over wide range of sample sizes and flow rates.

Simple connection to AutoAnalyzer manifold. Easily interchanged with other Model 430 sample compartments. Can be quickly removed to change Model 430 back to manual operation. With cell holder, flow cell, debubbler, field lenses, recorder coupling.

7-117-10320.00

Flow Cell Assembly. Volume: 0.023ml. Volume in light path: 0.017ml. ID: 3.1mm.

7-117-1115.35

Debubbler Assembly.

7-117-1212.30

Field Lens. Round, borosilicate glass.

Propane Gas

FISHERbrand®/Echo Propane Refillable Cylinder Plan

Saves money, avoids storage problems

Save 40 to 50% over disposable cylinders and have high quality propane for your flame photometer. Echo Gas Plan works like this (your local Fisher representative will be happy to help you work out the details):

Estimate your yearly propane usage. Minimum of 4 cylinders required for smooth operation. To start, we'll ship you a 60-day supply of filled cylinders. As cylinders become empty, return them . . . continue using remaining supply. Meanwhile, we quickly refill and return cylinders to you.

Plan provides automatic 3 to 4 week inventory. Cylinders shipped in pre-labeled mailing cartons for easy return shipping via insured parcel post. You are not charged for the cylinders. Initial shipment includes 10-032-905 Universal Adapter.

Ordering Information:

Propane Refill. Purity at least 99.2%. With exact analysis sheet. 4 lb 6.5 oz (2kg) volume by weight. Provides about 40hr continuous use. 23x23x23cm carton. Shipping wt of full cylinder, 6.4kg (14 lb); empty, 4.1kg (9 lb).
10-032-901.....Case of 2/40.00

Adapter Assemblies

Convert flame photometers currently using disposable propane fuel cylinders for use with Echo returnable cylinders.

FISHERbrand® Propane in Disposable Cylinders

Instrument grade for flame photometers

Fuel contents: 14.1oz (400g) by weight. Volume: 0.212m³ at 15.5°C/1 atmosphere. Minimum purity, 99.2% C₃H₈. Cylinder pressure 7.7kg/cm² at 21°C. Service life greater than 8hr operation.

10-031Case of 12/65.00

10-032-901

Universal Adapter for IL, Turner, Corning, Radiometer, and other leading flame photometers.

10-032-90524.80

Adapter for Technicon flame photometers only.

10-032-90624.80

Dual Output Adapter. Allows attaching 2 flame photometers to same cylinder.

Bausch & Lomb Spectronic® 20 Spectrophotometer

Worldwide favorite for clinical, educational, quality control, and industrial laboratories

Over 125,000 sold throughout the world. Accurate, stable, and exceptionally easy to use. Simplicity makes it a natural for teaching purposes and for routine testing. Suitable for use as colorimeter. Bausch & Lomb has made available a considerable range of diversifying accessories, reagent systems, and applications literature to aid use for specific analytical requirements.

Covers spectral range from 340 to 600nm ... and to 950nm with quick-change accessory phototube and infrared filter. Continuous wavelength selection throughout range. Diffraction grating with 600 grooves/mm blazed at 5000Å. Adjustment of slitwidth or sensitivity not necessary. Grating dispersion linear. Output constant.

All readings (transmittance and absorbance) made from large 14cm mirrored scale. Only three control knobs. Pilot light indicates when meter is on.

Built-in fan keeps sample compartment cool to assure stable readings and good agreement between instruments.

Electronic and mechanical elements separate from optical system. Prevents dust from reducing optical efficiency. Optical system completely shielded from outside light for error-free operation even in bright light.

Low maintenance thanks to solid-state components and plug-in modular construction. One-piece cover protects interior from contamination. Drainage hole in bottom of sample compartment for liquid spillage.

Sample holder accommodates 12.7mm test tube; adapters available for 19 and 25mm tubes plus 12.7mm square cuvetts.

Spectronic 20 Specifications

Wavelength range:	340 to 950nm (with accessory filter and phototube)
Spectral slitwidth:	20nm
Stray light:	less than 0.5% over full range (with appropriate filter)
Wavelength accuracy:	better than 2.5nm
Wavelength readability:	1.0nm
Photometric readout:	14cm mirrored scale meter. Readout in linear T and nonlinear absorbance units.
Photometric range:	0 to 100% in T, 0 to 2.0 in A
Photometric accuracy:	better than 2.0% T
Accessory output (regulated model only):	0 to 1.0V

Ordering Information

Two models available, differing in degree of input voltage regulation. Both models include twelve 7-144-15 Test Tubes (12.7mm); one 7-144-23 Adapter; instruction manual, dust cover. Dimensions, 42Lx33Wx21cmH. Shp wt, 10.9kg (24 lb).

Regulated Model Spectronic 20 Spectrophotometer. With voltage regulation system to compensate for even severe fluctuations in voltage. Rapid warm-up (5min). Easily adjustable voltage output for external readout devices. Switch settings for 100, 115, 220, 240V; 50 or 60Hz.

7-143-1595.00
(BL 33-31-72)

Standard Model Spectronic 20 Spectrophotometer. With transformer condenser system to compensate for minor voltage fluctuations. 15min warm-up. Without voltage output. 115V 60Hz.

7-143525.00
(BL 33-31-71)

Constant Voltage Transformer. Needed for Standard Model Spectronic 20 to compensate for line voltage fluctuations greater than 4V. For 115V 60Hz.

B&L Model DR-37 Digital Readout. Connects directly to 7-143-1 Regulated Model Spectronic 20 to give spectrophotometer readings in large illuminated digits. Requires 7-143-11 Patch Cord. See p 1084.

Recordall® Recorder. Full 250mm chart traces of output from 7-143-1 Regulated Model Spectronic 20. See 13-939-14 on p 1008.

Recorder Patch Cord. Connects Regulated Model Spectronic 20 to Recordall.

7-144-669.20
(BL 33-26-74)

7-144-30

Reflectance Accessory

Accurate color matching without judgment errors

Self-contained unit fits sample well of Spectronic 20; contains white-coated integrating sphere and photomultiplier. Spot of light (chosen wavelength) focused on sample; reflected light added up by integrating sphere; converted to % reflectance by photomultiplier. Specially designed Trichromatic Chart allows quick, simple conversion of readings to world standard C.I.E. trichromatic values.

Gives extremely accurate readings for paints, textiles, plastics, inks, dyes, glass, tiles, many other products. Handles any size sample.

Ordering Information: With pad of charts, magnesium carbonate block, instructions, power supply. 115V 50/60Hz.

7-144-30760.00
(BL 33-29-44-01)

Micro Cell Assembly

Fits into sample well of Spectronic 20. Fused silica micro cells require only 0.1ml sample. Extremely low stray light over 385-950nm range. With adapter, holder, pair of micro cells.

7-144-55147.75
(BL 33-29-14-01)

Micro Cell Holder.

Flow-Thru Accessory

Great time-saver for repetitive testing

Especially convenient for labs with many samples to run. Simply insert probe in sample. Press button on cuvet holder. Sample is drawn into microcell. After reading, depress button further to empty sample into waste storage jar.

Ordering Information: Includes cuvet holder (holds 0.2ml micro cell 7-144-60 in optical path); vacuum pump and waste jar; tantalum probe for withdrawing sample from container.

7-144-52557.85
(BL 33-29-77-17)

Spectronic® mini 20 Spectrophotometer

Accurate, completely portable
Perfect for ecological and wastewater testing

Bausch & Lomb Spectronic mini 20 is world's smallest grating spectrophotometer. It has same type of high-quality diffraction grating and monochromator as world-famous Spectronic 20 and gives comparable results (see table).

Since Spectronic mini 20 is battery-operated (on 4 rechargeable Ni-Cad cells), you can use it to make quick accurate analyses anywhere. AC battery charger comes with it, brings batteries back to full charge overnight. Or you can buy 12VDC charger that plugs into cigarette lighter on your car.

Sample compartment has adapters and covers for 12.7mm light-path flat-bottom vials, standard 12.7mm test tubes, 10mm square cuvettes, and 25mm long path cells for low concentration work.

Meter reads 0-100%T — and you get absorbance overlay, plus blank overlay you can calibrate to read in any concentration units you want.

Ordering Information: In carrying case, with lanyard; 4 rechargeable nickel-cadmium batteries; battery charger for 115V 50/60Hz; sample compartment adapter and insert for 12.7mm path-length vials and test tubes; light shield for 12.7mm test tubes; eight 12.7mm flat-bottom vials with covers; two 25mm long-path cells; adapter, insert and cover for 10mm cuvettes; absorbance scale overlay; blank scale overlay; parts box; and instruction manual.

14-377-10 Model UV-D with 14-377-12
General Purpose Sample Compartment Accessory

Spectronic® 21 Series Spectrophotometers

Choose from 3 models:

Model UV-D — UV-visible range, 200-1000nm, with digital readout

Model UV-M — UV-visible range, 200-1000nm, with meter readout

Model DV — visible range, 340-1000nm, with digital readout

Bausch & Lomb single-beam, grating spectrophotometers combine simplicity of operation with stable, precision performance at moderate cost. Spectral slitwidth of 10nm provides high resolution throughout the continuous wavelength range.

Great for stat enzyme determinations and other clinical testing, food technology, veterinary science, water analysis, environmental studies, drug abuse detection, process control, quality control.

Digital models provide easy-to-read linear readout of absorbance (.000 to 2.000), transmittance (00.0 to 100.0%), or concentration (000 to 2000) as absorbance multiplied by a continuously adjustable expansion factor. Over- and under-range indicators.

Factor Set feature provides pushbutton retrieval of numerical factor that was used to convert absorbance to concentration units. This allows a check on deterioration of reagents, reproducibility of standard curve, and instrument setup technique. An indispensable aid for day-to-day quality control.

Sensitivity control on front of digi-

tal models allows 3-step adjustment to obtain optimal signal with low or high absorbance samples.

Meter model displays linear transmittance (0-100%) or non-linear absorbance (0-2) on 14cm mirrored scale.

Solid-state, chopper-modulated measurement system maintains zero T automatically. Excellent stability: better than 0.5%T per hour. Low noise: <0.1% near 100%T, <0.001A near 0.00A, <0.002A near 1.00A. Practically no drift: <0.1%T per day. Plug-in boards for easy servicing.

Prefocused tungsten lamp covers visible model range of 340 to 1000nm. UV-visible models have dual light source with prefocused deuterium lamp covering 200 to 360nm range, in addition to tungsten lamp. Selector lever positions the desired source. Required power supply is contained in the compact dual source housing, styled integrally with the instrument.

(Contd. on next page.)

Spectronic® 21, Contd.

Single, solid-state photodetector covers entire range in all models. Second order and stray light filters are inserted automatically.

All models deliver analog signal for recording. (Models DV and UV-D require 14-377-16 Converter to produce analog output for absorbance and concentration measurements.) Digital models also provide BCD output which can be connected by 14-377-14 Interface Accessory to 14-385-300 Data Processor for digital recording of results (see p 1087).

Universal test tube/cuvet holder supplied as standard equipment takes cuvettes 88mm long, either test tubes 10 to 25mm dia or rectangular 10mm cells.

Ordering Information: All models include universal test tube/cuvet holder, 12 test tubes with 10mm

light path, spare tungsten lamp, dust cover, instruction manual. 100/115/220/240V 50/60Hz.

 (BL 33-22-01)

For complete specifications, see p 1060.

14-377-10 Model UV-D with 14-377-12 General Purpose Sample Compartment Accessory

Accessories:

General Purpose Sample Compartment. Extends sampling versatility of Spectronic 21. Attaches onto end of instrument (at left in illustration). Large, hinged cover provides excellent access. Compartment contains lens system and lever-operated multiple sample holder for 3 rectangular 10mm light-path cells or 2 cylindrical cells up to 100mm. Also accommodates 14-377-271 Thermo-Regulated Cuvet Holder or 14-377-27 Semi-Micro/Flow-Thru Cuvet Holder. Without cells.

Requires optical rail assembly 14-377-18 or -20 for installation in spectrophotometer.

14-377-12275.00
 (BL 33-22-30)

Optical Rail Assembly. For Models UV-M, UV-D.

B&L Spectronic® 70 Spectrophotometer

Uninterrupted 325-925nm range with automatic phototube and filter change

Extreme simplicity of operation. Just 2 controls . . . wavelength selector and 100%T knob. Instrument automatically sets 0%T and switches phototubes and filters as required by wavelength setting. Digital counter shows wavelength from 325 to 925nm. Spectral slit-width constant at 8nm. Meter is well damped, 20cm wide for good readability. Range 0-100% transmittance, 0-2.0 absorbance (linear).

Choose accessory sample compartment from next page for broad range of cell sizes from micro to 100mm path length for trace analysis. Compartment or door is required and must be purchased separately.

Ordering Information: Includes 14-385-231 Universal Test Tube

Holder (precisely centers any 10-20mm tube), 12 tubes with 10mm path length, spare 14-377-290 Tungsten Lamp, dust cover, instruction manual. Shp wt, 16kg (35 lb). 100/115/220/240V 50/60Hz. Specify 14-377-269 Single Sample Compartment, 14-377-267 Multiple Sample Compartment, or 14-377-268 Sample Compartment Door (described next page).

14-377-255945.00

14-377-2573.00
(BL 333041-10001)

14-377-255 with 14-377-268 Sample Compartment Door

Spectronic® 88 Spectrophotometer

Direct-reading in concentration, linear A, T

Wide 20cm meter gives linear readings of absorbance, transmittance, or concentration. Absorbance is in 2 ranges, 0.0 to 1.0 and 1.0 to 2.0, providing effective 40cm scale length for excellent readability.

Simple concentration mode procedure: set a blank, run a standard, dial in its concentration, then read sample concentrations directly from meter. No calculations, no curves to construct. Reduces errors.

Wavelength range continuous from 325 to 925nm. Setting shown on digital counter. Spectral slit-width constant at 8nm. Instrument automatically switches phototubes and filters as required by wavelength setting.

Choose accessory sample compartment from next page for broad range of cell sizes, automatic cell positioning, or flow-through system permitting up to 300 samples per hour. Compartment or door is required and must be purchased separately.

Ordering Information: Includes 14-385-231 Universal Test Tube Holder (precisely centers any

10-20mm tube), 12 tubes with 10mm path length, spare 14-377-290 Tungsten Lamp, dust cover, instruction manual. Shp wt, 16kg (35 lb). 100/115/220/240V 50/60Hz. Specify sample compartment desired (described next page); use of test tubes requires 14-377-269 Single Sample Compartment, 14-377-267 Multiple Sample Compartment, or 14-377-268 Door.

Thermo-Regulated Cuvet Holder

Takes 3 standard 10mm light-path square cells in 14-377-267 Sample Compartment. Water-jacketed for control at temperatures from 5° to 55°C.

14-377-271135.00
(BL 33-30-14)

Automatic Cell Positioner

For sequencing 2, 3, or 4 cuvetts (10mm rectangular) in light beam, for kinetic reaction and end-point studies. Switches select dwell and cycle times. Dwell time settable 5-60 sec in 7 steps, or for continuous measurement. Cycle repeatable every 5 or 10 min or continuously. Cell advance also operable by manual switch. Indicator lights show cell number. Cell holder jacketed to allow temperature regulation. Motor-driven. Plug-in installation.

Not usable with Spectronic 70.
14-385-5251182.00
(BL 33-30-97)

Micro Flow-Thru Sample Compartment

Stationary flow cell with 10mm light-path length lets you run 5 samples per minute. Avoids need for matched cells. Sample is aspirated into and purged from the system by pressing the intake spout. Automatic interlock prevents introduction of next sample until the previous sample has been purged. Status lights tell you at a glance whether instrument is ready for new sample. Adjustable intake and purging intervals compensate for varying sample viscosities. Determinations can be made with as little as 0.5ml of sample. Cell construction and

Kel-F surfaces eliminate bubbles and free the system from this potential source of error. With thermo-jacketed flow cell, waste system, tubing, connectors, instructions. Without pump.

B&L Spectronic® 100 Spectrophotometer

- Digital readout in A, T, or concentration
- Expandable to Spectronic® 400 Analytical System with printout and automatic sample-handling options (see pp 1085-1087)

Versatile, highly reliable medium-priced grating spectrophotometer with 4-place digital readout. Range 325 to 925nm. Outstanding stability makes this model ideal for kinetic analyses or measuring small concentration differences.

Optical system uses prealigned tungsten lamp assembly, off-axis monochromator with B&L 1200 grooves/mm precision grating blazed at 300nm, and blue- and red-sensitive phototubes. Second-order filter for red-sensitive tube and stray-light UV filter are inserted automatically as required by wavelength settings.

Four-place digital readout shows readings in three switch-selected modes: 000.0 to 100.0%T, 0.000 to 2.000A, and 0000 to 1999 concentration units. Placement of readout decimal and 3X expansion make instrument direct-reading in whatever concentration units you select for calibration.

All solid-state integrated circuits. Stability: better than 0.2%T per hr.

better than 0.001A per hr. Drift: <0.2%T per day. Noise: <0.1%T; <0.001A near 0.000A; <0.003A near 1.000A; <0.006A near 2.000A. With both BCD output for DP-110 Data Processor and 0 to 2.0VDC recorder output.

Bausch & Lomb has made Spectronic 100 as error-free as possible. There are only four controls: wavelength setting; 100%T adjustment; readout mode selector; and concentration calibration knob.

Flashing light tells you when reading is above or below instrument range. Built-in test system checks proper performance.

Choose accessory sample compartment from preceding page to accommodate a great variety of cells and provide flow-through capability or automatic sequencing of cells. Compartment or door is required and must be purchased separately.

Ordering Information: Includes 14-385-231 Universal Test Tube Holder (for any 10-20mm tube), 12 tubes with 10mm path length, spare tungsten lamp, dust cover, instructions. Wt, 17.2kg. 120V 50/60Hz. Specify sample compartment desired (see preceding page); use of test tubes requires 14-377-269 Single Sample Compartment, 14-377-267 Multiple Sample Compartment, or 14-377-268 Door.

B&L Spectronic® 710 Spectrophotometer

Digital readout in A, T, or concentration

Uninterrupted 200-1000nm range

Expandable to Spectronic® 400-UV Analytical System with printout and automatic sample-handling options (see pp 1085-1087)

Precision single-beam instrument with outstanding performance and versatility. Large, easy-to-read digital display from 000.0 to 100.0%T, 0.000 to 2.000A (linear), or 0000 to 2000 in concentration units. Over- and under-range indicators. Resolution 2.0nm throughout range. High stability, negligible drift. Excellent for column monitoring.

Factor Set feature provides pushbutton retrieval of numerical factor that was used to convert absorbance to concentration units. This allows a check on deterioration of reagents, reproducibility of standard curve, and instrument setup technique. An indispensable aid for day-to-day quality control.

Continuous range from 200 to 1000nm is covered by deuterium and tungsten lamps with built-in power supplies. Blue and red-sensitive photodetectors and filters are changed automatically as required by wavelength setting. High resolution Czerny-Turner monochromator uses grating with 1200 grooves/mm, blazed at

300nm. Stray light is less than 0.5% at 220nm.

Drift less than 0.1%T per day. Stability better than 0.001A/hr near 0A. Noise: <0.001A near 0A, <0.002A near 1A, <0.004A near 1.5A. High sensitivity switch provides 3X gain for optically dense samples or restricted aperture cells.

BCD output allows direct tie-in with DP-110 Data Processor for assembly of modular Spectronic 400-UV automatic analysis printout systems; see pp 1086-1087. Analog output for recorder is provided by means of BL 34-40-34 Converter, available on special order.

Choose accessory sample compartment from p 1080 to accommodate a great variety of cells and provide flow-through capability or automatic sequencing of cells. Compartment, or test tube holder and door, must be purchased separately to complete the spectrophotometer.

Ordering Information: With spare tungsten lamp, dust cover,

instruction manual. Wt, 29kg. 120V 50/60Hz. Sample compartment not included; select one from p 1080.

14-385-250 with 14-377-265 Flow-Thru Sample Compartment (p 1081)

Spectronic® 700 Spectrophotometer

- Uninterrupted 200-950nm range
- Linear readout in A, T, or concentration

A single-beam, UV-visible range instrument with 20cm meter. Provides linear readings in %T, two absorbance and two concentration modes. Full-scale range in absorbance mode is switch-selected at 0.00 to 1.00A or 1.00 to 2.00A. In effect, you have 40cm absorbance scale.

In concentration 0-MAX mode, you read concentration directly in whatever units you use to calibrate. In C MIN-MAX mode, you use two non-zero standards to set concentration values at ends of scale. This spreads concentration difference over full span. Expanded readout capability for absorbance and concentration is valuable for quality control and product testing applications.

Continuous 200-950nm range is covered by deuterium and tungsten lamps with built-in power supplies. Blue and red-sensitive photodetectors and filters are changed automatically as required by wavelength setting. High resolution of 2nm throughout range is supplied by same precision monochromator used in Spectronic 710 (preceding page).

Exceptionally low drift of 0.0015A/hr. High sensitivity switch provides 3X gain for optically dense samples or restricted aperture

cells. Rear panel switch allows rapid calibration check.

Analog output of 0 to 1V permits use with recorder. Model DR-37 Digital Readout Accessory (see following) converts the analog signal to a 4-digit display plus BCD output.

Choose accessory sample compartment from p 1080 to accommodate a variety of cells and provide flow-through capability or automatic sequencing of cells. Compartment, or test tube holder and door, must be purchased separately to complete the spectrophotometer.

Ordering Information: With spare tungsten lamp, dust cover, instruction manual. Wt, 25 kg. 120V 50/60Hz. Sample compartment not included; select one from pp 1080-1081.

14-385-2502730.00
(BL 34-40-01)

For complete specifications, see p 1060
Accessories and parts are listed on p 1083

7-143-10

B&L Model DR-37 Digital Readout

For any spectrophotometer with a nominal 1V analog output

Ideal for use with B&L Spectronic 20 (Regulated Model), 70, 88, or 700.

Four-place digital display has large, unbroken 7-segment digits and movable decimal point. Plus and minus indicator lights assure accurate zero readings. If a reading is over-range, digits flash to warn you. BCD output on back panel.

Accuracy: $\pm 0.1\%$ of reading or $\pm 0.05\%$ of full scale. Conversion rate of 5/sec. Easily installed with simple patch-cord connection (listed below). 115V 50/60Hz.

7-143-10395.00
(BL 33-30-92)

Patch Cord. For connecting 7-143-10 Digital Readout to spectrophotometers. Not necessary for Spectronic 700.

7-143-1110.80
(BL 33-26-71)

Bausch & Lomb Spectronic® 400 Analytical Systems

Spectronic 400-4 System

Tailored to fit your testing needs and your budget

Any Fisher branch will help you match an analytical system to your special analytical and budgetary requirements.

You can often use equipment you already have, such as vacuum pumps and constant-temperature circulating baths. Semi-automatic Spectronic 400-2 systems can involve as little as spectrophotometer and data processor. Or you can have a fully automated, programmable system that analyzes up to 80 samples in sequence (400-4 system).

Spectronic 400 systems are built around two moderate-priced B&L grating spectrophotometers. The Spectronic 100 described on page 1082 covers near-ultraviolet and visible spectrum (334 to 850nm). It has digital readout in %T, absorbance, or concentration and binary coded decimal (BCD) output so it can be interfaced with Model DP-110 Data Processor.

The Spectronic 710 (page 1083) has wavelength range extending farther into ultraviolet (220 to 850nm). It has 4-place digital readout in %T, absorbance and concentration which provides BCD output for DP-110 Data Processor.

Systems use flow-thru mic-

rocvet sample compartments that let you make accurate determinations with only 0.5ml of sample.

You can also use conventional round, square, and cylindrical cells in both spectrophotometers by ordering different sample compartments. (See pp 1080-1081).

Spectronic 400 systems eliminate many errors that can occur in conventional series analyses. They also release personnel for other work.

Once you establish optimum instrument settings, every sample is analyzed by identical procedure. Technique doesn't change when operators do, or when they grow tired.

There is no cross-contamination from sample to sample. Aspirating capillary ("dipper") is cleaned by vacuum scrubber before each sample is taken. Even with semi-automatically operated Spectronic 400-2 systems, you cannot aspirate new sample until previous one has drained and cell is purged.

Automatic data printout makes accurate permanent record of every measurement. No transcription errors. Sample number is printed with every reading.

Spectronic 400-2 Systems

There are two Spectronic 400-2 systems with standard micro flow-thru sample compartments. As shown in table, next page, one incorporates the Spectronic 100. The other, a Spectronic 710.

These are simplest and lowest-priced of Spectronic 400 systems. Each requires a vacuum source (pump or house vacuum line regulated to 38cm of mercury), and a DP-110 Data Processor with connecting cable.

You introduce samples manually. There is only one lever to press. You dip intake spout ("dipper") in sample and push up on spout. System automatically aspirates enough sample to fill cuvet. Holds it for pre-set stabilization time. Measures absorbance at selected wavelength. Purges cuvet. And prints result.

Digital readout shows reading in %T, absorbance, or in whatever concentration units you select. Data Processor prints reading on tape. It will also calculate and print difference in absorbance (ΔA) between sample and reference, or enzyme activity (IU) units

Spectronic 400-3 Systems

The two Spectronic 400-3 systems (see table next page) are completely automated except for preparing samples. They are made up by adding 14-385-304 Automatic Sampler to Spectronic 400-2.

Sampler holds 80 tubes in racks, with 10 numbered samples and standards in each rack. Constant-temperature bath holds samples at selected temperature (5° to 55°C).

Using controls on Data Processor, you can program system to aspirate each sample in succession, hold it in cell long enough for temperature to stabilize, and read and print out absorbance or concentration before it purges cell and takes next sample.

You can also use Spectronic 400-3 systems to perform kinetic enzyme analyses automatically, by programming them to make and print up to 15 successive absorbance readings at regular intervals over preset length of time.

The sample number precedes the value which is printed out in both absorbance and concentration.

Spectronic 400-4 Systems

The two Spectronic 400-4 systems (see table next page) are completely automatic. They can handle kinetic enzyme analyses and clinical endpoint determinations, as well as many quality control procedures. (See table on p 1087.) You can make up to 180 kinetic analyses or 360 endpoint determinations in an hour.

These systems add a 14-385-305 Automatic Diluter-Pipetter to components of Spectronic 400-3 systems, as shown in table. Using Pipetter hand-probe, you push button once to take precisely metered volume of sample . . . press again to dilute it with metered volume of reagent from syringe and dispense it into sample tube. System will add another reagent, if necessary, mix them thoroughly, incubate for whatever length of time you have programmed, and transfer sample to flow-cell for reading and print-out.

System components are outlined on next page . . .

(Contd. from preceding page:)

6 B&L Spectronic® 400 Systems Offered . . .

400-2 system (above) provides:

- Semi-automatic uptake of samples from tubes presented manually.
- Printout of %T, A, concentration, ΔA , or enzyme activity (IU).

400-2UV system, same except with far-UV range.

400-3 system (above) provides:

- Automatic uptake of up to 80 prepared, racked samples.
- Automatic kinetic enzyme analysis.
- Printout of %T, A, concentration, ΔA , or enzyme activity (IU).

400-3UV system, same except with far-UV range.

400-4 system (above) provides:

- Completely automatic kinetic enzyme analyses (180/hr), clinical endpoint determinations (360/hr), QC procedures.
- Automatic Diluter-Pipetter for sample preparation, with thorough mixing.
- Printout of results.

400-4UV system, same except with far-UV range.

Ordering Information: To order any one of the Spectronic 400 systems, please specify the catalog numbers of all components needed.

COMPONENT AND CAT. NO.	FUNCTION/FEATURES	SPECTRONIC 400 SYSTEMS (Components as shaded below.)					
		400-2	400-2UV	400-3	400-3UV	400-4	400-4UV
A Spectronic 100 Spectrophotometer 14-385-200 (p 1082)	334-850nm range. 8nm slitwidth. Four-digit readout of %T, A, or concentration. BCD output for printer.						
Spectronic 710 Spectrophotometer 14-385-255 (p 1083)	220-850nm range. 2nm slitwidth. Four-digit readout of %T, A, or concentration. BCD output for printer.						
B Micro Flow-Thru Sample Compartment 14-377-265 (p 1081)	Stationary cuvet receives consecutive 0.5ml samples.						
C Data Processor Model DP-110 14-385-300 (p 1087)	Printout of each measurement, with sample number. Computes and prints concentration, differential units, enzyme activity. Program-controller for automated systems (400-3, 400-4).						
Connecting Cable 14-385-301 (p 1087)	Connects Data Processor to spectrophotometer.						
Interconnecting Circuitry 14-385-303 (p 1087)	Connects modules of automated systems (400-3, 400-4).						
Pressure Regulator 14-385-309 (p 1087)	Controls air-jet mixer of Automatic Sampler.						
D Automatic Sampler 14-385-304 (p 1087)	Presents up to 80 racked samples in sequence for automatic aspiration into flow cell.						
E Diluter-Pipetter 14-385-305 (p 1088)	Automatically takes up required sample volume, dilutes it at preset ratio.						
F Syringe Assembly* (p 1088)	For Diluter-Pipetter. Select syringe size according to volume requirements.						
Haake Model FJ Water Circulator 13-874-112 (p 70)	Regulates temperature of Automatic Sampler water bath and water jacket of flow-thru cell.						
Vacuum Pump 14-385-206 (p 1081)	Suction for automatic liquid transfer.					(two needed)	(two needed)
Multiple Outlet Strip 91-437 (p 428)	Consolidates power line connections.						
Disposable Culture Tubes 16x100mm, base of 1000 14-258F (p 534)	Sample containers for Automatic Sampler.						

* At least one of the following Syringe Assemblies is required: 14-385-315, -316, -317, -318, -319 (see p 1088)

Systems Handle All These Methods

Clinical methods manual is supplied with Spectronic 400 systems. Includes for each method background information, bibliography, and step-by-step procedure for Spectronic 400-2 or 400-4 system. Following procedures now available. More to be added in the future.

Clinical Tests

Albumin
Alkaline Phosphatase
Bilirubin
BUN (blood urea nitrogen)
Calcium
Cholesterol
CPK (creatine phosphokinase)
Creatinine
Globulin
Glucose HEX (glucose hexokinase)
Glucose Oxidase
HBD (hydroxybutyrate dehydrogenase)
LDH-L (lactate dehydrogenase L)
LDH-P (lactate dehydrogenase P)
Phosphorus
SGOT (serum glutamic oxalacetic transaminase)
SGPT (serum glutamic pyruvic transaminase)
Sickle Cell Screening
Total Protein
Triglycerides
Uric Acid

Water Technology

Manual of 16 procedures for water and wastewater analysis is applicable to Spectronic 400-2 system. See 15-413 on p 1235. Includes much useful information in addition to the following test methods:

Ammonia	Iron	Nitrite
Chlorine	Lead	Phenol
Copper	Mercury	Phosphorus
Cyanide	Organic	Silica
Fluoride	Nitrogen	Sulfate
	Nitrate	Surfactants

For detailed bulletin on Spectronic 400 systems, check no. 20 on reader service card at end of blue index pages.

Components of Spectronic® 400 Systems

DP-110 Data Processor

Key component of Spectronic 400 analytical systems. In semi-automatically operated Spectronic 400-2 systems, it prints absorbance and/or concentration of each sample introduced by operator. In automated Spectronic 400-3 and 400-4 systems, it programs the analyses.

DP-110 combines pushbutton programmer and laboratory computer/printer. You can use it to print data with BCD output. Or as laboratory calculator.

Programming unit sends time commands to other components of Spectronic 400 system, controlling sequencing, timing, and printout of readings, automatically or on command. You can hold sample for 4, 8, 16, 24, or 32 seconds while it stabilizes, before reading is recorded. When you make time-rate (kinetic) enzyme reaction studies, you can program system to read absorbance at 6 equal intervals in periods of 20, 30, 40, 60, 90, 120, or 180 seconds, or to read every 10 seconds for indefinite time in method development work.

Printing unit prints identification number of each sample with reading. It will print % T, absorbance, or convert absorbance to concentration in whatever units you use to calibrate. It will also compute and print differential units (ΔA or IU/liter international enzyme units) when you operate Spectronic 400 systems in that mode. If reading is over or under instrument range, DP-110 prints -0- with sample number.

You can use keyboard to add date, test temperature, wavelength setting, sample codes, operator number, etc. to printout of analytical data.

Ordering Information: With instructions and methods manual. In

Spectronic 400-3 and 400-4 installations, you need 14-385-303 interconnecting circuitry. In all systems you need 14-385-301 spectrophotometer cable. 115V 50/60Hz.

Automatic Sampler

Holds up to 80 sample tubes in numbered positions (1 to 10) in numbered racks and presents them in sequence, at timed intervals, for sample to be aspirated and read.

You dispense sample and reagent into tubes manually or automatically (with Diluter-Pipetter). Sampler can be programmed to add up to 3.0ml of another reagent. In Spectronic 400-4 systems, compressed air vortex mixes sample and reagents thoroughly.

You can incubate tubes at 5° to 55°C in water bath controlled by constant-temperature circulator. Incubation time is set on Data Processor. Sampler can be program-

med to present samples at rate of 300 per hour, or to make set number of readings of same sample in set length of time before proceeding to next sample. Stops automatically after last sample.

To minimize carry-over, plastic dipper tube is retracted into evacuated sleeve and dried before it enters next sample.

Flow-thru cell is flushed with sample before next reading is made. Carry-over is less than 1% with 1.5ml samples.

Ordering Information: With test tube racks and necessary tubing. 115V 50/60Hz.

14-385-3041890.00

Automatic Diluter-Pipetter

For Spectronic 400-4 Systems

Takes samples and adds diluent from calibrated, adjustable syringes. Samples may be as small as 0.01ml (with micro syringe) or as large as 1.2ml (with macro syringe). Diluent volume may be as large as 3.5ml.

Syringe assemblies are on base plates spring-mounted on Diluter-Pipetter body. Tubing has Luer Lok® connectors.

You take samples with pushbutton-operated hand-probe. Press button to take metered sample, press again to add diluent and dispense into reaction tube. Diluent follows sample and flushes probe, preventing cross-contamination. Status lights show whether probe is sampling or dispensing. Counter shows number of tubes filled.

Ordering Information: With hand probe and tubing. Order syringe assembly separately. 115V 50/60Hz.

New Spectronic® 210 & Spectronic® 200 Double-Beam Spectrophotometers

High resolution, automatic scanning Choice of digital or meter readout

Advanced double-beam optical design and solid-state electronics from two of world's leading instrument-makers are combined in Bausch & Lomb/Shimadzu New Spectronic 210 and Spectronic 200.

These grating spectrophotometers provide research-level performance in easy-to-operate general-purpose instrument. Wavelength settings are accurate to $\pm 0.5\text{nm}$ over 190 to 800nm range of Spectronic 200, and to $\pm 0.3\text{nm}$ over 190 to 900nm range of Spectronic 210. The Spectronic 200 has four slits, selected by lever to give you choice of 0.25, 0.5, 1.0, or 2.0nm slitwidth. The new Spectronic 210 has six slitwidths: 0.1, 0.2, 0.5, 1.0, 2.0, and 5.0nm.

Spectronic 200 has meter reading 0 to 100%T, 0 to 1.00A and 0 to 2.0A (linear). Spectronic 210 has digital display and 6 readout modes for reading from 0 to 10.0% and 0 to 100.0%T; 0 to 0.200, 0 to 2.000, and 0 to 3 absorbance; and in concentration units.

Spectronic 200 has quick-change gears for spectral scanning at 60, 120, 240, or 480nm per minute. An accessory gear permits scanning at 30nm/min. New Spectronic 210 has pushbutton scan-speed selection of 60, 120, 240, and 480nm/min.

The double-beam optical system uses time-sharing optical chopper. Sample and reference beams have same path length. Strike photomultiplier at same point from same angle. A mask reduces beam area for micro-cell applications.

Baseline flatness is better than $\pm 1.0\%$ over entire wavelength range. Spectronic 210 has baseline compensation network of 9 trimpots which permit keeping baseline well within specifications. B&L Certified Precision grating with 1200 grooves per mm, blazed at 200nm. Modified Czerny-Turner mount eliminates coma. Five second-order and stray-light filters, automatically inserted in optical path, hold stray light to less than 0.1%.

All solid-state electronics with integrated circuits and FET technology guarantee long-term stability and maintenance-free operation. High-speed dynode feedback loop instantaneously compensates for fluctuations in line voltage or lamp intensity. Zero and 100%T settings rarely have to be changed.

On Spectronic 210, readings appear on 4-digit display with adjustable decimal. You also have convenience of direct concentration readout (3X scale expansion covers wide conversion range). Display warns of over or under-range readings.

Both models have 100mV full-span analog output for potentiometric recorders. Spectronic 210 has BCD output which permits you to interface it with computers or digital printers.

Large sample compartment accommodates water-jacketed cells and most other photometric cells. You have choice of 5 sample-handling options (see next page) covering a wide range of applications.

Ordering Information: Both models come with tungsten and deuterium lamps, power supply unit, and two spare tungsten lamps; two 10mm square quartz cuvettes; didymium filter; 10%T neutral density filter; shutter block; tool set; fuses; dust cover; instruction manual. Wt, 55kg. 120V 60Hz.

Spectronic 200 Spectrophotometer. Meter readout.

14-385-500 6000.00
(BL 39-20-02)

New Spectronic 210 Spectrophotometer. Digital readout.

14-385-501 7500.00
(BL 39-20-03)

For complete specifications, see
p 1060

Five Sample-Handling Options:

4 Place Turret

With cover. Holds 1 to 4 square 10mm path-length cuvetts in revolving turret, turned by external selector knob. Reference cuvet in fixed position. Without cells.

14-385-514385.00
(BL 39-20-06)

Cylindrical Cell Holder

Takes two cells with path length up to 100mm. Without cells.

14-385-515125.00
(BL 39-20-07)

Constant Temperature Cell Holder

Jacketed holder for two 10mm cuvetts. Use Haake constant-temperature circulator to maintain 5° to 75°C temperature (see pp 70-71).

14-385-516385.00
(BL 39-20-08)

Flow-Thru Cell Accessory

Provides rapid, semi-automatic handling of consecutive samples through stationary, fused-silica flow cell. Air purge control and sample volume adjustment. Minimum sample, 0.8ml. Sample

contacts only silica, Teflon®, polyethylene. Includes flow cell. Requires waste system and vacuum pump (see below).

14-385-5021300.00
(BL 39-20-20)

Waste System. Includes waste jars, valve, tubing. Without pump.

14-385-20560.00
(BL 33-30-09)

Vacuum Pump. For 14-385-205. 120V 60Hz.

14-385-206135.00
(BL 33-30-11)

Reflectance Sphere

Accommodates samples from 16x16mm to 70x70mm for reflectance measurements and color matching. Range, 240 to 800nm. Usable also with 10mm path-length cells for spectral transmittance, absorbance, turbidity, or reflectance studies. Translucent samples, emulsions, and other low-transmission media can be used. Includes integrating sphere, sample compartment cover, magnesium oxide white plates, plates for powder samples, and holders for 10mm cells.

14-385-5121350.00
(BL 39-20-35)

Accessories and Parts

Scanning Gear

Gives scanning rate of 30nm/minute. For Spectronic 200, only.

14-385-51860.00
(BL 39-20-10)

Opal Glass Filter

Gives sharper spectra with translucent samples such as blood or cell suspensions. Flat baseline.

14-385-513250.00
(BL 39-20-05)

Scale Expansion Board

Converts 100mV recorder output to 10mV full-span.

14-385-51722.00
(BL 39-20-09)

Tungsten Lamp

Pre-aligned, in mount.

14-385-5197.50
(BL 39-39-01)

Deuterium Lamp

Pre-aligned, in mount.

14-385-520110.00
(BL 39-39-02)

See next page for recorders recommended for use with Spectronic 200 and 210.

A wide assortment of literature prepared by Fisher's own technical writers keeps you up-to-date on the latest scientific developments, products and techniques in a number of fields. Publications include **Lab Reporter**, of particular interest to industrial laboratories; **Med-Lab Reporter**, for medical, clinical and hospital laboratories; **Environmental Reporter** directed to environmental testing labs; **Biology Reporter** for junior colleges and technical institutes; and **Educational Reporter** for secondary and elementary schools. To place your name on the mailing list for any of these publications, contact your Fisher salesman or your nearest Fisher branch.

Omnigraphic® T-Y Recorder

Perfect for X-Y recording at rapid scanning speeds of Spectronic 200 and 210 spectrophotometers

14-385-505

Houston 4000S modular flat-bed recorder. Y-axis records absorbance, concentration, or %T. X-axis (= "T"-axis) records time. Time drive synchronizes with Spectronic 200 and Spectronic 210 scanning speeds, so 15" (38.1cm) chart covers full 200-900nm range.

Chart speeds of 1.5, 3, 6, and 12" per minute (3.8 to 30.5cm/min) correspond to scanning speeds of 60, 120, 240, and 480nm/min. At these rates, each major division on 14-385-510 chart equals 50nm. Each minor division is 5nm. If you use 60nm/min scan and 12"/min chart speed you will have 5nm/major div and 5Å/minor div.

Omnigraphic recorders use incremental stepping motor controlled by line frequency. You use scale expansion board (14-385-517) to reduce 110mV output of Spectronic 200/210 to 10mV span of recorder. Paper is held by vacuum plate, while pen moves from right (high wavelengths) to left, synchronizing with spectrophotometer scanner.

By using 14-385-509 remote patch cord set to connect Spectronic 200 or 210 to recorder, you can control recorder from scan switch on spectrophotometer. Pen is automatically lowered when you start scan and raised when scan ends. Or if you interrupt scan, it will not lose its synchronization. At end of scan, it returns to starting point.

Ordering Information

Omnigraphic T-Y Recorder with X (wavelength) module, but without Y-axis module. Order Type 1 or Type 12 module separately. Recorder comes with 10 pens; 10 sheets of chart paper; dust cover; and instructions. 115V 60Hz.

14-385-5051283.00
(BL 39-03-57)

Type 1 Y-Axis Module. Fixed 10mV input with 110% zero adjust. With this module you can extend Spectronic 200/210 range to 4.0A and use it as differential spectrophotometer, shifting ranges with zero adjust. Requires regular 14-385-508 and 14-385-509 patch cord sets.

14-385-50680.00
(BL 39-03-58)

Type 12 Y-Axis Module. Variable-input module with 14 full scale ranges from 10mV to 200V. Used with Spectronic 200/210 spectrophotometer, 10, 20, 50, 100, 200, and 500mV ranges give 1, 2, 5, 10, 20, and 50mV/inch on chart.

Module has 110% zero adjust and 1V of offset, with coarse and fine controls. Requires 14-385-508 and 14-385-509 patch cord sets

Fisher Recordall® 13-939-14 (see p 1008) is ideal for charting absorbance changes with B&L Spectrophotometers

Coleman Model 295 Spectrophotometer

14-376-290

Low-priced, versatile
Ideal for screening, student use, routine analyses

Grating spectrophotometer that's rugged, reliable, easy to use. Excellent for rapid screening tests in industrial pollution control or clinical labs. Accommodates all Coleman macro and micro cuvettes ... also Vacuette™ rapid sampling cell.

It's fast ... less than 2sec full-scale. Precise ... wavelengths accurate to $\pm 0.5\text{nm}$. Reproducible ... to $\pm 0.5\%T$. Easy to read ... to $\pm 0.2\%T$ on 14cm meter: 0 to 100%T (linear) and 0 to 2.0A (logarithmic).

Compact, unitized construction with solid-state circuitry. Lenses and diffraction grating built into optical bench, which also supports slit, cuvet well, and photocell. Integral, removable transistorized power supply. Frictionless, taut-band meter. All parts are readily accessible.

Ordering Information: In vinyl-coated steel housing. With plastic light shield; dust cover; removable, thermo-formed plastic cover; instructions. 110/220V 50/60Hz.

14-376-290437.00

Model 295 Specifications

Wavelength Range	400 to 700nm
Band Width	20nm
Wavelength Calibration	$\pm 1\text{nm}$ at 585nm
Wavelength Reproducibility	$\pm 0.5\text{nm}$
Photometric Reproducibility	$\pm 0.5\%T$
Sample Range	0.1 to 12.0ml
Readout	14cm wide meter scale 0 to 100%T & 0 to 2.0A
Scale Range	

Coleman Junior® II Spectrophotometer

14-376-205

Perfect routine workhorse
Accurate galvanometer readout
Choice of 20nm or 35nm bandpass

Low-cost, simple to operate, easy reading, fast response, 325 to 825nm range ... the perfect routine workhorse instrument. The photometric accuracy and repeatability necessary for day-in/day-out industrial control and clinical testing, including new enzyme determinations and other new methods in 325-400nm range.

Big, bright galvanometer readout visible at a glance. Scale positioned and shielded for maximum visibility, instant reading. Locks in on reading in 2sec. Free of flutter. Precise. Positive readout.

With integral transistorized power supply, there's just one compact unit on lab bench.

Operate Junior® II with same calibration tables, charts, procedures from older Junior models. Use it too with Coleman Junior ac-

cessories — Model 21 Flame Photometer, Model 12C Electronic Photofluorometer, Autofill, and Vacuette assemblies (p 1093). Cuvets and adapters available for samples from 0.007 to 12ml; optical path lengths from 1-23mm.

Ordering Information: Two models identical except for bandpass. Both include plastic light shield, transmittance/absorbance scale panel, instrument cover, instructions. Shp wt, 15kg (33 lb). 115/230V 50/60Hz.

Model 6/20: 20nm bandpass.
14-376-200852.00

Model 6/35: 35nm bandpass.
14-376-205852.00

For complete specifications, see p 1060.

Coleman Junior[®] IIA Spectrophotometer

- Galvanometer readout, linear absorbance and %T
- Blank scale insert for easy calibration to read directly in concentration

Built-in electronic converter provides direct linear readout in absorbance and transmittance. To read concentration directly, just snap in blank scale panel over readout window. Adjust instrument for 0 absorbance and calibrate the panel, using samples of known concentration. Insert unknown samples and read linear concentration direct from scale. No log scales or charts. No reading or conversion errors. Calibrate any number of blank panels to accommodate frequent analyses.

Even difficult high absorbance, high concentration ranges are easy to read. No crowding of calibrations.

Uses same accessories and cuvetts (micro and macro) as Junior II.

Ordering Information: With plastic light shield, calibrated scale panel (linear A & T), blank linear scale panel, instrument cover, instructions. Shp wt, 15kg (33 lb). 120/240V 50/60Hz.

14-376-250947.00

Linear Absorbance Scale Panel.

14-376-2548.20
(Coleman 6-412)

Blank Scale Panel.

14-376-2526.90
(Coleman 6-410)

14-376-250

Coleman Model 44 Spectrophotometer

**Taut-band meter readout
Linear A and %T**

Ideal for wide range of industrial control and research applications, also for educational laboratories.

Big, bright 18cm wide meter; linear scale; no crowding. 325-825nm range. Goes from 0-100%T in less than 2 sec. Integral transistorized power supply.

Also uses standard Coleman Junior II cuvetts and accessories.

Ordering Information: With plastic light shield; meter scale calibrated in transmittance/absorbance; instrument cover; instructions. Shp wt, 15kg (33 lb). 120/240V 50/60Hz

14-376-280 947.00

(Coleman 6-501)

14-376-168
Shown with Junior Spectrophotometer

14-376-300

Coleman Model 54B Spectrophotometer

BCD output for connection to printer or data processor

Digital display readable from any angle. Three modes: direct linear concentration; linear absorbance (0-2A); transmittance (0-100%). And you can plug in a recorder or printer. 330-835nm wavelength range.

Stability better than 0.002A per 60min at zero A. Photometric linearity better than 0.5%.

Uses same cuvetts and adapters (square, round, macro, micro) as Coleman Junior Spectrophotometers.

Ordering Information: With plastic light shield, instrument cover, instructions. 115/230V 50/60Hz.

14-376-3001894.00

Complete specifications on p 1061.

With accessories, Model 54B performs semi-automatic sampling

By adding a system controller, micro flow cell, and vacuum pump (see below), sampling becomes a simple one-hand operation. Hold sample container under intake tube; tap bar to start cycle. Sample is aspirated into temperature-controlled flow cell. Data is digitally displayed on Model 54B. Variable sample volume and vacuum compensate for differences in viscosity.

Controller will operate an accessory printer for permanent record of spectrophotometer readings. Sampling system consists of the following 3 parts; order each separately

System Controller

Regulates aspiration and accessory printer. Sampling time 0.5-1.0sec. Sample vol: 0.75 to 7.5ml. Print delay: 3, 10, 30, or 60sec. With cell holder, vacuum adjust, gauge, reservoir. 115/230V 50/60Hz.

14-376-302947.00

(Coleman 5-102)

Micro Flow Cell

Temperature-controlled. Glass; 10mm light path; 250 μ l. Range: 25-40°C \pm 0.1°C.

14-376-304164.00

(Coleman 5-103)

Vacuum Pump

Up to 51cm Hg. 115V 50/60Hz.

14-376-306108.00

(Coleman 5-104)

Optional . . .

Micro Flow Cell

Not temperature-controlled. 10mm light path; 250 μ l; glass.

14-376-308158.00

(Coleman 6-774)

Coleman Strip Chart Recorder. See 13-940-990 on p 1010.

BCD Printer. See 14-385-113 on p 1098. Requires 14-385-112R Adapter Kit

Coleman Model 55 Spectrophotometer

Excellent stability for process monitoring and quality control

14-384

High performance, single-beam, grating spectrophotometer at a moderate price. Ideal for analytical, quality, and production control. Operates from 300 to 800nm. Or, with 14-384-1 UV Accessory, from 190 to 800nm.

Data displayed digitally in transmittance (0 to 100%T), absorbance (0 to 3A), or linear concentration (0.1 to 10X). Four-place digital readout provides data in less than 1 second for 98% of final value.

High-intensity light source, overcoated optical elements, sensitive detector. High optical energy focused to small 0.3x1mm image. Ensures high signal-to-noise ratio.

Less than 0.005A drift over 8-hr period. Excellent for liquid column monitoring and overnight automatic sampling.

Recorder output: 50mV/100%T. BCD output: buffered, T²L compatible, (+) true logic.

Ordering Information: With standard cell holder, 14-385-10 tungsten lamp, instrument cover, and operating directions. Dimensions, 42Lx58Wx17cmH. Without cells or cuvetts. Shipping wt, 25kg (55 lb). 115/230V 50/60Hz.

14-3843219.00

Model 55 Specifications

Wavelength Range	300 to 800nm
Bandpass	2nm

Model 55 Accessories

UV Accessory

Increases wavelength range of Model 55 from 300-800nm to 190-800nm. With deuterium source, power supply, lamp mount, and source-selector control. 115/230V 50/60Hz.

14-384-1620.00
(Coleman 55-204)

Cylindrical Cell Holder

Holds cylindrical cells with external diameters of 22 to 30mm and lengths from 1 to 100mm. Aperture provided permits use of water-jacketed cylindrical cells for temperature control of sample.

14-384-4126.00
(Coleman 55-303)

Test Tube Holder

For conventional test tube with diameters, 10 to 19mm; heights, 75 to 100mm. Self-aligns test tubes in X-Y planes as inserted.

14-384-596.00
(Coleman 55-305)

Universal Cell Compartment Cover

For use with 14-384-5 test tube holder. Use in place of standard cell compartment cover. Install without tools.

14-384-683.50
(Coleman 55-311)

Auto-Sampler

For semi-automatic spectrophotometry. Coupled with Model 55, Auto-Sampler provides excellent system for rapid sampling. Mount Auto-Sampler on spectrophotometer. Aspirate sample into flow cell for measurement. Within seconds, data is displayed and ready for recording or printing. Push purge switch to discharge sample into waste bottle after measurement. With vacuum and waste bottle system, manual control unit, tubing, filter kit, and beam-reducing aperture.

14-384-7693.00
(Coleman 55-200)

Convenience Tray

Collects accidental spills from materials being tested.

14-384-810.40
(Coleman 55-700)

Sample Compartment Window Kit

Silica windows to seal sample compartment when working with fuming or volatile materials.

(Coleman 55-505)

Automatic Enzyme System

A complete modular system, using Coleman Model 55 Spectrophotometer and 14-384-15 Dispenser-Programmer, can be supplied to allow unattended analysis of 20 samples.

System performs, in one hour, up to 45 typical kinetic enzyme assays with 2 printouts per sample, up to 60 with single printout, or up to 96 colorimetric tests. Enzyme activities are printed out directly in International Units or other units of choice.

Literature describing components of this and other automatic and semi-automatic systems can be furnished on request. Check no. 13 on reader service card at end of blue index pages for your copy.

Dispenser-Programmer System for Automatic Kinetic Enzyme Assay

For use with Coleman Model 55 Spectrophotometer

A programmed reagent-dispenser and 20-cup turntable. Automates kinetic enzyme determinations or routine colorimetric analyses when used in conjunction with other required cycle-programming, sample flow-through, and printout equipment.

Automatically adds reagent to preloaded sample cups in a removable turntable rack. Holds 20 disposable polystyrene cups size 1.8 or 3.5ml. Introduces time delay of 30 seconds or more before sample pick-up by ancillary equipment. Accommodates lag phase. Extends system cycle to maximum of 7½ minutes.

Dispenses 0.5 to 5.0ml per sample, settable in increments of 0.025ml. Dispensing precision, $\pm 0.5\%$; accuracy, $\pm 0.05\text{ml}$. 115/230V 50/60Hz.

14-384-152061.00
(Coleman 5-275)

Extra Dispenser

For 14-384-15 Dispenser-Programmer. Plug-in assembly, with reservoir. Facilitates rapid reagent changeover. Will fit into refrigerator.

14-384-16172.00
(Coleman 5-276)

Support Table

For use with 14-384-15 Dispenser-Programmer to support turntable assembly in front of Model 55 Spectrophotometer. Needed only if bench depth is less than 69cm. Attaches beneath Model 55.

14-384-1711.50
(Coleman 55-705)

14-384-15

14-377-200

Turner Models 330 and 350 Spectrophotometers

Narrow 9nm bandwidth

Exceptional performance at low cost

Low stray light (0.5% anywhere in range) and narrow 9nm bandwidth exceptional for low-priced instrument. Wavelength easily dialed; read in digits on counter. 335-710nm range. Calibration easily maintained. Instructions provided for simple check of calibration, resolution, and stray light without using expensive accessory.

Meter has linear 0-100% transmittance scale and non-linear 0-2.0 absorbance scale.

Ordering Information: The two models differ in meter size. Model 350 has longer scale and provides slightly greater photometric accuracy. Both models have 0-1V output for recorder and include tungsten lamp, wide-range photodiode, cuvet holder for 13x100mm round cuvetts, 3 blocking filters, instructions. 100-130V 48-65Hz

Model 350 Spectrophotometer.

Scale length 18cm. Shp wt, 10.4kg

14-377-220850.00

Model 330 Spectrophotometer.

Scale length 10cm. Shp wt, 8.2kg (18 lb).

14-377-200655.00

For complete specifications, see p 1061.

Accessories for Models 330 and 350

Temperature-Controlled Cuvet Holder

For standard square cells 10x10x45mm. Also accepts cells from 25-100mm high, with max outside dimensions 12.7x12.7mm. Ready for attachment to pump and water bath, using 3.2 or 4mm ID rubber tubing and clamps. Keeps sample within 1/2°C of bath temperature. Range: dew point to 50°C. Quartz windows for use over full wavelength range. Min sample vol: 1ml. With dummy blocking filter for UV attachment

14-377-222127.50
(Turner 330-017)

Vacuum-Emptying Cuvet

Glass tube with funnel top and drain outlet. Remains in spectrophotometer for fast handling of sequential samples. Drained between samples by vacuum. Carry-over between samples usually negligible (less than 1% effect). Sample vol: 2-4ml.

14-377-20824.25
(Turner 330-026)

Wavelength Standard

Holmium oxide glass. For rapid, accurate check of wavelength calibration. Has several very sharp absorbance bands; those near 362 and 537nm particularly useful.

14-377-22534.10
(Turner 330-009)

Replacement Lamp

Auto A1 Adapter

Fisher Digital Readout/Printout/Timer/Auto A1 Adapter Family

Will improve results from your spectrophotometer, AA or AutoAnalyzer®

Concentration Computer

Direct digital readout in absorbance, transmittance, concentration

4-digit display. No involved installation; just plug Concentration Computer into instrument. (See accessory adapter kits.)

Displays readout immediately after placing sample cuvet in spectrophotometer or colorimeter. Simultaneous log conversion and digitization enhances accuracy of system . . . no additive errors of separate, consecutive processes.

Calibration is simple 3min procedure; check just once a day. Introduce standard or control serum into instrument, set mode control to C. Adjust multiplier dial so that concentration of standard appears on instrument's display. Automatically sets slope of calibration

curve. To change tests, just dial in concentration of new standard.

Operating controls include mode switch, decimal switch, multiplier vernier dial (sets concentration from 1 to 10X).

For 115V 60Hz
14-385-110745.00

For 220V 50/60Hz
14-385-111745.00

Specifications

Transmittance: 00.0-100.0%

Absorbance: 00.0-1.999

Concentration: Absorbance multiplied by .1 to 1 as set by multiplier dial

10C: Absorbance multiplied by 1 to 10 as set by multiplier dial

Input signal required:
5-30mVDC

Accuracy: $\pm 0.25\%$ ± 1 digit

Linearity: $\pm 0.1\%$

Multiplier accuracy: $\pm 0.25\%$

Multiplier reproducibility: $\pm 0.1\%$

Stability: $\pm 0.25\%$ /day

Dimensions: 23Lx20Wx13cmH

Fisher Modular Readout/Printout Accessories, Contd.

Auto A1 Adapter

Interface between AutoAnalyzer® system and Concentration Computer

This unique Adapter (plus 14-385-110 Fisher Concentration Computer and 14-385-113 Printer) provide a 3-unit readout/printout system for AutoAnalyzer systems. You can read results (absorbance, transmittance, concentration, expanded concentration) directly from digital display or from tape. No graphs, no approximate values. No false peaks. Even calibration is a simple, 3-minute procedure.

Adapter detects and stores peak data from the AutoAnalyzer. Calibrates only true peak values — no

false peak detection due to noise or base line drift. You can set internal timer for sample rates of 10, 20, 30, 40, 50, 60, 80, and 120/hr.

Solid-state digital logic integrated circuits. Easily attached to AutoAnalyzer. Retransmit potentiometer mounts on strip chart recorder

Concentration Computer and Printer must be purchased separately.

Auto A1 Adapter only.

14-385-1161150.00

Retransmitting Assembly.

Connects 14-385-116 adapter to AutoAnalyzer. One supplied.

14-385-116A100.00

14-385-116

Printer

Permanent record of sample data

Automatic printout on 44mmW pressure-sensitive paper tape. No inking ribbon required.

For sample identification, serial no. of 01-99 sequentially printed in columns 1 and 2. Blank space in column 3 (or 1 or : indicating negative data out-range). Data values in columns 4, 5, 6. Decimal point printed in position set on computer's "Decimal" dial.

Front controls for resetting serializer to 01; initiating cycle; advancing tape; selecting automatic, timed, or manual mode; and controlling power.

Ordering Information: With tape, connector cable, and instructions. 115V 60Hz.

14-385-113925.00

Tape.

14-385-113ARI/4.50

Box of 12/51.00

Printer Specifications

Data input: BCD negative true logic, standard TTL logic levels 3-6. Floating decimal input positive true logic, standard TTL logic levels columns 4-6.

Serializer: Advances 1 digit with each print command. Reset with front-panel pushbutton switch such that next number printed is 01.

Paper advance: Automatic with each line printed; manual advance by pressing "Paper Advance" pushbutton.

Size: 25Lx21Wx11cmH.

14-385-113

For bulletin describing Fisher modular readout/printout accessories in detail, check no. 14 on reader service card at end of blue index pages

Timer

Prints data at selected intervals

Use together with Concentration Computer and Printer. Prints concentration or absorbance at intervals of 15, 30, 60, or 120sec. Also prints specified number of readings (2, 3, 5, or 9). Or continues printing data until turned off. Great for monitoring time-dependent colorimetric reactions

Start and stop Timer manually with pushbutton switches, or set it to start taking readings when sam

ple is placed in spectrophotometer, and stop when you remove cuvet.

Set interval between data printouts with selector switch. Set number of readings to be printed with another. All readings can be given same automatically printed sample number, or each printout can be numbered sequentially.

Signal flashes at 1sec intervals as long as readings are being taken

Size: 25Lx20Wx8.9cmH. Weighs 0.9kg. 115V 60Hz

14-385-115225.00

14-385-115

14-376-10

Fisher Enzyme Spectrophotometer

- **Kinetic analysis with digital display in International Units or concentration units . . . or**
- **General purpose spectrophotometer**

Simply set kinetic rate analysis mode switch for increasing or decreasing absorbance. Enter appropriate absorbance multiplier factor for a given test with Factor Selection Control. Factor is shown continuously on digit register. Instrument does the computation. Shows answer on electronic digital readout directly in International Units (U/liter) or concentration units. The light-emitting diode display includes selectable decimal point, automatic polarity indicator. Resolution in kinetic mode, 0.0001A.

Pushbutton automatic absorbance zeroing. Dial also provided for setting zero manually.

Time interval for kinetic analysis mode is settable by pushbuttons for 15, 30, 60, or 120sec. During analysis, blinking panel light indicates timer operation.

Five pushbutton switches select operating mode to provide display of cuvet well temperature, absorbance, concentration, or 10X

concentration, or for standby. Cuvet well temperature is switch-selected at 25°, 30°, 32°, or 37°C, for requirements of kinetic analysis. Electronically controlled heating block maintains temperature constant within $\pm 0.05^\circ\text{C}$. If temperature variation exceeds this, condition is indicated by panel warning light.

Instrument also serves routine use as a rugged, general purpose spectrophotometer. Nominal band width, 8nm. Wavelength adjustable continuously over 330-700nm range. Wavelength setting shown on digit register.

Ordering Information: Spectrophotometer equipped for kinetic rate analysis or general purpose use. LED digital display of absorbance, enzyme activity, concentration, or cuvet well temperature. BCD output for connection to a printer. Temperature-controlled cuvet well with holder for 10mm square cuvetts and cuvet well cover. 115V 60Hz.

14-376-105250.00

14-376-14120.00

Replacement Lamp.

14-376-1518.00

Fisher Printer. Provides permanent record of sample data as displayed by the spectrophotometer. Uses pressure-sensitive paper tape 44mm wide. See 14-385-113 on p 1098.

Printer Cable. Connects Enzyme Spectrophotometer to Fisher Printer

14-376-1634.00

ATP Integrating Photometer

Quantitation of living cells via adenosine triphosphate (ATP) . . . Great water/wastewater, clinical tool

SAI Model 3000. Measures bioluminescent and chemiluminescent reactions. Specifically the firefly reaction in which luciferin-luciferase release light in presence of ATP. Quantitative assay is possible at extremely low concentrations. As little as 10^{-13} g of ATP can be measured. Provides a fast, sensitive method for biomass measurement and for quantifying cells. Repeatability better than 2%. Total assay time including sample preparation, less than 10min. Reagent cost per assay as low as 5 cents. Simple technique can replace such time-consuming procedures as pour-plating and microscopic counting to evaluate living cell content of dairy products, urine, spinal fluid.

Light is measured by integration or peak height detection mode, with direct digital readout of integrated or peak value. Peak height mode measures maximum intensity occurring in 6sec interval after reactants are mixed. Purified en-

zyme is used for this technique. Integration mode measures total area under light reaction curve for 60sec interval, using less expensive, unrefined enzyme.

Simple operation. Set sensitivity control. Select peak height or integration mode. Calibrate photometer against standards. Insert cuvet containing luciferase. Inject sample and press footswitch simultaneously to start measurement interval. Reading from digital display is interpreted against a standard curve. Press reset button to continue with next sample.

Durable construction. Ideal for mobile labs.

Ordering Information: With digital display, pushbutton controls, sample holder adaptable to various cuvet, selector switch for line voltage, footswitch, recorder output. Dimensions, 36Lx18Wx29cmH. Wt, 5.4kg. 115/230V 48-440Hz, 24w.

14-385-3405500.00

Model 3000 Specifications

ATP Concentration Range	10^{-9} to 1mg ATP/ml
Sample Volume	10 μ l to 10ml
Integration Interval*	6 or 60sec
Delay Interval*	15sec
Over-all Repeatability	Better than 1%
Long Term Stability	Better than 2%
Timing Accuracy	1%
High Voltage Stability	$\pm 0.01\%$ line and load regulation
Overload Protection	High voltage removed from phototube if excessive light is applied.
Recorder Output	0 to 10V. For recorders with adjustable ranges down to 10mV.

***Variable Time Delay and Assay Option.** Photometer can be supplied on special order with selectable delay interval of 0.5, 5, 10, 20, and 30sec, and adjustable integration interval from 10

to 120sec in 10sec increments. Useful for enzyme studies and other applications requiring special time sequencing.

14-385-340

Applications

The ATP luciferin-luciferase reaction has been successfully applied to:

Biomass determination in ocean profiles
Eutrophication studies in fresh water
Food chain studies
Blood analysis
Urine and spinal fluid analysis
Routine bacteria fermenter analysis
ATP coupled and metabolic studies
Yeast cell assay in beer and wine
Activated sludge assay
Sterile solution control
Anaerobic bacteria assay in oil-water samples
Bacterial contamination of dry foods
Bacterial contamination of prepared foods
Cellular propagation and degradation (rate) studies
Dairy products assay
Microflora assay
Potable water assay
Control of biocide additions to open systems
Cellular enzyme studies
Microflora of soils and sediments

Supplies and Accessories

Reagent Kit. Includes five 50mg vials of firefly enzyme, two 1mg vials of ATP standard, three 3g vials of Tris buffer powder, and 100 empty vials.

14-385-34538.00

Firefly Enzyme. Pk of ten 50mg vials.

14-385-346Pk/33.00

ATP Standard. Pk of ten 1mg vials.

14-385-348Pk/12.50

Tris Buffer. Pk of ten 3g vials.

14-385-349Pk/12.50

Calibration Light Source.

14-385-34790.00

Enzyme Kinetics Kit. For studying entire exponential decay curve and peak height measurement. Includes provision for introducing reactants at consistent pressure and for uniform initiation of assay command. Available on special order.

FISHER^{brand}[®] Spectrophotometer Cells

- Path length and matching code on every cell
- Rectangular . . . cylindrical . . . flow thru
- Fused construction

Material	Usable at These Wavelengths
Optical Glass	360-1000nm
Near-UV Glass	300-1000nm
Standard Silica	220-2500nm
Suprasil [®]	165-2600nm, 2850-3600nm
Infrasil [®]	220-3600nm

14-385-932

14-385-926

14-385-914

Rectangular Cells

Fit all standard spectrophotometer cell holders. Cells consists of a body and optically polished windows of high-transmission glass or silica. The body and window are fused, making an acid-proof seal.

Rectangular cells are available with

Suprasil[®] windows for use in 165 to 2600nm and 2850 to 3600nm regions. With Infrasil[®] windows for use over the entire 220-3600nm range. They are supplied with fitted Teflon[®] covers or tapered Teflon[®] stoppers.

Cells for routine work in the visible and ul-

traviolet ranges are available with windows of Near-UV Glass (300-1000nm), optical glass (360-1000nm), and standard silica (220-2500nm). These standard rectangular cells have a 10mm path length and fitted Teflon[®] covers.

Spectrophotometer Cuvets and Accessories

Disposable Plastic Cuvets

Polystyrene or acrylic

FISHERbrand®. Light path 1.0cm within $\pm 1\%$. Square cross-section. Fit standard spectrophotometer cuvet holders. Molding process assures dimensional uniformity for reproducibility in routine testing.

Optical properties of polystyrene provide results comparable to those of glass. Acrylic plastic cuvettes have even greater optical clarity.

Usable in both near-UV and visible ranges. Polystyrene cuvettes are suitable for enzyme analysis.

Cost is low enough to make them disposable. No danger of contamination. No washing problems or expense. Packaged in plastic film to seal out dust.

Polystyrene Cuvets.

Fisher Spectranalyzed® Solvents

Certified reagent grade for use in ultraviolet and/or infrared spectrophotometry. Actual lot analysis on label. Relevant UV absorbance and/or IR transmittance data. Absorbance curves available for each lot. For list of the more than 20 Spectranalyzed solvents, see p 1528 in Chemical Index.

Johnson, Matthey Specpure® Materials

Standards of the highest purity, spectrographically certified. Their excellence is acknowledged internationally. Available in metallic and compound form. Distributed in the United States exclusively by Fisher. See pp 1584-1594 in Chemical Index.

14-385-900

Matched Cuvets

Improve analytical precision

Transmission properties from cuvet to cuvet guaranteed to within $\pm 0.25\%T$. Cuvets are calibrated at 420, 530, and 650nm over visible spectrum. For use with all commercial colorimeters and spectrophotometers. Supplied in protective Styrofoam containers which also serve as protective storage racks.

For Use with	H x Dia	Cat. No.	Pk of 36

Spectro-Standard Filter Kits

Monitor key parameters of most spectrophotometers

Chemetrics all-glass filter set gives you an easy means for day-to-day confirmation of spectrophotometer performance. Recognize problems **before** accumulation of erroneous test data. Self-contained and ready to use. No chemical solutions are needed. Set consists of a 12.5x12.5x50mm holder and series of color-coded filters for checking these parameters:

Wavelength calibration. Holmium oxide filter provides key check points across UV and visible spectral range.

Linearity. Neutral density filters in range of 400-900nm.

Stray light. Checked at 340nm.

Bandwidth. Narrow bandpass filter is furnished for checking bandwidth between 2 and 10nm in 14-377-196 Kit, between 10 and 20nm in 14-377-195 Kit.

Instruction cards are color-keyed for convenient use of each filter. Log book is furnished for performance data entry.

Oxford® Spectro-Chek Reagent Kit

For spectrophotometer performance checks

Use for monitoring linearity, wavelength calibration, stray light. Consists of only 4 solutions. Suitable for spectrophotometers or colorimeters in visual or UV range. Checks at 5 wavelengths in visible, 3 wavelengths in UV.

No dilutions. Each solution is a working concentration. Transfer directly to any cuvet or flow cell.

Entire procedure takes just 5 min. Instrument quality control form included in each set to simplify record keeping.

Box contains set of four 100ml bottles: 2 concentrations of cobalt ammonium sulfate and 2 concentrations of potassium chromate.

Accessories for IR Spectrophotometers

For Solid Samples

14-385-851

Mini-Press™ Pellet Maker

Low-cost press forms KBr pellets easily without evacuation. Pellets formed by compressing action of two highly-polished bolts turned against each other in a steel cylinder. With cylinder, bolts, sample holder, and instructions.

14-385-85128.00

14-385-850

Deluxe Mini-Press Pellet Maker

Same as 14-385-851 but includes special bench-top wrench and T-handle socket wrench to tighten press.

14-385-85060.00

14-385-863

Mini-Cell Holder

Accepts either pellet samples in Mini-Press cylinder or liquid samples in 14-385-858 Mini-Cell. Holder fits conventional infrared spectrophotometers.

14-385-8633.50

14-385-865

Magnetic Film Holder

Handy sample holder for films fits most IR spectrophotometers. Film sample less than 25mm square is held firmly to a steel back-plate by a rubberized magnetic ring.

14-385-86525.00

For Gas Samples

Mini-Gas Sample Cell

Low-cost, unbreakable IR gas cell. Ideal for student use. Cylindrical Plexiglas body.

Dual 5mm ports with replaceable septa. Two NaCl windows, held to body with conventional compression caps. 100mm path length. Supplied with V-shaped mount and instructions.

14-385-88955.00

14-385-889

For Liquid Samples

Mini-Cell Liquid Sample Kit

Two-piece cell unscrews to accept specially-shaped windows. Source light passes through smear sample, 0.025mm or 0.050mm path length sample (see diagram).

With Sample Holder 14-385-863, cell body and six AgCl windows. Packed in reusable container.

14-385-85830.00

Mini-Cell Windows. Replacements or extras for 14-385-858 Kit.

14-385-860Pk of 6/22.00

14-385-858

Demountable Liquid Cell

Ideal for testing viscous liquids. 0.025, 0.05 and 0.10mm spacers for low-cost, multipath-length testing. Choice of NaCl and KBr windows (not included; listed separately below).

Just place appropriate spacer on bottom window, put drop of sample on window within spacer, cover with top window and secure to holder using three thumbscrews. Easy to disassemble, simple to clean. Fits all conventional spectrophotometers.

14-385-87125.00

KBr Window. 25mm dia, 4mm thick. For use with 14-385-871 Demountable Cell.

14-385-87514.50

NaCl Windows. For Demountable Cell 14-385-871. Optically flat, 25mm dia, 4mm thick.

14-385-874Pr/20.00

14-385-871

Precision Sealed Liquid Cell

Cell consists of two NaCl crystals amalgamated together, with a spacer between. Spacer provides cavity for sample. Inject sample with syringe into Luer ports in holder. Ports align with holes drilled in top crystal.

Cell mounts in holder in less than a minute. Accepts very small sample volumes compared to most sealed cells. Fits all Perkin-Elmer, B&L, Unicam, and Hilger & Watts Spectrophotometers, plus the Beckman Microspec, IR-33, and Group A Spectrophotometers.

Cell is available in two thicknesses. Cell mount is not included.

Thickness	Cat. No.	Ea
0.025mm	14-385-877	55.00
0.100	14-385-880	55.00

Cell Mount

For use with 14-385-877 and 14-385-880 Precision Sealed Cells.

14-385-88328.00

14-385-883

Spectroscope

Fast determinations
of material composition

14-406

Examines spectral characteristics of sources, light through filters, samples excited by flame, arc, or spark. For classroom or lab.

Position tube A (see illustration) before source or sample. Light passes through slit, collimator lens, and prism (38mm base length x22.5mm H). Prism refracts and disperses beams, sending them into viewing telescope B. Viewer observes spectral lines superimposed on scale in tube B. Image of scale is effected by illuminator at end of scale tube C.

Viewing tube B rotates to allow scanning of full spectrum and scale. Calibrate scale easily with source of known wavelength. Range of instrument is 400 to 800nm.

14-406.....474.00

Steam Generators

14-437A

Produces 20 pounds (9kg) steam/hr

Multi-purpose generator maintains pressure of 100 lb (7kg/cm²). Consists of Section 1 ASME welded steel boiler tank with rock-wool insulation and outer baked-enamel steel jacket. Heating element in magnesium oxide is enclosed in copper sheath. Automatic water feed control continuously supplies water to boiler at operating pressure of 0.7kg/cm² less than available water pressure.

Ordering Information: With low water cut-off, safety valve, steam pressure gauge, temperature pressure regulator, water gauge, control switch. UL labeled. Electrical capac, 6kw. 48Lx41Wx91cm H. 208V AC, single phase or 240V AC 3 phase. Shipping wt, 75kg (165 lb).

14-437A585.00

14-436-10

Produce steam in less than 10 minutes

Small, compact, portable steam generators generate 11 lb/hr (5kg/hr) and maintain pressure of 50 lb (3.5kg/cm²). Electrical capac, 3000 w. Automatic feed controls continuously supply boiler at operating pressure of 0.7kg/cm² less than existing water pressure.

Ordering Information: With low water cut-off, safety valve, steam pressure gauge, pressure regulator, water gauge, control switch, pilot light, outlet valves, drain valves. UL labeled. 36Lx46Wx36cmH. Shipping wt, 30kg (65 lb).

Rectangular or Cylindrical Sterilizers

Steam or electric heat . . . manual or automatic

14-468

Barnstead Rectangular Model Sterilizers

Operate in range 212° to 270°F (100° to 132°C). Feature special cycles for fabrics, liquids and glassware. Handle liquid exhaust phase with minimal liquid loss by reducing chamber pressure proportionately with liquid temperature.

Double wall nickel-plated steel chamber with cast-bronze door. Handwheel locks door. Can not be unlocked until chamber pressure is relieved. Chamber has 2 monel shelves. Enamelled aluminum exterior.

Steam heated models for 3.5 to 4.9kg/cm²

steam pressure. Electrically heated models have 20 kw, 208-240V AC (specify exact voltage and phase requirements) integral steam generator with automatic water fill pump.

Manual models have single control handle that rotates through heat up, sterilization, and exhaust phases of cycle. Automatic models are pushbutton operated. Have sterilizing and drying timers. Close door to initiate cycle. Audible signal indicates completion. Automatic models also have back-up manual controls and temperature recorder. Controls on all automatic models operate on 115V 60Hz. Both models have thermo and pressure gauges.

C1755	Steam	14-479-55	6430.00

Low Temperature Control

For 14-468-8, 14-468-10 or 14-469-10. Provides attainment of lower temperatures (to 70°C) for pasturization, inspissation, fractional sterilization and melting culture media

14-479-701200.00

1-801B

Automatic Steam Sterilizers

Four handy bench-top models

No special power or plumbing required. Fill with water and plug into 110-120VAC line. To operate, just load, close door, set controls, and push start button. Sterilizer does the rest. For any type lab or facility where sterilization is required.

Maximum safety with safety valves, heavy-duty boiler construction. Meet ASME, UL, and CSA codes.

Four units offered, two Castle and two National, as described at right.

14-488-21

For sterilizing heat and moisture stable materials

Stainless-steel cylindrical chamber, 23 IDx41cmD. In 66Lx41Wx46cmH case. Enameled steel case. Built-in 2.4 liters distilled water reservoir, time-temperature controls, pressure gauge, cycle lights, and on-off switch. 120V 60Hz. Wt, 41kg (90 lb).

14-488-21 1528.00
(Castle 1250)

Vertical Sterilizers

Save bench space

Convenient for small scale steam sterilization in 100° to 135°C range. Unit occupies 0.065m³. Bench space, 0.17m².

Heavy-gauge stainless-steel boiler with aluminum lid. Lid hinged to boiler. Fastened down with large wing nuts and hinged bolts. 2000-watt immersion heater with 3 position switch. Boiler, 36 IDx66cmD.

With pressure gauge, thermometer, stainless-steel storage rack, pressure relief and safety valve.

14-461-5

Portable Steam Sterilizers

Lightweight model (just 13kg)

Holds 20 liters. Aluminum alloy chamber, lid with pressure gauge, integral immersion heater, and safety valve. 110/120V 50/60Hz.

14-461-5 189.00

Sterilizer without Heater

Same as 14-461-5 but without immersion heater. Use on electric hotplate or gas burner.

14-462-5 77.90

14-489

Bacti-Cinerator[®] II Sterilizer

Sterilizes needles, loops, culture tube mouths

Sterilizes in 5 to 7 sec at optimum sterilizing temperature of 872°C. Eliminates microorganism spattering associated with flame sterilization.

Ceramic funnel-tube enclosed in stainless-steel perforated guard and cast-aluminum support stand. 115V 60Hz.

14-489 77.25

Replacement heater and element. For 14-489

Fisher Flexa-Mix™ Stirrers

From gentle mixing to vigorous turbulence

Handles solutions from water to viscous 80% glycerine. Volumes from few ml to several gallons

Stirring action is produced by magnetic induction. Variable speed motor in base rotates powerful magnet. Magnet inside vessel rotates with other magnet to produce stirring action. Adjusting control knob and changing size of stirring bar in vessel varies stirring action.

All models have heavy sheet-aluminum bodies finished in chemical resistant baked enamel. Top plates are anodized aluminum. Freewheel clamp on back used for mounting on lattice or support stand. Two models are available:

Large Square Flexa-Mix

Ideal for volumes up to 1000ml. Speeds to 1650rpm under full load or 2500rpm empty. Knob graduated from 0 to 10 for quick dial reference. 14Lx14Wx11cmH. Light gray finish. With 9-311-7 glass and 9-311-9 Teflon® stirring bars (see p 1115) CSA approved

For 115V 50/60Hz

14-510-100 82.00

For 230V 50/60Hz

14-510-101 98.00

Round Flexa-Mix

Useful in distillation or organic synthesis installation. Operates at speeds from near-standstill at "Low" setting to max of 1650rpm under full load. 2700rpm without load at "High" setting. Base plate used to support stirrer's four rubber feet in rack-mounted assembly. 11diax7cmH. Dark green finish. With 9-311-7 glass and 9-311-9 Teflon® magnetic stirring bars (see p 1115)

For 115V 50/60Hz

14-511-1A 63.00

For 230V 50/60Hz

14-511-1B 65.50

Fisher Jumbo Stirrer

Handles up to 11 liters of low-viscosity liquids

Speeds up to 1550rpm. Knob graduated from 0 to 10. In dark green finish. With 14-511-60 stirring bar (see p 1115) for volumes less than 3.8 liters and 14-511-85 stirring bar (see p 1115) for volumes between 3.8 to 11 liters. 23dia x 16cmH. 115V 60Hz.

14-511-75163.00

Want to combine the function of a stirrer and a hot plate? Turn to p 473 to see 11-493-5 Thermix® Stirring Hot Plate.

Fisher Versamix® and Vuemix Magnetic Stirrers

Produce full-depth vortex

They'll handle all types of everyday mixing jobs in your lab. From small volumes (with micro stir bar) to gallons of viscous fluids (with king-size bar). Samples may be contained in either open or closed vessels. Place container on top of stirrer. Drop in stir bar and set stepless control dial for variable speeds (up to 1500rpm without load).

Stirring action is produced by arc-shaped Alnico driven magnet inside base of stirrer coupled with stirring bar inside container. As magnet is rotated, bar spins inside magnetic field, producing smooth mixing motion.

Both models have heavy die-cast aluminum housing and mar-proof epoxy resin finish. Charcoal and gray. White reference dial, 4 rubber feet, gray control panel, pilot light. Support clamp can be attached to back of stirrers.

Ordering Information

Versamix Magnetic Stirrer. With polypropylene working surface. 19Lx19Wx11cmH. With 14-511-93 Teflon® 5cm stir bar. 115V 50/60Hz.

14-511-9090.00

Vuemix Magnetic Stirrer. Similar to Versamix but with translucent top and fluorescent illuminator. Great for viewing end points in titration. Provides 316cm² of shadowless illumination. Light controlled by separate pushbutton switch on control panel. 19Lx19Wx11cmH. With 14-511-93 Teflon® 5cm stir bar. 115V 50/60Hz.

14-511-92120.00

14-511-100

Stir-Light Magnetic Stirrer

With illuminated base

Mixes liquids from 60 to 1500rpm from gentle movement to violent agitation. Ideal for clinical chloride and calcium titrations, EDTA titrations, algae culturing, extractions, magnesium titrations on muscle tissue. Also functions as light box for visual inspection without glare.

Ordering Information: Transparent plexiglass 13cm square top with two fluorescent lamps and large Alnico V magnet beneath. Stainless-steel case with reference dial. Over-all: 18Lx18Wx11cmH. With 2 Teflon® stirring magnets, one 7.9dia x25mmL and the other 9.5dia x50mmL. Shipping wt, 2.9kg (6.5 lb). 120V 60Hz.

14-511-10093.00
(Thermolyne SL7225)

Cool Plate . . . an effective heat barrier

Hollow disc of clear plastic with inlet and outlet connections for 6.4mm tubing. Acts as heat barrier for stirrers, rheostats, lamps, metal workbenches. Connect tubes and adjust flow of water to remove right amount of heat. Dia, 15cm. Thickness, 13mm.

14-511-11021.00
(Thermolyne PT-10000)

14-511-200

Magnetic Stirrer

Stir without worrying about chemical spills

Model PC-353 Magnetic Stirrer features Corning's Pyroceram® glass ceramic top. White matte surface is highly resistant to scratches, chemicals. Easy to clean. Won't break. Regulated stirring on control dial from "Slow" about 250rpm to "Fast" about 1000rpm.

Ordering Information: Cast-aluminum epoxy-coated base with skirted top. Work surface: 226cm². Over-all: 18Lx13Wx13cmH. With Teflon®-coated stirring bar. Net wt, 3kg (6.75 lb). 120V 50/60Hz. UL listed.

14-511-20064.00
(Corning 6795)

14-509-3

Super-Powered Stirrers

Handle large volumes

Two magnetic stirrers tackle big stirring jobs with ease. Model 28 stirs volumes to 20 gal (80 liters); Model 29, to 30 gal (120 liters). Speed range, both models: 10 to 200rpm (low range) and 10 to 380rpm (high range.) Stepless speed adjustment...no varying speed fluctuation from empty to full load.

Low profile design. Powered by high strength Alnico horseshoe driving magnet. White polypropylene tops resist corrosion. Case has durable green baked-on epoxy finish. Strong carrying handles for easy transporting.

Ordering Information

Model 28 Stirrer. 46Lx46Wx17cmH. 120V 50/60Hz. Without stirring bar and tank.

14-509-3325.00

Model 29 Stirrer. 58Lx58Wx22cmH. 120V 50/60Hz. Without stirring bar and tank.

14-509-4575.00

Magnetic Stirring Bars

14-511-59

Magnetic Spinbar® Kit

Contains following 16 octagonal Spinbars for use with magnetic stirrers: two 8dia x 13mmL; two 8dia x 16mmL; two 9.5dia x 25mmL; two 9.5dia x 38mmL; two 9.5dia x 51mmL; two 9.5dia x 64mmL; and four micro, two 2dia x 7mmL and two 3dia x 10mmL. Micro bars are in 13mm tubes with caps. Teflon®-covered with pivot ring. Permanent Alnico-V magnets. Reusable box.

14-511-59Pk/39.50

Separate Spinbars. Same as those described above, but available individually.

Fisher Dyna-Mix Stirrer

Stirring speeds to 6000rpm

Meets day-to-day mixing needs of most labs. It's Model 143, and consists of motor assembly, speed-control unit, 31cm impeller, and adapter sleeve.

Solid-state direct-drive motor has two output shafts. Armature shaft produces speeds from 0 to 6000rpm at 17mm/kg. An 18:1 gear reducer shaft produces speeds from 0 to 300rpm at 34cm/kg. Both shafts operate in forward and reverse directions.

Ordering Information: Control unit with forward and reverse direction knob and speed control knob graduated over 0 to 10 scale. Control unit: 17Lx11Wx10cmH. Net wt 1.5kg. Motor: 17Lx9.5cmW. Net wt 2.3kg. With 14-503-15 impeller (31cm) and adapter. Without 14-501-20 impeller (46cm) and 14-498-10 chuck.

For 115V 50/60Hz

14-498-15245.00

For 230V 50/60Hz

14-498-46245.00

To clamp motor support rod to stand or lattice bar, Jumbo Clamp Holder or any other Fisher Castaloy® holder can be used. See p 191.

For stirring viscous fluids in deep containers, use 14-501-15 impeller (41cm) or 14-501-20 impeller (46cm) with 14-498-10 chuck assembly. See p 1117

Fisher Stedi-Speed Stirrer

Maintains constant speed regardless of viscosity changes

Monitors viscosity and automatically supplies more or less motor power as load increases or decreases. Once stirring speed is adjusted, stirrer stays at that speed no matter how load changes.

24V ball-bearing motor with two output drive shafts and speed adjustment unit. Direct drive gives speeds from 300 to 3000rpm graduated in 100rpm intervals at 45mm/kg with 5% reproducibility with no load to double rated load. Geared down drive gives speeds from 50 to 500rpm graduated in 25rpm divisions at 28cm/kg with 10% reproducibility.

To operate, attach motor shaft adapter with impeller to proper output shaft depending upon speed desired. Attach chuck assembly if using impeller with up to 9.5mm dia shaft. Place impeller in solution. Set two concentric dial scales to regulate speed. Turn switch to "FWD" for clockwise stirring or "REV" for counterclockwise stirring.

Ordering Information: Sheet metal control unit finished in dark brown baked enamel. 20Lx25Wx14cmH. With 5-757 Jumbo Clamp (see p 191), 14-498-10 chuck assembly, key, Allen wrench, 14-503-15 impeller (31cm).

For 115V

Direct-Drive Stirrer

For economical mixing

This electrically driven stirrer uses 1/100hp brushless shaded-pole induction motor to produce a speed of 1600rpm. Stainless-steel propeller. 4.4dia x 20cmL. With iron clamp for mounting. 115V 60Hz.

14-50363.00

14-509-1

Heavy-Duty Stirrer

Stirs up to 38 liters of viscous liquid

Equipped with 1/15hp electric motor. Operates through reduction gear. Built-in rheostat provides speed control from 80 to 725rpm. Adjustable propeller and shaft.

Ordering Information: With clamp for mounting on tank, jar, or bath. Stainless-steel propeller shaft: 1.3 dia x 61cmL. Stainless-steel propeller with 14cm dia. Shipping wt 4.1kg (9lb). 115V.

14-509-1218.00
(Eastern Industries 8A)

14-509-6

Lab Stirrer

Mixes up to 11 liters of light liquids

Continuous, heavy-duty — variable speed — quiet, vibration-free mixing of light liquids. Consists of 1/30hp, fan-cooled, totally enclosed motor that provides speeds from 100 to 1550rpm. Safe with flammables. Chuck adjusts to fit shafts up to 9.5mm dia.

Ordering Information: With 30cm shaft, 7.6cm propeller. "C" clamp mount. Shipping wt 3.2kg (7lb). 115V 50/60Hz.

14-509-6150.00
(Eastern Industries 5VB)

14-500

High Torque Stirrer

Handles viscous liquids easily

Compact stirrer with extra-high torque handles any liquid — from watery solutions to most viscous colloids. Operates as slowly as 45rpm — or as vigorously as 2000rpm without strain. Stirrer automatically supplies more or less motor power as viscosity of load increases or decreases. No need to readjust speed no matter how load changes. Ideal for work with emulsions, suspensions, or liquids that change viscosity.

Adjustable low settings from 45 to 300rpm; high settings from 300 to 2000rpm. A switch changes from one range to the other.

Hollow drive shaft lets you slide paddle up and down 400mm long shaft without motor moving.

Friction gear and condenser motor system eliminate maintenance.

Ordering Information: Without chuck, clamp assembly, stand, or paddles. 115V 60Hz. Weight, 3.8kg.

(Precision 65730)

Fisher Safety Stirrers, Air-Driven

For flammables . . . no igniting sparks

14-504-2

Economical Stirrer

Ideal for intermittent mixing. Operates at 0.7kg/cm² of air pressure with 20 liters/min volume. Drives stirrer to 1800rpm without load. With 20cm stainless-steel shafted propeller.

14-504-230.00

14-508-5

Heavy-Duty Stirrer

For continuous heavy-duty use. Motor slows as load increases (viscous liquids, for instance) . . . will not burn out. Operates at 2 to 6.3kg/cm² of air pressure with 57 to 227 liters/min volume. Built-in muffler for quiet operation. Corrosion-resistant aluminum-monel-stainless-steel construction. With 3-blade propeller, 31cm steel shaft, ringstand clamps.

14-508-5119.00

For Perfect Mixing in Cuvets

Unique magnetic centrifugal stirrer fits into standard 10mm light path spectral cells. Provides rapid vertical and horizontal mixing with aluminum vortex when placed on magnetic stirrer. Centrifugal pumping mixes without aeration. Photometric measurements can proceed uninterrupted while reagents are added.

Umbrella Stirrer

Fits into narrow neck flasks, bottles. Fisher Umbrella Stirrer with twisted blades collapses and expands like an umbrella to fit into any narrow-necked container. Once through neck of vessel, stirrer can be expanded to much larger diameter to produce varied mixing action. Designed by Dr. Morris M. Graff of National Cancer Institute. Central shaft dia, 4.8mm. Stirrer L, 31cm. Movable sleeve L, 13cm. Blades L, 11cm. Disc dia, 19mm. Stainless steel.

14-514

57.00

Sleeve Stirrers

These PYREX® brand borosilicate glass stirrers are for agitating corrosive and caustic solutions in vessels having $\frac{1}{8}$ ground joints. Stirrer consists of sleeve with $\frac{1}{8}$ joint; rod; two Teflon® stirring paddles; metal adapter for adapting stirrer to 6.4mm chuck.

Bearing surfaces approx 7.6cmL in plain sleeve for moderate temperatures and 11.4cmL in water-jacketed sleeve for higher temperatures. Sleeves approx 13cmL over-all.

Teflon® paddles are in shape of partial circles, split and hinged with Teflon® pin. Curved sides are for stirring in round-bottom vessels; straight side, in flat-bottom vessels. 36cm stirrer supplied with small and medium paddle units for flasks up to 5000ml. 46cm stirrers supplied with medium and large paddle units for flasks from 5000 to 12000ml.

Fisher Clinical Rotator

70 to 210 oscillations per minute

14-251-200

Fisher Clinical Rotator provides speed range and amplitude of rotation needed for VDRL, APHA, Kline, Mazzini, serological flocculation and agglutination tests. Up to 24 slides in 7.6Lx5cmW size can be tested on rotator's 33cm square rubber platform.

Slides are placed on platform for testing. Integral timer is set at periods between 0 to 25 min or to operate continuously. Speed control is set by sliding index knob over 70 to 210 oscillations/min range with markings at 90, 110, 170 and 180 for quick location of speeds most frequently used. Speed governor, calibrated at 90 and 180 oscillations/min, eliminates speed changes due to variation in load or voltage. Bell signals end of timed rotation.

Ordering Information: Heavy sheet metal construction, with 4 rubber suction feet. With 14-251-205 slide platform. 33Lx33Wx18cmH. Shipping wt 11kg (25 lb). 115V 50/60Hz. 14-251-200328.00

Slide Platform

Rubber 33cm square tray with 3.2mm raised edge. Holds up to 24 slides in 7.6Lx5cmW size. Extra platforms eliminate need to unload platform before a new run.

14-251-20524.50

For 7.6Lx5cmW slides with ceramic rings used in serological flocculation and agglutination tests, see 12-568-30 slides on p 649.

Wrist-Action® Shakers

Shake up to 12 containers at one time

Wrist-Action® Shaker provides gentle to violent agitation for up to 8 or 12 volumetric flasks of any size; bottles up to 118ml capac; Erlenmeyer short neck flasks; flat or round bottom flasks up to 200ml capac; test tubes up to 55mm dia. Mix at any set time up to 55 min or continuously.

Degree of shaking controlled by adjustment knob with 0 to 10 settings. Full torque of motor is applied directly to assure even motion at all speeds. Loads do not have to be equalized or balanced.

Ordering Information
Shaker for up to 8 containers.
 Consists of 1/8hp motor, oscillator controls, 2 interchangeable rods with 8 snap clamps; case. Shipping wt 50kg (110 lb). 115V 60Hz.
14-260390.00

14-260

Shaker for up to 12 containers
 Same as 14-260 shaker but for 12 containers.

14-260-10410.00

Heavy-Duty

14-255

Two Versatile Eberbach Shakers

One for 14kg sample loads . . . one for 23kg

14kg Table Model Shaker

Shaker has 1/30 hp split-phase motor that drives shaker mechanism through mechanical transmission. Utilizes variable pitch pulley system with V-belt drive. Mixing speed is variable from 20 to 240 excursions/min. Stroke is adjustable to 13, 25, 38mm. Handles loads up to 14kg. Speed adjusting knob and on-off switch on front panel.

Ordering Information: With small platform having 168 six mm dia holes for mounting flask holders. Uses 14-264 carrier and 14-270 flask holders (see next page) to accommodate different loads. 31Lx36Wx25cmH. 115V 50/60Hz.

14-262432.00
 (Eberbach 5850)

14-262

23kg General-Purpose Unit

This shaker produces speeds from 60 to 260 excursions/min at fixed 38mm stroke. Constant speed 1/6 hp motor can mix loads up to 23kg. Optimum mixing depends on viscosity of fluid and shape of container.

Ordering Information: Speed control with locking knob, on-off switch, 4 rubber feet. 62Lx36Wx25cmH. 115V 60Hz. Uses 14-269 plate and 14-266 carrier (see next page) to vary carrying loads.

14-265517.00
 (Eberbach 6000)

14-265

Shaker

For Kahn testing

Shaking machine with 4-rack carrier agitates at 280 excursion/min through 32mm stroke distance. Constant-speed ¼hp motor drives shaker through V-belt drive. Rubber suction-cup feet, bronze bearings. Finished in gray hammertone 42Lx29Wx31cmH. With Kahn racks. Shipping wt 52kg (115 lb). 115V 60Hz.

14-255282.00
(Eberbach 6460)

For Kahn racks, see 14-806 and 14-807 on p 1144.

14-261

Equipoise Heavy-Duty Shaker

Handles loads up to 45kg

Useful for mixing and agitating solutions, emulsions, dispersions, colloids. Operates on bench top. 265 oscillations/min with loads up to 45kg.

Place container up to 19-liter carboy in shaking compartment. Adjust movable block from 6.4 to 330mm for locking in container. Turn switch on. Motor and shaking compartment oscillate over 6cm distance in opposite directions to

provide a balanced reciprocal motion.

Ordering Information: Lacquered hard maple shaking box. 37Lx29Wx14cmH. Single phase ¼hp motor. Over-all size: 85Lx37Wx31cmH. Shipping wt 75kg (165 lb). 115V 60Hz.

14-261855.00
(Precision 65855)

Eberbach Accessories

14-264

Carrier for 14-262 Shaker

Used for holding various shaped containers. Slots in four sides accommodate crosswise bar in either direction to secure containers in carrier. 31Lx31Wx10cmH. With rubber mat, 14-267 crosswise bar clamp, mounting screws.

14-26439.50
(Eberbach 5865)

14-266

Carrier for 14-265 Shaker

Holds six 1000ml or two 4000ml Erlenmeyer flasks, or five Kahn tube racks, or other containers that you need mixed. Uses both 14-267 crosswise bar clamp and 14-268 lengthwise bar clamp. Clamps are secured in wall slots by wing nuts on each side. Vertical rod with support fastened in corners holds irregularly shaped containers. Aluminum box with rubber covered floor, mounting screws, 14-267 crosswise bar clamp. 46Lx31Wx10cmH.

14-26646.00
(Eberbach 6040)

Crosswise Bar Clamp

Rubber covered 33cm bar with wing nut ends. For 14-266 and 14-269 carriers.

Differential Fluid Control

Needle valve with glass connectors provides differential control of fluid delivery. Max flow rate at 0.7kg/cm² is 20.00 ml/min. By turning knob, needle is raised and a free path is formed between glass connectors. Teflon® and glass. Bore, 4.7mm. Knob dia, 32mm. Glass connector: 10 dia x 48mmL.

14-630-6.....47.50

Two-Part In-Line Valves

Teflon® needle valve, stems with glass body give precise flow control for either gas or liquid applications. Greaseless, double-sealed stems with millimeter graduations for easy duplication of flow rates. 12 turns from fully open to completely closed. Fluid contacts only glass and Teflon®

Bore	Cat. No.	Ea

Stopcock Lubricants

14-635-5

14-635-A

C-601

C-602

S-530

General Purpose

Lubricants reduce friction, heat, and wear on glass and metal surfaces. Prevent rubber tubing from sticking to glass connections. Also used as sealant for desiccators, anaerobic jars, and similar containers.

Lubriseal®

Stable, smooth-textured, and odorless lubricant-sealant. Low vapor pressure, silicone-free. Resists attack by acidic and alkaline solutions. Insoluble in water. Melting point, 52°C. 25g tube.

14-635L.....Ea/ .85
Case of 12/9.18

Dow-Corning Stopcock Grease

Translucent silicone grease with consistency of petrolatum. Heat and chemical resistant. Non-melting, non-toxic, non-carbonaceous, and low volatility. Functions efficiently from -40° to +204°C.

Tube Size	Cat. No.	Ea
2 oz (57g)	14-635A	2.15
8 (227)	14-635B	7.43

Vacuum Applications

Vacuum greases not only lubricate but form leakproof seals. Their low vapor pressure must not contribute to pressure within closed vacuum system.

Dow-Corning Hivac

Stiff, non-melting silicone lubricant that maintains its consistency from -40° to +260°C. Chemical resistant, non-carbonaceous, and low vapor pressure.

Jar Size	Cat. No.	Ea	Pk of 12
2 oz (57g)	14-635-5A	2.15	24.48
8 (227)	14-635-5B	7.43	83.16

Apiezon

Unsurpassed sealing agents and lubricants for high vacuum applications. 14-638-15B is excellent all-purpose high vacuum lubricant; 14-638-15C is inexpensive enough to be used as general purpose grease; 14-638-15D forms rubbery cushion protecting glass-

Cello-Seal

Low vapor pressure lubricant with consistency of petrolatum. Maintains consistency at 100°C. May be blended with Cello-Grease for heavier consistency. Specify size.

C-6011 oz (28g) tube/5.80
6x1 oz (28g)/27.90
¼ lb (113g) jar/15.00
6x¼ lb (113g)/72.00

Cello-Grease

Similar to C-601 except that it is heavier, darker, and has higher maximum operating temperature. (119°C). Specify size.

C-6021 oz (28g) jar/5.80
6x1 oz (28g)/27.90
¼ lb (113g) jar/15.00
6x¼ lb (113g)/72.00

ware from shock; 14-638-15A and 14-638-15E are recommended for high temperature applications. 14-638-15B also recommended for stationary liquid phase in gas-liquid chromatography.

Following specification table should also help you choose right grease for your applications.

Apiezon Type	Temperature Operation Range	Vapor Pressure torr at 20°C	Size	Cat. No.	Ea
H	-15° to 250°C	10 ⁻⁹	25g	14-638-15A	30.00
L	10 to 30	10 ⁻¹¹	50	14-638-15B	28.00
M	10 to 30	10 ⁻⁸	100	14-638-15C	22.50
N	10 to 30	10 ⁻⁹	25	14-638-15D	26.50
T	0 to 120	10 ⁻⁸	25	14-638-15E	28.50

Special Applications

Nonaq Stopcock Grease

Was developed for use with acetic anhydride, acetophenone, benzaldehyde, benzene, bromobenzene, carbon tetrachloride, chlorobenzene, cyclohexane, ethylacetate, ethyl bromide, and ethylene dichloride. Not to be used with water, alcohol, or aliphatic acid solutions. 1 oz (28g) applicator bottle.

S-530.....Ea/3.05
Case of 6/15.30

Fluorolube® Grease GR-90

For use with acids, ozone, oxidants, and halogens. Has excellent metal on metal lubricating properties. Removal is accomplished with organic solvents. Specify size.

F-161 oz (28g) tube/10.30
Case of 6x1 oz (28g)/49.50
¼ lb (113g) tube/28.45
Case of 6x¼ lb (113g)/136.50

Fluorolube Oil, LG-160.

Oil or grease consistency. Please specify size.

Flexaframe® Support

- Will handle a variety of apparatus
- Stable
- Safe

Tough aluminum alloy lattice holds all kinds of apparatus. Attach them with Castaloy® clamps and holders, all of which fit the frame's precision-ground $\frac{1}{2}$ " (13mm) rods. Rods are held together with corrosion-resistant Castaloy Hook Connectors (14-666-18). Disassembles in minutes. Easy to store. By using the accessory rods listed at right, you can custom-make a setup to fit your particular needs.

Contents of Flexaframe Sets

14-666-26

14-666-23A

Multiclutch Connectors

Connectors permit lattice adjustment after construction. Multiclutch connectors hold Flexaframe rods at 90° angle in lattice. Allow horizontal and vertical adjustment after lattice is built. Two adjacent rods fit into oval hole in connector, prevent turning when tightened. Holes in side and front of connector allow many different rod configurations.

14-666-22	Ea/5.25
	Lot of 12, ea/4.75
	Lot of 72, ea/4.45

Swivel Connector

Rotates 360°. Mount anywhere on lattice without having to disassemble rods. Secures two rods at any relative angle. Rods won't twist or slip. Connector made of strong, die-cast aluminum.

14-666-26	Ea 3.60
	Lot of 12, ea/3.25
	Lot of 72, ea/3.05

Open Rings

Hold leveling bulbs, funnels. Mount in connectors 14-666-20 and 14-666-22 for use on lattices. Not for use with burners or containers to be heated. Aluminum, 1/2" (13mm) dia stem.

Super Flexaframe® Set

If you need a super strong lattice

For extraction apparatus, banks of distillation columns, other pilot plant setups. Outside frame is strong, lightweight steel channel. Lattice made of sturdy aluminum Flexaframe rods. Employs Superflex connectors: one end accommodates rod, other fits into channel and locks tightly with a bolt. Loosen the bolt and connector slides along channel track for easy lattice adjustment. Entire apparatus supported on heavy, stable, cast-iron feet. For top-heavy configurations, feet may be bolted to the floor.

Ordering Information: Size: 6Lx4'H (1.8Lx1.2mH). Supplied with five 48Lx1/2" dia (122cmLx13mm dia) rods for vertical mounting, three 72Lx1/2" dia (183cmLx13mm dia) rods for horizontal mounting. Set includes Superflex connectors and hook connectors which hold lattice rods securely at 90° angles. Can be easily modified by removing or adding rods. Enamel finish. Weighs only 34kg. Set includes:

Supports

Fisher Lab/Lift™ Support

Handles loads to 45kg at heights from 7.6 to 31cm. The Fisher Lab/Lift™ support has a platform with 4 mounting holes for small equipment such as Versa-Mix™ and Vue-Mix™ magnetic stirrers, Thermix® Hot Plate/Stirrer, Rota/Plate™ revolving turntable, etc. Also threaded hole for 1/2" (13mm) Flexaframe® rod.

Steady, controlled lifting and lowering on scissors principle. Large, easy-grip knob attached to threaded steel rod with corrosion-resistant lubricant.

Ordering Information: Base and loading platform: 15x18cm. Lifting capacity: 11kg@ 8.9cm; 23kg@ 10cm; 34kg@ 13cm; 45kg@ 14cm.
14-673-1058.00

Fisher Mini Lab/Lift

Handles 4.5kg loads. Designed for micro and semi-micro lab work, sturdy Fisher Mini Lab/Lift lifts 4.5kg loads to a maximum 13cm height. An ideal microscope substage. Loading platform, 7.6x7.6cm. Otherwise same as 14-673-10.

15-305

Fisher Autotensiomat® Surface Tensiometer

Automatically measures liquid surface and interfacial tension

Handles measurements with maximum accuracy and precision. Reproducibility controls crucial test parameters including ring extraction rate and sample temperature. Reveals real nature of complex surface energy relationships undetectable with static measurement. Provides graphic representations of those dynamic relationships through convenient potentiometric recorder accessory. Very useful tool that examines physical properties of organic synthesis compounds, determines spreadability of paint and varnish, dispersion of pigments, lubricant penetration, and adhesive film formation.

Simple operation. Motor-driven platform with jacketed, glass sample vessel is lowered at predetermined, constant rate causing drag on known-size, platinum-iridium ring immersed in sample. This drag-force exerted ultimately on supporting balance beam is converted to analog signal by strain-gauge transducer. Registers on meter in control module. When potentiometric recorder is connected, signal registers as force/displacement curve expressing surface tension directly.

Choose from ten platform speeds in 0.005 to 1.0"/min (0.127 to 25mm/min) range to accommodate many liquids. Control sample temperature by connecting constant temperature circulating pump to jacketed sample vessel. Monitor temperature with mercury thermometer. Instrument also facilitates signal suppression with 15-step control, to keep curves within recorder range. Permits full-scale "zero" shift and calibration with two continuously adjustable controls mounted on control/readout module.

Sample module and control/readout module are separate on instrument to ensure maximum stability, minimum interference with sample during tests. Tests may be made with du Nouy rings, Wilhelmy plates, or special configurations. Small coated parts or polymer films, for example, can be tested to determine surface energy characteristics for that part and particular liquid.

Ordering Information: With platinum-iridium ring, calibration weights, jacketed sample vessel, and operating instructions. See "Accessories" for potentiometric recorder, extra ring, and circulating pump

14-8113010.00

14-811

Performance Specifications:

(du Nouy Ring Method)

Sample Size:	25 to 125ml
Readout:	Analog Panel meter (potentiometric recorder optional)
Range:	0 to 100 dynes/cm
Ultimate Capacity:	1225 dynes/cm
Sensitivity*:	0.02 dynes/cm
Relative Accuracy:	±2%
Precision:	0.25% s.d.
Resolution:	
Meter:	0.10 dynes/cm on 0-10 dynes/cm range
Recorder:	0.02 dynes/cm on 0-5 dynes/cm range
Elevator Speed Range:	0.005"/min to 1.00"/min (0.127 to 25mm/min) in 10 steps
Output Signal Suppression:	0 to 15 mV in 1.0 mV steps

*Based on potentiometric recorder readout with 1" chart span and 1 mV full-scale response

Autotensiomat Accessories

Portable Potentiometric Recorder

Single pen. 1mV FS response. 0.5, 1, 2, 4, and 8 ipm/iph (1.3, 2.5, 5, 10, and 20 cm/min and cm/h) chart speeds. See p 1007 for more details.

13-939-10585.00

Circulating Pump

Thermostated. Haake. 115VAC 50/60Hz.

13-874-114495.00

Platinum-Iridium Test Ring

Replacement. For use with 14-811 tensiometers. In protective, hard maple cylinder.

14-812-5147.00

In-Line Stirrup

Holds platinum-iridium ring

14-811-562.50

Water Circulating Vessel Kit

Consists of circulating vessel, thermometer with -5° to +50°C range, ball-and-socket clamp, ball joint connector, and several feet of Tygon® tubing

14-811-10260.00

Fisher Surface Tensiometers

For manual or semi-automatic operation

Choose from manually operated Tensiometer or semi-automatic Tensiomat®. Both perform in accordance with ASTM D-971 (oil-water interfacial tension procedures) and D-1331 (methods for measuring surface and interfacial tension of detergents). Both employ du Nouy ring method. Direct results, no calculations. Maintain accuracy that duplicates data from capillary-height or drop-weight measurements to within $\pm 0.25\%$.

In du Nouy method, platinum-iridium ring of precisely known dimensions is suspended from counter-balanced lever-arm. Arm is held horizontal by torque applied to attached stainless-steel wire. Increase in torque raises arm, pulling ring from liquid. Force necessary to separate ring from liquid is measured and read directly to ± 0.05 dyne/cm. For use in comparative studies, data is easily convertible to absolute values using graph in supplied instructions.

Both instruments are easily moved from place to place. Simple to set up. Metal case with corrosion-resistant epoxy-enamel finish has convenient carrying handle, integral bubble-level, and two adjustable feet. Door with magnetic catch protects apparatus from dust, drafts, and corrosive fumes. Heavy base minimizes vibrations. Adjustments of tension on stainless-steel wire, support arm length and zero-setting on dial are easily and quickly made.

With platinum-iridium test ring and two stainless-steel torsion wires.

Ordering Information:

Model 20 Tensiometer

Principally the "workhorse" instrument for educational and industrial control applications, Model 20 is nonetheless sensitive enough for research work. Application of torsion to raise ring and simultaneous lowering of sample table are done manually. Parallax errors are eliminated by aligning index needle on lever-arm with engraved line on mirror. Tensiometer is capable of upward and downward measurement of tension. Dual scale is graduated from 0 to 90 dynes/cm in clockwise and counterclockwise direction. 115VAC 50/60Hz.

14-812.....765.00

Model 21 Tensiomat®

Similar to Tensiometer in test methodology, but more accurate. Uses reversible, synchronous motor to raise and lower test ring and sample table. Provides movement at uniform rate. Premature ring break-away from liquid (and consequently false tension reading) is eliminated. Error from manual adjustment of sample level can be avoided by first running test with motor off to determine sample position when ring breaks free, then allow-

14-812

ing table to remain fixed at that position for actual tests.

Simple to operate, Tensiomat has two-way switch for choosing direction of travel for ring and pilot light. 115V 50/60Hz.

14-814.....972.00

Replacement Part

Platinum-Iridium Test Ring

For use with 14-812 and 14-814 tensiometers. In protective, hard maple cylinder.

14-817

Surface Tension Apparatus

Makes determinations easily

Apparatus includes 250mm borosilicate glass capillary tube (graduated from 0 to 10cm in 1 mm increments) and outer tube. Graduations are engraved. Capillary tube is held inside outer tube by means of a cork. Outer tube accommodates rubber tubing. Determine surface tension from height of liquid in capillary tube. Method detailed in *Findlay's Practical Physical Chemistry*, 8th edition, pp 94-97.

14-817.....16.90

Replacement Capillary Tube

With scale. For 14-817.

14-817A.....8.50

Syringes and Needles

FISHERbrand® Syringes

14-820

Prevent backflow during injection

Reusable inexpensive syringes with ground barrels and plungers. All have metal Luer-lok® tip except 1ml size. Annealed glass permits sterilization by boiling. 1 and 2ml sizes graduated in minims as well as ml; all other sizes graduated in ml. The 1ml size with white plunger and glass slip tip is for tuberculin use. In pasteboard boxes. Without needles.

Repeating Dispensers

Uses just $1/50$ th of its capacity each time

Fits all Hamilton syringes from 25 μ l to 2.5ml. Valuable for thin layer chromatography, droplet placement, preparation of standard reagents, uniform injections. With 25 μ l syringe and fixed needle.

14-822-10 63.00
(Hamilton PB600-1 and 702N)

14-822-10

For use with 5 and 10ml syringes

Same as 14-822-10 but for larger syringes. With 5ml syringe and fixed needle.

14-822-15 71.00
(Hamilton PB 800G 10 and 100SLT)

Syringe Cleaner

Fast, effective

14-824-50

Combines vacuum and high temperature to vaporize and remove residue from microliter syringes with fixed needles. High boiling squalene, for example, is removed after 20 sec under low vacuum. Contaminants with high boiling points require a vacuum of better than 0.1mm mercury whereas common materials used in gas chromatography can be cleaned off syringes with water aspirator. Clean syringes by drawing continuous flow of suitable solvent through glass barrel and needle. 120V.

14-824-50 60.00
(Hamilton 76610)

Replacement Septum

For 14-824-50 cleaner, 5mm thick.

14-824-51 Pk of 12/3.60
(Hamilton 76022)

Becton-Dickinson Single-Use Hypodermic Equipment

Disposable PLASTIPAK® syringes and Yale® needles eliminate washing and sterilization, provide safety too, since they're used only once.

Syringes of non-toxic, pyrogen-free polypropylene. Luer-Lok® syringe tips prevent accidental needle separation. Syringes available with or without needles.

For easy identification of needle gauge,

shipping container, needle package and needle hub are color-coded. All syringes are heat sealed in a peel-down color-coded paper package.

Yale sterile disposable needles with extremely sharp Microlance® points minimize patient discomfort. Cannulae are siliconized to reduce resistance and maintain speed and smoothness throughout injection. All have

regular bevel except 14-826-10 which has intradermal bevel. Needle hub fits any Luer-Lok or Luer slip syringe tip, reusable or disposable.

Individually blister-packaged and boxed in strips of 5 needles. Sheath protects point and cannula. Package carries lot control number to indicate complete sterility.

14-826-123

Destruclick® Hypodermic Safety Device

Destroys used needles and syringes

Sharp stainless-steel blade of Destruclick® safety device severs cannula from needle hub, syringe tip from barrel of disposable hypodermics. Needle won't bend, syringe won't get jammed. Greatly reduces chance of accidental punctures. Prevents reuse.

To use Destruclick device: Insert needle of used syringe into small opening. Squeeze handles together. Remove, insert syringe tip into larger opening. Squeeze again. Small opening takes needles up to 18 gauge. Replaceable cup inside unit collects clipped pieces for safe disposal.

Bright red 5¼ oz (156g) container is easily carried to injection site. Hypodermics can be destroyed immediately after use.

Unit is easily cleaned; can be autoclaved. 10Lx10Wx13cmH.

Tapes

Wide assortment for variety of lab jobs

Electrical Tape

Insulates wire. Vinyl, all-weather. Resists oil, water, acids, and alkalis. Stretchability permits molding to irregular surfaces. Only 0.22mm thick but has dielectric strength of 8500 volts. 20m x 19mmW roll.

9-356Roll/2.05
Case of 10 rolls/18.70

Autoclavable Identification Tape

Even adheres to Teflon®. Fast sorting and claiming of your autoclaved items. White plastic self-stick tape. Tag items by simply applying tape to smooth surface. Resists water, oil, and acids. 9.5mmW. 5m rolls with dispenser.

11-848-10Roll/3.25
Box of 12 rolls/35.40

11-848-10

Colored Polyethylene Tape

Economical film tape that stretches easily to cover items of different sizes and shapes. Excellent for wrapping Dewar flasks, vacuum bottles, and other glass vessels to reduce possible injuries from implosion. Ideal for making transparent containers opaque. In 33m rolls.

11-866

W	Color	Cat. No.	Roll	Case of 12 Rolls
50mm	Black	11-866A	6.02	63.60
50	White	11-866B	6.02	63.60
25	White	11-866-2	3.00	31.80

Transparent Polyethylene Tape

Clear film tape used to secure bulky specimens to glass slides for viewing under microscope. Convenient way to store, catalog, and ship specimens. Also, used to seal bottles containing moisture sensitive compounds. 25mmW. In 33m rolls.

11-866-5Roll/3.00
Case of 12 rolls/31.80

Two-Roll Tape Dispenser

For use with 11-866 series and 11-866-5 tapes. Holds either one roll of tape up to 50mmW or 2 rolls up to 22mmW. Gray metal construction with 76mm spool core.

11-865-6Ea/13.75
Case of 12/148.56

Pressure-Sensitive Tape with 2 Adhesive Sides

Post It™ Strip provides a convenient way of posting announcements, identification data, and preparative procedures. One side adheres directly to walls, metal shelves, or most clean dry surfaces. Papers, notes, and sheets stick right to the other side. Use over and over again. Ideal for message boards around desk areas. 25mmW. In 5m rolls.

11-865-8Roll/1.90
Pack of 12 rolls/20.04

Transparent Acetate Film Tape

This tape protects labels on bottles, jars, tubes. Keeps labels clean and clearly readable. Also used for splicing, mending, laminating. Dimensionally stable up to 107°C. Resists degradation due to sunlight exposure, water, extended storage. Meets Fed Spec L-T-90c. 25mmW. In 66m rolls.

11-866-6Roll/3.55
Pack of 12 rolls/37.20

Teflon® Lab-Tape

Lubricates and forms gaskets. Produces long-lasting seals, joints, and connections. Conforms to any shape or configuration. Leakproof, non-freezing, self-lubricating, non-contaminating. Heat-resistant and chemically inert. For use on reaction flasks, bottles, bell jars, desiccators, thermometers, stirrers, anaerobic culture jars, freeze-dry and vacuum apparatus. L, 15m.

Complete Set of Precision Anschutz Thermometers

175mm long, 5-6mm dia with exceedingly small mercury bulb. Enclosed white glass scales; 1/5°C subdivisions. Higher range thermometers gas-filled. The ranges: -5° to +50°; 45° to 100°; 95° to 150°; 145° to 200°; 195° to 250°; 245° to 300°; 300° to 360°C. In leatherette-covered, velvet-lined case.

15-155Set/108.30

Replacement Thermometers

Range		Cat. No.	Ea
Low	High		
- 5°C	+ 50°C	15-165A	15.00
+45°	+100°	15-165B	21.00

Armor Cases

Protect thermometers

Armor cases and screw caps are seamless brass tubing with heavy nickel plating. To hold thermometer firmly in place, pack small wad of asbestos wool in bottom of case and in screw cap. Cases slightly longer than stated to allow room

-1°	+201°	1/5°	610	White	76	15-000C	17.80

Low Temperature Thermometers

Filled with red dyed alcohol (15-030, 15-035) or purple (15-038) for easy reading. Engraved stems. Accuracy high for unusually cold levels, but not comparable to normal range thermometers. Liquid in the 15-038 will begin to freeze at about -193°C, but only after 30-60min exposure.

Range		Subdiv	L	Immersion	Cat. No.	Ea
Low	High					
-50°C	+50°C	1°C	300mm	76mm	15-030	7.85

Large Diameter Angle Thermometer

Designed to be inserted through side of enclosed tanks, such as acid tanks. Range: 0° to 240°F. Enclosed paper scale with large markings. Body 31Lx1.9cm dia. Stem 15Lx0.95cm dia.
15-07528.50

Special Purpose Thermometers

15-169 Machine Thermometer

Measures temperature of motors, bearings, other machine parts. Flat bulb provides large contact surface. Range: -10° to $+150^{\circ}\text{C}$ with 1° subdiv. 150mmL.

15-16910.50

Surface Temperature Thermometers

Measure surface temperature of pipes, ducts, dies, molds, freezers, and ovens. 50mm dia dial with 2°F divisions. With magnetic clamp and silicone grease for holding thermometer in place.

Range		Cat. No.	Ea
Low	High		
-50°F	$+250^{\circ}\text{F}$	15-170A	14.00
0°	$+300^{\circ}$	15-170B	15.00
$+70^{\circ}$	$+370^{\circ}$	15-170C	14.00
$+50^{\circ}$	$+500^{\circ}$	15-170D	7.65

15-170

15-137 Cup Type Thermometer

For liquids in tanks, barrels, and tank cars. Range: -20° to $+220^{\circ}\text{F}$. When thermometer is lowered into liquid, cup scoops up small amount so temperature doesn't change before reading. Filled with easy-to-see red liquid; aluminum scale; brass cup; hardwood backing and handle, 32cm long; 41mm max dia.

15-13712.50

15-091 Fahrenheit Max/Min Thermometer

Registers both maximum and minimum temperatures. Range: -40°F to $+120^{\circ}\text{F}$, U-shaped . . . high temperature at top of one side, low at top of other side. Metal floats rise with mercury column; reset with magnet supplied. Plastic case; 250mm long over-all.

15-09117.00

Fisher Scientific Company

Centigrade Max/Min Thermometer

Same as 15-091 but with range from -40° to $+55^{\circ}\text{C}$.

15-09318.00

15-080A Metal Case Thermometer

With $\frac{1}{2}$ " iron pipe threaded connection for attaching to hot wells. Range is 30° to 240°F . Scale 152mm long; 32mm length below thread.

15-080A17.85

15-115 Thermometers in Wooden Cases

Enclosed in wooden case with handle for immersing or floating horizontally on liquid. Enclosed paper scale; large figures.

Range		L	Cat. No.	Ea
Low	High			
20°F	$+220^{\circ}\text{F}$	310mm	15-115A	8.75
0°	$+220^{\circ}$	432	15-115B	8.75

Emergent Stem Correction

Thermometer which has been calibrated for total immersion of mercury column can be used for partial immersion by applying following correction:

$$t_c = 0.000156L (t_o - t_e) + t_o$$

t_c = corrected temperature

L = length of emergent stem measured in scale degrees

t_o = observed temperature

t_e = average temperature of emergent mercury column

Correction is made by placing bulb of another thermometer at center of exposed mercury column and then taking temperature.

Special-Purpose Thermometers, Contd.

Safety-Coated with Teflon®

Precision grade. Yellow back. Completely sealed in inert, transparent coating of Teflon®. Cushions glass, prevents shattering. Safeguards against contamination. Retains glass and mercury in case of breakage. L 300mm. Over-all dia 6-7mm. For 76mm immersion.

Range		Subdiv	Cat. No.	Ea

Floating Thermometer

For dairies — churning, cheese, scalding temperatures marked on enclosed paper scale. All glass. Range: -20° to +220°F. 280mmL. FISHERbrand®.
15-105.....4.50

For Incubators and Ovens

With red line at 37½°C. Range: 0° to 80°C; 1° subdivisions. Over-all 250mm; 90mm immersion.

15-114 10.00

Metal-Cased Thermometer

Enclosed in stainless-steel case. Metal scale with large figures. Ring at top. 310mm long, without ring.

Range		Sub-div	Cat. No.	Ea
Low	High			
-40°F	+120°F	2°F	15-120A	13.00
0°	+240°	2°	15-120B	14.00

For Hot Bed Soil Tests

Thermometer has strong pointed metal end . . . easy to plunge into soil. Range: 20° to 180°F. Oxidized metal scale has white-filled markings. Wood case and handle. 355mmL.

14-331-12 16.50

For Koppers Coke Test

70° to 120°C range with 1/10° subdiv. Scale begins 90-100mm above bottom of bulb. 450mm long.

6-980 18.75

Short Thermometer

0°-100°C thermometer, lens front. Mercury-filled, accurate to ±1°C, for use with manual compensators. Length 158mm; immersion, 13mm.

13-640-280 11.50

Heidenhain Cryoscope Thermometer

For osmotic pressure and molecular weight. As accurate as Beckman type thermometer but much easier to use. Enclosed milk-glass scale.

Wall and Window Thermometers

Indoor/Outdoor Wall Thermometers

For -40° to +120°F. White aluminum back; black markings. 215mmL.

15-127.....3.29

Window Thermometer

For -70° to +120°F. White aluminum scale with clear numbers. Non-rusting aluminum bracket.

15-131.....3.29

Differential Thermometers

15-044

15-060

Ideal for viscosity readings, calorimetric tests, freezing and boiling points requiring high measuring accuracy within a 5° range.

Adjust to any 5° range within specified operating range with auxiliary scale and mercury reservoir.

–35° to +300°C Model

Reads Upward

Lens front magnifies mercury; read directly to 0.01°C; estimate to 0.001°C. Auxiliary scale and mercury reservoir on top. Yellow back. Etched stem. 508mmL. Immersion, 165mm.

15-04480.00

Beckman Differential

ASTM 115C . . . –10° to +140°C
... reads upward. Range covers

5°C in 0.01°C divisions. Auxiliary scale in 2° divisions with dropping chamber below. Milk-white differential scale sealed in thermometer. Nickel-plated cap with ring. Total length, 559mm.

15-06082.75

–30° to +50°C Model

Reads Downward

Auxiliary scale in 1° divisions. Ideal for freezing points. Otherwise, same as 15-060.

15-06182.75

Recording Thermometers

Record temperatures hour by hour

Recording thermometers monitor experimental rooms, controlled environments, air conditioning, and refrigeration equipment. Permanent record of highest and lowest temperatures, their duration, and fluctuations in between.

7-Day . . . 20° to 120°F Range

Spring-driven jeweled 7-day clock. Chart divided into days with 2hr and 1°F subdivisions. Recording pen connected directly to bimetallic sensing coil. Gray enamel metal case. 11Lx25Wx16cmH. With 52 charts and ink.

15-073B320.00

Replacement Charts. For 15-073B.

15-073-5BPk of 52/9.95

Automatic 7-Day . . . –40° to +120°F Range

Weather-Hawk allows remote readings with 2.4m tubing connected to sensing bulb. Electric drive clock. Strip chart divided into days, with 2hr and 2°F subdivisions. Zones of 20°C are color-coded. Black plastic case. 18Lx33Wx18cmH. 115V 60Hz. With 52 charts and ink.

15-074125.00

Replacement Charts. For 15-074.

15-074-10Box of 52/9.95

7-Day . . . 40° to 100°F Range

Chart (144mm dia) in 7-day segments with

3hr and 2°F subdivisions. Bimetallic element attached to pen arm with ½°F response. Spring-wound chart clock, 7 days per winding. Molded plastic case. 11Lx14Wx19cmH. With 100 charts and ink.

15-071103.60

Replacement Charts. For 15-071.

15-071-5Box of 100/5.00

24-Hour . . . 70° to 130°F Range

Chart with 15min and 2°F subdivisions. Otherwise, same as 15-071.

15-072103.60

Replacement Charts. For 15-072.

15-072-5Box of 100/5.00

ASTM Thermometers — A Summary

Following is a summary of ASTM thermometers described in this catalog. Thermometers are listed throughout the catalog on the pages indicated in table.

ASTM thermometers made and guaranteed to meet ASTM E1 specs in every detail. The tubing used to make ASTM thermometers conforms to exacting specifications for composition and physical properties.

Graduations, numbers, and letters are deeply etched into the glass and filled with improved black or red pigments which are unaffected by any ordinary solvent.

All ASTM thermometers are filled above the mercury column with an inert gas under pressure.

ASTM No.	Cat. No.	Thermometer	Range	Subdivisions	Immersion	Described on Page No.
1C	15-166A	Partial Immersion	-20° to +150°C	1°C	76mm	1166
1F	15-167A	Partial Immersion	0° to 302°F	2°F	76	1166
2C	15-166B	Partial Immersion	-5° to +300°C	1°C	76	1166
2F	15-167B	Partial Immersion	20° to 580°F	2°F	76	1166

Temperature Indicating Crayons

Show excessive temperature at a glance

Each Tempilstik® has a specified melting point. Simply mark object with crayon . . . mark melts (looks shiny) as soon as temperature rating is reached or exceeded. Accuracy within 1% of stated value.

If object is too smooth to hold crayon mark, just touch it with Tempilstik periodically and note if it melts.

Crayons come in adjustable aluminum holders with pocket clip, labeled with melting point in both Fahrenheit and Centigrade.

Melting Point	Cat. No.	Ea	Melting Point	Cat. No.	Ea

YSI Electronic Tele-Thermometers

Output signals for recording . . . Battery-powered for field or lab . . . Models for 1, 6, or 12 probes

15-176-5

Model 42: Single Probe Input

3 overlapping temperature scales. Powered by two 6.75V mercury cells. Recorder output: 0 to 120mV. Plug probe into front of unit. Select temperature range. Immerse probe tip into sample. Read temperature directly from meter. Dimensions: 11Lx16Wx16cmH.

Range	Accuracy	Readability	Cat. No.	Ea
-40° to +150°C	±0.5°C	±0.2°C	15-176-5SC	230.00
-40° to +302°F	±1.0°F	±0.25°F	15-176-5SF	230.00

15-176

Model 43: Single Probe Input

Single F/C scale. Powered by one 1.5V "D" cell. Recorder output: 0-100mV. Dimensions: 9Lx19Wx12cmH.

Range	Accuracy	Readability	Cat. No.	Ea
+20° to +42°C, +68° to +108°F	±0.2°C	±0.1°C	15-176A	150.00
+15° to +100°C, +59° to +212°F	±0.8°C	±0.4°C	15-176C	150.00
0° to +50°C, +32° to +122°F	±0.5°C	±0.2°C	15-176D	150.00

15-176-10

Model 44: 12 Probe Input

Single F/C scale. Inputs switch-selected. Any of the 12 probes plugged into front of unit can be individually selected. Temperature read directly from meter simply by turning selector switch. Powered by one 1.5V "D" cell. Recorder output: 0-100mV. Dimensions: 16Lx22Wx16cmH.

Range	Accuracy	Readability	Cat. No.	Ea
0° to +50°C, +32° to +122°F	±0.5°C	±0.2°C	15-176-10D	250.00

Probes, see p 1171.

15-176-21

Model 46: 6 Probe Input

5 overlapping temperature scales. Probes and scales switch-selected. Full-scale meter deflection only 11° for high readability and accuracy. High linearity (±0.03°C; ±0.05°F) for accurate readings from linear recorder charts. Powered by one 6.75V mercury cell. Recorder output: 0-80mV. Dimensions: 16Lx22Wx16cmH.

Range	Accuracy	Readability	Cat. No.	Ea
0° to +51°C	±0.15°C	±.05°C	15-176-21	485.00

YSI Thermistemp Controllers

Controllers operate with a YSI thermistor probe as one leg of an AC bridge. As probe senses temperature other than control temperature, bridge unbalance occurs. A signal from the solid-state amplifier operates relay that actuates heater or cooler to return temperature to set point.

Model 71A: Range -10° to $+120^{\circ}\text{C}$

Accurate to $\pm 0.5^{\circ}\text{C}$. Easy-to-read digital controls. Excellent sensitivity to temperature change: 0.03°C (below 30°C); 0.1° (from 30° to 90°); 0.2° (above 90°).

Relay contacts operate heaters, cooling devices, alarms, solenoids, motors, etc. Red and white panel lights indicate "cool" or "heat" mode. Convenience outlet for auxiliary equipment. Operates from -25° to $+50^{\circ}\text{C}$ using Series 400 probes. -80° to $+260^{\circ}\text{C}$ with Series 600 probes. 18Lx25Wx11cmH. For 117V 50/60Hz.

15-176-76375.00

See probes, p 1171.

Model 63RC: Range -70° to $+260^{\circ}\text{C}$

Set control point with external reference. A highly economical and reliable controller. Coarse and fine controls calibrated in arbitrary units, external reference required for calibration. Sensitivity to temperature change: better than $\pm 0.05^{\circ}\text{C}$. Operates from -20° to $+50^{\circ}$. Use Series 600 probes. 23Lx11Wx7cmH. For 117V 50/60Hz.

15-176-81125.00

See probes, p 1171.

Model 74: Range -10° to $+80^{\circ}\text{C}$

Accurate to $\pm 1.0^{\circ}\text{C}$. Temperature set on dials calibrated in 10's, units, and $1/100^{\circ}\text{C}$. Sensitivity to temperature change: 0.05°C below 45° ; 0.1° above 45° . Use Series 400 probes (listed on p 1171). 16Lx22Wx9cmH. Otherwise, same as 15-176-76.

15-176-77260.00

See probes, page 1171

15-176-76

15-176-81

15-176-77

YSI Series 600 Probes

For Thermistemp Controller 15-176-76 and 15-176-81. 122cm high-temperature leads with spade lugs.

Temperature Range	Description	Cat. No.	Ea
0° to +250°F	Tubular with Fitting. Stainless-steel immersible probe with pipe plug fitting for temperature control in closed vessels and pipes. Fitting withstands 35kg/cm ² .	15-176-82	34.50
0° to +250°F	Air Temperature. Stainless-steel probe for control of air temperature in test rooms, incubators, ovens, gas streams, etc.	15-176-88	39.00
0° to +250°F	Tubular. Stainless-steel, immersible.	15-176-94	32.00
+200° to +500°F	Rugged-Duty Probe. Well suited for temperature control in liquids.	15-176-96	32.00

YSI Series 400 Probes

For Thermistemp Controllers 15-176-76 and 15-176-77. Also for all YSI Tele-Thermometers (p 1169). All interchangeable. 305cm probe leads standard. (Longer leads on special order.)

Description	Time Constant	Cat. No.	Ea
General Purpose. Esophageal or rectal temperature in humans and animals. Used with long leads for water temperatures. Often buried for sub-soil readings. Used for air where fast response is not required. Most rugged probe. Vinyl tip and lead. Usable to 100°C (212°F).	7.0 sec	15-176-22	18.50
Small Flexible Vinyl. Rectal temperatures of small animals. Esophageal temperatures of infants. Cuvet temperatures. Vinyl sheath and tip. Usable to 100°C (212°F).	3.2	15-176-24	32.00
Small Semi-Flexible Nylon. Frozen food package temperatures. Esophageal and rectal readings. Cuvet temperatures. Nylon with epoxy tip. Usable to 100°C (212°F).	1.4	15-176-31	34.50
"Banjo" Surface Temperature. Skin, oral, axillary, water bath, and flat surface temperatures. Excellent for many air temperature applications. Handle aids in probe use. Stainless steel. Usable to 150°C (300°F).	0.6	15-176-32	41.50
Attachable Surface Temperature. Tape on skin or flat surfaces. Good for heat loss and compression efficiency study of piping systems. Stainless-steel cup, epoxy-backed. Usable to 100°C (212°F).	1.1	15-176-34	27.50
Small Surface Temperature. Cuvet, water bath, leaf, and other surfaces. 610mm Teflon®-covered flexible wire. Stainless-steel disc with epoxy back. Can be autoclaved. Usable to 150°C (300°F). Probe head electrically insulated, connector not insulated. Detachable lead.	0.3	15-176-35	51.50
Small Surface Temperature. Similar to 15-176-35 but with non-detachable lead, non-autoclavable. Usable to 150°C (300°F).	0.3	15-176-48	40.00
Air Temperature. Test rooms, incubators, remote air readings, gas streams, etc. Stainless-steel cage around epoxy-encapsulated thermistor. Usable to 150°C (300°F).	0.6	15-176-30	34.50
Tubular. For rugged duty in liquid immersion. Fast response oral or rectal. Stainless steel, 4mm dia. Usable to 150°C (300°F).	3.4	15-176-26	30.00
Thin Tubular. Same as 15-176-26, except diameter is 3.2mm and probe is less rugged, but response is faster. Usable to 150°C (300°F).	2.5	15-176-28	34.50
Tubular with Fitting. For readings in pipes or closed vessels. Stainless steel. Fitting withstands 35kg/cm ² . Usable to 150°C (300°F).	3.4	15-176-36	38.00
Tubular-Glass. Chemically inert for liquid immersion use. Thermometric titration. Freezing point determination. PYREX® brand, 127mm long. Usable to 150°C (300°F).	4.2	15-176-38	37.00
Tubular-Pointed Metal. To pierce semi-solids such as meat, fruit, soil, tobacco, etc. Stainless steel. Usable to 150°C (300°F).	3.7	15-176-40	40.00

Fisher Proportional Temperature Controller

15-177-50

Controls temperature to $\pm 0.01^\circ\text{C}$

Settings reproducible to $\pm 0.02^\circ\text{C}$

For temperatures up to 250°C

The answer to close, reliable control for laboratory baths in viscosity measurements, thermometer calibration, enzymatic studies.

Maintains preset bath temperature by continuously changing amount of power fed to a single heater. Sensing device — a thermistor probe which detects smallest deviation around set point — plugs into phone jack on front panel. Resulting error-signal fed to silicon-controlled rectifier circuit . . . automatically increases or decreases power to heater to restore set temperature

Temperature constancy: to $\pm 0.01^\circ\text{C}$ when bath is adequately stirred. Only 0.01°C change produces 10% change in heater output. Fast response — 63% of probe's re-

sponse completed in less than 1 sec.

Coarse and fine control dials for setting control temperature. Reproducibility: $\pm 0.02^\circ\text{C}$.

With gain control, adjust range of variation to suit any combination of bath, liquid, stirrer speed, and heater wattage. Voltmeter (graduated 0-150) indicates voltage applied to heater at any moment.

Ordering Information: All solid-state electronics. No tubes or moving parts. Long-term reliability. Electronic switching action . . . no thermostat, thermoregulator, or relay contacts to wear or corrode.

Four grounded AC outlets on back of unit: 2 controlled outlets for heaters totalling 750w or

less; 2 convenience outlets for stirrers, no more than 750w. Main switch controls all four outlets.

Steel cabinet, enamel finish. 25Lx31W x14cmH. Wt, 5.3kg. Without probes.

15-177-50 600.00

Probes. Stainless steel; 31Lx0.6cm dia; 182cm cable; standard phone plug. Less than 1 sec time constant.

Range	Cat. No.	Ea
0° to 150°C	15-177-55	57.00
+80° to 250°	15-177-57	57.00

Indicating Controller

Measures and controls temperature

Temperature plus other electronically transducible variables (speed of rotation and travel, A-C power, pH, D-C mV values) all controlled by Fisher Indicating Controller. Mirrored 18cm scale calibrated for Type T, J, R, S, E, or K thermocouples, radiation pyrometers, tachometer magnetos, pH amplifiers. Scale graduated to 1150°C and 2100°F. Accuracy: 1% of full scale. Sensitivity: 15 ohms/mV. If thermocouple burns out or fails, controller shuts down system. For wall or panel mounting; 24Lx24Wx31cmH. 120 or

240V 50/60Hz. With 31cm Chromel-Alumel thermocouple and 3.6m extension lead wire.
13-917570.00

Chromel-Alumel Thermocouple. As supplied with 13-917.
13-917-510.00

Extension Lead Wire. As supplied with 13-917. L, 3.6m.
13-917-728.00

13-917

Stepless Input Controller

Attach to heating mantles and tapes, water baths, flask heaters. Thermolyne Stepless Input Controller regulates power to deliver set % of current flow from 5-100%.

Pilot light. Protecting fuse. Dial calibrated in % time. Size: 10Hx10cm dia. For 120V. With 3-wire line cord and plug.

13-931-1055.00

13-931-10

Handy tools for your lab . . . calipers that measure thickness, depth, ID and OD

12-120

12-122

Low-cost, high-precision calipers constructed of extremely hard polymeric plastic material. Easy to use. Just place jaws around tubing, test tube, or beaker for OD measurement. Inside for ID measurement. Around one side for thickness measurement, or place rod inside tank, spectrophotometer cell, or bore for depth measurement. Adjust thumb roller. Read results.

Two types available:

Vernier Caliper

Features 130mm scale with 0.1mm subdivisions. Plus 5" scale with 0.0001" subdivisions.

12-1208.60

Dial Caliper

Also measures up to 130mm. Equipped with cream colored dial graduated in 0.1mm increments. Dial is adjustable for zero settings and for differential measurements. Clear, sharp numerals and graduations permit estimations to at least half a division.

12-12215.20

Thermoregulators for Close Temperature Control

15-180-5

Mercury Type

0° to 220°F (−18° to +104°C) temperature range . . . FISHERbrand® RotoStat. High $\pm 0.02^\circ\text{F}$ sensitivity. Direct-reading scale indicates set control temperature at a glance. Control point set by raising and lowering electrode inside capillary. Adjust by turning magnetic collar. Tungsten contacts sealed in inert hydrogen under pressure to eliminate corrosion. Outer glass shell adds strength and shock resistance. Bayonet-type connection on head simplifies plugging into electrical or control circuits. Electronic relay 13-991-80 (p 1018) recommended. With 61cm lead wire.

15-180-589.50

15-180-15

Differential Range

Mercury . . . −25° to +500°F (−32° to +260°C) operating range plus 20°F differential range within selected operating range. FISHERbrand Roto-Stat ideal for controlling within very narrow limits. Excellent sensitivity: $\pm 0.005^\circ\text{F}$. Surplus mercury reservoir for changing differential range. Otherwise, same as 15-180-5. Use 13-991-80 electronic relay (p1018).

15-180-1589.50

15-180-10

Brass-Encased

Brass tubing encases thermoregulator from just below adjusting magnet to mercury bulb. Generous openings near bulb so sensitivity is unaffected. Added protection against breakage caused by stirrers, mixers, etc.

15-180-1010.00

15-178

Bimetallic Type

Controls air temperature −100° to +400°F (−74° to +204°C). Ideal for incubators, ovens, ducts, warming closets. Flanged head for mounting on flat surfaces. One full turn of screw at top changes temperature adjustment 80°F (27°C). Contact rating: 10amp with 115V or 5amp with 230V. About 9cm below flange head; 16mm dia. With 20cm lead wire.

15-17833.00

Therm-O-Watch Controller

Controls temperature, pressure, or liquid level

Attach Therm-O-Watch Controller to reaction thermometer to control endothermic reaction . . . distillation thermometer to control reflux timers . . . still pot thermometer to terminate distillation . . . manometer to sound pressure alarm . . . sight glass or probe to monitor liquid level.

Sensing head attached to thermometer or other apparatus by 3 clips. Middle clip senses liquid level . . . oscillator circuit detects capacitance change . . . actuates control relay in amplifier.

For 150°C lab thermometers, sensitivity is $\pm 0.25^\circ\text{C}$. Elongated thermometers with limited range give higher sensitivity. Oscillator circuitry in sensing head eliminates stray electrical fields.

15-180

Ordering Information: With 1.8m polyvinyl chloride insulated cable on sensing head; 3-wire grounded plug; two 3-way grounded outlets; two 1.5m line cords. For 115V 60Hz.

15-180255.00

15-445-25

Bimetallic Immersion

Needs no external control relays. Simply connect unit in series with heaters. Thermoregulator same as 15-179. With lead wires, pilot lamp, and Castalov® clamp for supporting thermoregulator

15-445-25170.00

15-180-18

Magnetic Micrometer

Mercury . . . -35° to $+300^{\circ}\text{C}$
range . . . Magnaset. Magnetic
micrometer adjustment for
changes as small as 0.005°C .
Accurate to 0.002°C under ideal
test conditions. Contacts sealed in
hydrogen to resist oxidation. Car-
ries 3mA at 110V. Over-all length,
34cm; body dia, 16mm. With cord.
15-180-18106.00

15-179

Bimetallic Immersion Type

For liquids -100° to $+600^{\circ}\text{F}$. (-73
to $+315^{\circ}\text{C}$). Graduated dial and
knob at top for adjusting control
temperature. All corrosion-
resistant stainless steel. Carries
10amp with 115V or 5amp with
230V. Immersion length, about
19cm; over-all length 23cm, ther-
moregulator dia, 16mm. With con-
nector.

15-179123.00

Fisher Scientific Company

6-650

Thermographic System

Maps surface temperature patterns

LixKit™ Thermographic System consists of cholesteric liquid crystals (packed in aerosol cans) that are highly sensitive to temperatures. When sprayed on surface, crystals produce pattern of iridescent colors (thermogram) according to temperature variations. Each color in pattern represents specific temperature — highest temperatures are shades of blue, lowest are shades of red, intermediate temperatures are green and yellow.

Four cans of crystals are in kit. Crystals are calibrated to different temperature ranges: 30° to 33°C , 31° to 34°C , 32° to 35°C , and 33° to 36°C . Aluminum color-temperature range probes (also supplied) let you estimate warmest temperature of test area . . . basis for selecting proper liquid crystal range to use.

Clean surface to be tested, spray on black base supplied in kit, then spray on liquid crystal. You can observe thermogram in few seconds . . . it's easily photographed with conventional equipment. Thermogram has temperature sensitivity of 0.1°C and spatial resolution of 254 lines/cm.

LixKit can be used in industry for observing stress patterns on parts of machinery undergoing tension, torsion, compression, or for locating hot and cool spots in motors. In medical field, it can be used directly on human and animal skin. Useful in clinics for breast examinations, evaluation of peripheral blood flow, vascular conditions, and inflammatory processes.

Ordering Information: LixKit comes with 4 aerosol cans (10g each), 2 cans of water soluble black base, disposable temperature range probes with holder.

6-65060.00

LixKit Accessories

Black Base Paint Only. As supplied with LixKit. Contains 70% ethyl alcohol. Water soluble. 120g can.

6-650-16.00

Coolant. For forced cooling on intact liquid crystal thermogram. In 6 oz (170g) aerosol cans.

6-650-23.00

LixKit Replacement Cans. Aerosol cans containing liquid crystal material. 10g each.

Temperature Range	Cat. No.	Ea

31° - 34°	6-650-3B	12.00
32° - 35°	6-650-3C	12.00
33° - 36°	6-650-3D	12.00

Stopwatches with 1/5 Second Divisions

For Simple Timing Applications

Large hand makes 1 revolution in 60 sec on dial subdivided in $\frac{1}{5}$ sec. Other hand records 0 to 30 min in 1 min intervals on small dial. Seven jewel lever movement is antimagnetic and shockprotected. Consecutive depressions of crown start, stop, and zero watch.

14-646.....73.50

Registers 60 Minutes in 1 Minute Intervals

Similar to 14-646 but with large central red hand and dial that registers up to 60 min. Thin black second hand makes 1 revolution in 60 sec on dial subdivided in $\frac{1}{5}$ sec. Seven jewel lever movement. Antimagnetic. Shock-protected. Black metal case. Watch starts, stops, and returns to zero by consecutive crown depressions.

14-647-1083.50

Special Time-Out for Interrupted Intervals

Same as 14-647-10 but with time-out. Seven jewel lever movement. Antimagnetic. Shock-protected. Start, stop, and restart by successive crown depressions. Return to zero by side pushbutton only when hands are at rest.

14-647-1588.50

Made to U.S. Government Specs

Functions same as 14-647-15. Central minute register increases legibility 85%. Fiber-shell case resists dust, corrosion, and erosion by acids. Permits safe, sure grip. Seven jewel lever movement. Antimagnetic. Shock-protected.

14-647-588.50

Rugged Fiber Shell Case

Resists dust, corrosion, and erosion by acids. Provides safe, sure grip. Very legible dial. White hand makes 1 revolution in 60 sec. Dial subdivided in $\frac{1}{5}$ sec. Small black hand records 0 to 30 min in 1 min intervals. Consecutive crown depressions start, stop, and zero watch.

14-647.....73.00

Stopwatches with 1/10 Second Divisions

Outstanding Legibility

Central orange sweep hand reads $\frac{1}{10}$ sec only on outside division. Yellow central hand reads seconds only from 0 to 60. Register window shows minutes from 0 to 12. Start, stop, and restart by successive crown depressions. Return to zero by side pushbutton only when hands are at rest. Interrupted intervals can be timed. Seven jewel lever movement. Antimagnetic. Shockprotected. Black metal case.

14-647-3887.50

0 to 10 Minute Central Register

Graduated in $\frac{1}{10}$ sec. Large black hand makes 1 revolution in 10 sec. Red central hand, graduated in 1 sec intervals, registers 0 to 10 min. Consecutive crown depressions start, stop, and zero watch. Seven jewel lever movement. Antimagnetic. Shockprotected.

14-647-2090.50

Seven Jewel Lever Movement

Antimagnetic. Shockprotected. Large hand makes 1 revolution in 30 sec with dial subdivided in $\frac{1}{10}$ sec. Small hand registers 0 to 15 min in $\frac{1}{2}$ min intervals. Consecutive crown depressions start, stop, and zero watch. Black metal case.

14-647-3375.50

Economical All-Purpose Stopwatch

Finest in its class. Color-coded pushbuttons — green for start, red for stop, black for return to zero position. Large hand makes 1 revolution in 30 sec and has dial subdivided in $\frac{1}{10}$ sec. Small hand registers 0 to 15 min at $\frac{1}{2}$ min intervals. Shockprotected. High impact, black plastic case.

14-647-2837.00

Stopwatches with 1/100 Minute Divisions

14-647-23

0 to 30 Minute Register

Large hand makes 1 revolution in 1 min. Small hand registers 0 to 30 min in 1 min intervals. Seven jewel lever movement. Antimagnetic. Shockprotected. Black metal case. Consecutive crown depressions start, stop, and zero watch.

14-647-2375.00

14-647-25

0 to 60 Minute Register

Graduated in $1/100$ min on decimal system. Large dial graduated in 0.01 min numbered at every 10 divisions. Red central dial graduated to 60 in 1 min intervals. Consecutive crown depressions start, stop, and zero watch. Black metal case.

14-647-2583.50

Economical Stopwatches in Chromed Metal Cases

14-647-50

With Unbreakable Mainspring

Large hand makes 1 revolution in 60 sec on dial subdivided in $1/5$ sec. Other hand records 0 to 30 min in 1 min intervals on small dial. Seven jewel pinlever movement. Shockprotected, antimagnetic. Unbreakable mainspring. Consecutive depressions of crown start, stop, and zero watch. In 2-piece chromed metal case

14-647-5039.00

14-647-52

For 1/10 Sec Accuracy

Ideal for timing applications where precision is required and measured time is below 15 min. Large hand makes 1 revolution in 30 sec on dial subdivided in $1/10$ sec. Small dial registers 0 to 15 min at $1/2$ min intervals. Seven jewel pinlever movement. Shockprotected, antimagnetic. Unbreakable mainspring. Consecutive depressions of crown start, stop, and zero watch. In 2-piece chromed metal case.

14-647-5240.00

14-647-54

With Central Minute Register

Large hand makes 1 revolution every 60 sec on dial subdivided in $1/5$ sec. Center black dial registers 0 to 60min in 1 min intervals. Doubles recording capacity. Seven jewel pinlever movement. Shockprotected, antimagnetic. Unbreakable mainspring. Consecutive depressions of crown start, stop, and restart watch. Return to zero by side pushbutton only when hands are at rest. In 2-piece chromed metal case.

14-647-5455.00

Electric Stopwatches With Direct Reading Counters

1/10 to 10,000 Seconds

0.0001 of a second accuracy. Easily reset to zero with knob control. For 115V 60Hz.

14-65388.00
(Precision 69230)

1/100 to 1000 Minutes

Same as 14-653 except in minute graduations. For 115V 60Hz.

14-653-588.00
(Precision 69235)

14-653

Fisher Watch/Guard™ Stopwatch Holder

14-651-5

Metal holder with large, broad bar release that can be tapped from any angle. Adjustable lock-bolt limits lever movement and prevents watch stem from being forced too far. Rubber fingers hold watch securely.

Removable plate mounts holder in horizontal or vertical position. Zinc-casting mechanism. Enamel finish. 7.6Wx15D x6cmH. Without stopwatch.

14-651-522.50

60 Minute Stopclock

Large second hand and small integrating hand. One second graduations. Spring wound.

14-656Ea/19.50
Case of 4/70.20

14-656

Electric Bench Stopclocks

1/100 Second Graduations

Sweep range from 0 to 1 sec in 0.01 sec graduations. Totals to 60 sec in 1 sec graduations. Start, stop, and reset functions performed through 3-position rocker switch or remote control cable. 2 sec max reset time. Accuracy ± 20 milliseconds.

Operates automatically or in connection with other controls through remote control socket. Three amp outlet permits equipment to be timed simultaneously. Plastic case with rubber feet. Sloping front. For 115V 60Hz. With remote control cable.

14-652-299.00

14-652-2

1/100 Minute Graduations

Same as 14-652-2 but with minute graduations. Sweep range from 0 to 1 min in .01 min graduations. Totals to 60 min in 1 min graduations. Accuracy ± 0.005 min. Max reset time, 3 sec. For 115V 60Hz.

14-652-599.00

FISHERbrand® Electric Wall Clock

Sweep second hand makes it an ideal lab timer. Synchronous motor movement. Needs no oiling, cleaning or regulating. 20cm dia dial. Bottom stem for setting hands. Chrome finish. For 115V 60Hz.

6-664Ea/17.50
Case of 10/157.00

6-664

Interval Timers

- Bell sounds at end of pre-selected interval
- Variety of graduated intervals

60 Minute

Dial graduated from 0 to 60sec in 1/2sec divisions. Front switch. Easily reset to zero with knob on back. Has second hand and minute hand. Powered by spring mechanism. Bell rings at end of cycle.

6-658Ea/24.50
Case of 6/139.50

15 Second to 2 Hour Intervals

Spring wound. Bell rings at end of time period. Side lever with hole for attachment to experiment. Top ring for suspending from hook. Metal case. 12Lx5.7Wx 5.7cmH.

6-661Ea/28.25
Case of 12/305.00

1/4 to 120 Minute Intervals

Spring wound. Outer dial graduated to 10min in 1/4min; inner dial to 120min. Hands are set to desired time when lever on back is depressed. Bell signals end of run. Plastic. 5.7Lx10Wx11cmH.

6-66027.50

60 Minute Interalarm Timer

Inexpensive timer adjustable from 0 to 60min in 1min divisions. Setting knob to desired time automatically winds interalarm. Use as timer or to mark elapsed time. Bell sounds at end of cycle. 7cm dia. Black finish. Easy-to-read numerals. Plastic case.

6-662-10Ea/10.00
Case of 12/108.00

Handy Pocket-Size Mini-Timer

Time settings from 1 to 60 min. Rings at end of timing cycle. Useful for chemical reactions, photographic work, titrations.

6-65912.60

Electric Time-Switches

Turn your appliances on or off

Turns Appliances Off Automatically

1 to 60 minute control. With electrical switch which opens automatically at end of run. Simply plug equipment into outlet on back of timer. For 110VAC, 15amp. UL and CSA approved.

6-663-5Ea/13.75

Case of 12/148.50

1 to 60 Minute Control

For controlling shakers, stirrers, heaters, centrifuges, ovens, mixers, pumps. Adjustable from 1 to 60min by rotating dial handle. Buzzer signals as dial reaches zero and appliance is automatically shut off. Baked enamel finish. For 115V 60Hz. Carries 13.3amp.

6-663.....29.50

Turns On Appliances Day or Night

For ovens, incubators, water baths, hot plates. 24 hour dial marked for noon and midnight, AM and PM. Time selection switch. Plastic case. 7Lx11Wx11cmH. For 120V 60Hz, 1800w load.

6-663-5023.75

Versatile 60 Minute Electric Timer

Use as elapsed time indicator, interval timer, or to turn electric apparatus on or off. Two separate outlet receptacles allow automatic switching of external appliances. One is controlled by toggle switch and makes or breaks circuits at zero. Other is independent of selector switch. Automatic buzzer alarm. 20cm dia white dial, divided into seconds, with large minute hand and small second hand. Inner circle of small red numerals for use as stop-clock. Carrying handle. Steel case. For 110V 60Hz, 750w load.

6-656Ea/43.50

Case of 6/247.95

24 Hour Dial with Day Omitting Device

Turns any electric circuit on or off at same time each day. ON operations can be skipped on selected days. Dial has 2 trippers which are set for desired turn-on or turn-off time in morning, afternoon, evening, or night divisions. Calendar wheel adjustable for operation on specific days of the week. Apparatus plug in back of receptacle plug. Steel case. For 115V 60Hz. Rated at 7.5amp, 850w load.

6-657Ea/35.00

Case of 6/189.00

Tissue Processor, see p 601.
Tissue Culture Supplies, see pp 620-643.

Microtimer with Remote Control

For exacting timer requirements of micro-motion study, physical and chemical tests, production and process engineering, instrument calibration. Adjustable from 0.001 to 10min. Black 20cm dial with aluminum numerals and 0.001min dial divisions. Quick start-stop from switch on timer or remote switch on cord. Manual reset of hands at zero. Adapter for mounting on camera tripod. For 110V 60Hz.

6-664-20Ea/55.00

Case of 6/313.50

Titralyzer® II Titration System from Fisher

Totally automated Modular design

Totally automated, trouble-free titration system holds up to 16 samples. Performs completely automatic titration on each. Prints out results directly to nearest 0.01ml of titrant used.

Revolutionary features of Titralyzer II

Proportional endpoint approach

Provides maximum accuracy in minimal time. Adjustable proportioning control lets you select exact point in titration at which proportioning begins.

Dual endpoint capacity

Two independent dials let you choose one or two separate endpoints respectively. Nothing to reset or record

Delay timers

Prevent false endpoint readings. Adjustable timers allow enough time for chemical reaction to be completed before final results are printed.

Continuous LED readout

Dispensed volume is continuously displayed to nearest 0.01ml on front panel of digital buret. Tape printout also provided.

Quick-change syringe assemblies

Change titrant without cumbersome dismantling, cleaning, and flushing of components.

Optional recorder or titration computer

Save hours of time. Eliminate routine calculation. See Accessories.

(Contd. on next page.)

**Complete Titralyzer® II
System Consists Of:**

- (1) Multi-Sampler**
Holds up to sixteen 200ml Berzelius beakers. Integral motor driven elevator assembly raises and lowers stirrer, titrant delivery tip, and electrodes into appropriate beaker.
- (2) Digital Buret**
Automatically dispenses titrant with precision of 0.005ml @ 1 sd. Dispensed volume is continuously displayed on large panel-mounted LED readout to nearest 0.01ml.
- (3) Electrometer Module**
Full expanded-scale capabilities (see specs). Provisions for both manual and automatic temperature compensation.
- (4) Demand Module**
Contains all necessary controls for establishing desired titration parameters: pH or mV mode, one or two endpoints, proportioning band, minimum rate of delivery.
- (5) Control Module**
Maintains over-all control of various components of system: indexes samples into position in Multi-Sampler; raises and lowers electrodes at appropriate times; directs digital buret to dispense titrant and activates printer.
- (6) Printer**
Automatically prints results in sequential form on continuous paper tape. Including sample ID number, initial pH or mV value, final pH or mV value, titrant volume to nearest 0.01ml.

Ordering Information: Consists of 9-313-112 Multi-Sampler, 9-313-110 Digital Buret, 9-313-114 System Controller (electrometer, demand, control and printing modules in metal case housing). Also includes 13-639-64 reference electrode with 1.5m cable, 13-639-4 glass electrode with 1.5m cable, 9-319-55 stirrer rod, 9-319-116 delivery tip, 2-545B twenty-four Berzelius beakers (200ml), and instruction manual.

For 120V, 50/60Hz.

Performance Characteristics of Titralyzer II

Digital Buret

Buret capacity:	10, 25, and 50ml (with interchangeable syringe assemblies)
Volume dispense accuracy:	±0.01ml nominal
Volume dispense precision:	0.005ml @ 1 sd
Volume dispense rates:	10, 20 or 100% of buret capacity per min (under manual control)
Readout resolution:	0.01ml

Electrometer Module

pH	mV
0-14 full scale	-1000 to +1000mV
any 10 pH units full scale	-500 to +500mV
any 7 pH units full scale	-100 to +100mV
any 2 pH units full scale	
Manual temperature compensation:	0-100°C
Automatic temperature compensation:	Add 13-637-13 accessory temperature probe

Demand Module

pH range:	0-14 pH
pH resolution:	0.01 pH
mV range:	±1000mV
Readout sensitivity:	±1 mV

For more information about Titralyzer II system, check no. 12 on reader service card at end of blue index pages.

Automated Single-Station Fisher Titrimeter® II

9-313-10

Reasonably priced modular automated titration system consists of: **(1)** Single-station Titrate Stirrer with provisions for holding both electrode and titrant delivery tip. **(2)** Direct reading Digital Buret — automatically dispenses titrant with precision of 0.005ml @ 1 sd. Displays volume dispensed on large panel-mounted LED readout to nearest 0.01ml. **(3)** Electrometer Module — full expanded-scale capabilities (see specs on p 1187). Provisions for both manual and automatic temperature compensation. **(4)** Demand Module — contains all necessary controls for establishing desired titration parameters: pH or mV mode, one or two endpoints, proportioning band, minimum rate of delivery.

Note these outstanding features ...

Fully proportional endpoint approach. Minimizes overshoot — maintains speedy titration. Improves titration accuracy.

Dual digital endpoint settings run two consecutive titrations to two separate endpoints on same sample.

Deviation meter — allows operator to continuously monitor course of titration.

Continuous LED display — shows rate of titrate delivery for convenient monitoring of volume added.

Optional titration recorder — can be used to generate titration curves or to monitor titrant volume dispensed. See p 1188.

Ordering Information: System consists of 9-313-106 Titrate Stirrer, 9-313-110 Digital Buret, 9-313-100 Electrometer, and 9-313-102 Demand Module. Also includes 13-639-64 reference electrode with 1.5m cable, 13-639-4 glass electrode with 1.5m cable, 9-319-116 delivery tip, 9-311-9 stir bar, and instruction manual.

For 120V, 50/60Hz.

9-313-103595.00

For 240V, 50Hz.

9-313-113595.00

Manual Single-Station Fisher Titrimeter® II

Modular titration system designed by Fisher for precision analyses in labs having moderate titration workload. Manual Titrimeter II consists of expanded scale pH Electrometer, a direct-reading Digital Buret, and Titrate Stirrer.

Operation is simple . . . place prepared sample on titrate stirrer platform, adjust stirring speed and lower electrodes into sample. Dispense titrant by operating digital buret until desired mV or pH endpoint is

reached as indicated on electrometer display meter. Final result (volume titrant dispensed) is indicated to nearest 0.01ml on digital LED display.

Outstanding accuracy of Digital Buret and expanded scale capabilities of Electrometer provide Titrimeter II with accuracy far surpassing any other manual system available. Check the specs on page 1187.

Ordering Information: System consists of 9-313-106 Titrate Stirrer, 9-313-110 Digital Buret, and 9-313-100 Electrometer. Also includes 9-639-64 reference electrode with 1.5m cable, 9-639-4 glass electrode with 1.5m cable, 9-319-116 delivery tip, 9-311-9 stir bar, and instruction manual.

For 120V, 50/60Hz.

Fisher's Automatic K-F Titrimeter® System

Adds proportional endpoint approach, digital readout, accuracy of better than 1% of value and pushbutton convenience to the classic Karl Fischer titration.

K-F Titrimeter incorporates the Model 394 Digital Buret — automatically dispenses titrant with precision of 0.005ml @ 1 sd. Amber-glass syringe assembly prevents photochemical reduction of Karl Fischer reagent. Dispensed volume is continuously displayed on large panel-mounted LED readout to nearest 0.01ml.

K-F Accessory module uses amperometric method of titration to detect endpoint electrometrically. Method measures current flow through solution with pair of platinum electrodes connected in circuit with microammeter and DC voltage source. Current Adjust dial on the K-F Accessory lets you control polarization current (0 to 1.3 VDC). Reference Button provides an instant check-up or lets you return to any previously determined current level.

Unique solid-state fully proportional titrant delivery circuit controls endpoint approach. Minimum delivery dial allows you to stop proportioning process at chosen incremental delivery rate. Assures maximum accuracy in minimal amount of time.

Solid-state endpoint timer, adjustable from 1 to 100 sec, maintains endpoint for pre-selected time period . . . eliminates false endpoint readings.

Built-in dry air purge pump limits moisture entry into system. Single pushbutton activates integral pump valves to deliver solvent

or drain reaction vessel. System is airtight — no risk of hazardous vapors escaping.

Titration cell is an easily replaceable low-cost screw-cap jar. Versatile sampling port accepts all sample types . . . liquids, solids, or gases. Unit also contains variable speed magnetic stirrer.

Ordering Information: System includes: Digital Buret, K-F Accessory, reagent bottle, reaction vessel, electrode, drying tube, 454g Drierite, and tubing. Dimensions of Digital Buret: 24Lx17Wx44cmH; K-F Accessory: 32Lx37Wx38cmH.

Fisher's Manual K-F Titrimeter®

Handle Karl Fischer determinations with liquid, gas, or solid samples

System consists of microammeter, built-in magnetic stirrer and controls for stirrer speed and polarizing current potentiometer. Flexaframe® rod attached to rear of instrument supports clamp and two 25-ml burets. Buret range: 10 to 10,000 ppm with sensitivity of 5ppm.

System is kept totally moisture-tight with gasketed cover assembly, sealed caps, check valves and drying tubes. Hinged cover on reaction vessel allows for easy installation and removal. Sealed caps on water standard and titrant supply bottles have fittings for

attaching rubber atomizer bulbs to pressure-fill burets. Multi-functional cover assembly accepts liquids, gas, or solid samples.

Ordering Information: System includes all glassware, stirrer, electrode, buret filler, transfer lines, microammeter, and one 25-ml buret. Optional second buret and mounting parts available.

 Case of 6/63.30

Karl Fischer Reagent

Stable single solution formulated by Fisher Chemical Manufacturing Division. Minimum 5mg H₂O/ml titer. Shelf life: 2 years. Qt (946ml) bottle.

So-K-3Ea/16.20
 Case of 6/81.00

Karl Fischer Diluent

Mix in equal volumes with So-K-3 Karl Fischer Reagent to lower titer to 1/2 original value. Qt (946ml) bottle.

So-K-5Ea/9.20
 Case of 6/44.10

L/I Aquametry Apparatus For Karl Fischer Titrations

9-313-700

Labindustries (L/I) Aquametry Apparatus employs unique electrode with built-in microammeter to show endpoint of Karl Fischer moisture titrations. When meter needle enters brown zone, you read buret.

You can use apparatus to titrate water in liquid or solid samples, from 1ppm to 100%, with 1% accuracy and 0.5% reproducibility.

Platinum/platinum electrode pair measures conductivity of sample during titration. This increases until water has all reacted at endpoint. Meter is adjusted so that needle is in brown KF zone at this point.

Unique dual buret makes it possible to use same buret for all samples, from very low to very high water content. Top part of buret

reads to 1 ml in 0.01ml divisions, so you can read titrant volume to 0.005ml or less. Lower part reads to 25ml in 0.1ml divisions. Buret has three-way stopcock and connections for refilling directly from standard 1 qt (946ml) Karl Fischer reagent bottle.

Titration is performed in ordinary 4 oz (118ml) wide-mouth jars. Electrodes and burets are inserted through $\frac{1}{8}$ joints in screw cap.

Ordering Information: Ready to use, with titration stand; magnetic stirrer; dual buret and adapter; meter electrode; filling system; 3 drying tubes with indicating desiccant. For 115V 50/60Hz. It is 25Lx15Wx81cmH to top of buret. 9-313-700505.00

Precision Auto-Aquatator™

15-182-800

You can make automatic Karl Fischer titrations for water in liquids or solids with Precision Scientific Auto-Aquatator™. Results are reproducible to ± 0.025 ml of titrant used.

Auto-Aquatator titrates to preset conductometric endpoint. Platinum electrodes monitor conductivity of sample. Resulting current is shown on microammeter on which you set endpoint value. Titration stops when current reaches that point.

Sensing circuits also control 2 self-zeroing solenoid-operated 15ml automatic burets on titration stand with integral magnetic stirrer. You use one buret for Karl Fischer reagent, use other for back-titration with water-in-methanol, or for reagent with different titer. Both burets are operated with same controls; you use selector switch to choose one or other.

Use panel-mounted switch and pressure pump to fill burets with reagents from 1 pt (473ml) bottles in back of cabinet. Burets and bottles are protected from atmospheric moisture by drying tubes filled with desiccant.

All controls are on front of instrument. After you set endpoint and "transfer" point, instrument will stop feeding in titrant continuously and begin to add it in small pulses. Other controls adjust stirring rate and endpoint "hold" time (10 sec to

2 min). You can also override automatic operation and titrate samples manually.

Sealed titration vessel has molded EPT (ethylene-propylene tetramer) cover with ports for burets, electrodes, and sample introduction. (You can pour in sample, or install septum on glass tubing, insert tubing into port and inject it with syringe.) Humid air is pumped out of vessel before titration to increase accuracy. Titrant lines are Teflon®; air lines are Tygon.

Ordering Information: Comes as complete system with control unit and cabinet; magnetic stirrer; two 15ml automatic burets; PYREX® brand titration vessel with cover; and 1 pt (473ml) each of Karl Fischer reagent, Karl Fischer diluent, and water-in-methanol standard. It is 31Lx46Wx69cmH to top of burets, and operates on 115V 50/60Hz. Wt, 15.4kg

15-182-8001975.00
(Precision 68830)

Manual Aquatrator

If you don't make many Karl Fischer titrations, you can save with manually operated model of Aquatrator. You watch meter, stop titration when needle reaches preset endpoint. Operates on 115V 50/60Hz

15-182-820 995.00
(Precision 68810)

Luft[®] Model 77 Controller

- Precise, versatile automation for instruments/apparatus
- Near-computer performance at controller price

13-642-500

This electronic sensor-based programmable controller can automate wide variety of batch, sequential, and continuous operations in laboratories and plants. Controller will accept, directly or indirectly, input from any sensor or transducer (weight, temperature, pH, light intensity, etc.), and will drive any control element (solenoid valve, heater, servomotor, etc.).

Simple applications are handled in single step. Difficult ones are broken down into simple steps and handled sequentially or in parallel. This approach results in great flexibility in design, programming, and control of automated systems

Two set-points

Key to Luft Controller's performance is its patented "two set-point" design. Gives it ability to

bring system to pre-set control point, or hold it between pre-set limits, without overshoot.

To automate any process, plug into controller whatever "eyes" (sensors or transducers) are appropriate to job, and whatever "hands" (control mechanisms) will produce action you want. You show controller what you want it to do by setting its potentiometers against standards with aid of panel indicator lights.

By combining controller's two set-points and three control modes with suitable accessories (stepping switches, relays, motors, etc.), you can obtain virtually unlimited programming flexibility. In "rising" mode, input signal (temperature, pH, etc.) increases to control point. In "falling" mode, signal decreases to set-point. In "limiting" mode, controller holds system between two set-points

Turns pH meter into automatic titrator/pH-stat

Model 77 Controller can turn any pH meter with recorder output, into a fast, precise automatic titrator or pH-stat. Use automatic burets (next page) with solenoid valves to control flow of titrant.

Controller accepts input from electrodes to monitor pH or potential and detect endpoint. Two set-point design of Model 77 provides for a fast, accurate titration without the risk of overshoot. Titrant is delivered very rapidly until controller senses first pH setpoint. Titrant delivery is then slowed down until buret is shut off at endpoint.

Controller is sensitive to as little as ± 0.001 pH change. Integral 0-57sec delay timer postpones control termination after final set-point has been reached for given

Specifications

Input

Resistance0-1 megohm
Current 0-1 mA DC into 1000 ohms

Output

Two independent or interlocked control channels (line voltage; 5A each)

One peripheral channel (line voltage; 1A)

One reset channel (external switch for automatic reset, etc.)

Luft A-KF Titration Assembly

For automated Karl Fischers

Attach Luft Controller 13-642-500 to the A-KF Assembly and run automatic Karl Fischer titrations quickly, efficiently.

Reaction takes place in a 3-necked 400ml vessel. One port is for sample introduction and also holds a stopper/drying tube. The other ports hold platinum-platinum electrodes (connected to Controller) and two-channel solenoid valve assembly which regulates titrant flow rates.

Titration endpoint and anticipation point are set independently on Controller. Stopcock near bottom of reaction vessel permits inert gas purging of system.

Ordering Information: Consists of 13-642-522 titration vessel; 13-642-524 KF valve assembly and 13-642-530 operating coils; 13-642-520 KF electrode; 13-642-528 cable connector; 13-642-526 KF buret; and 13-642-518 drying tube. (Titration stand and stirrer in illustration not included.)

13-642-600396.00

Replacement Parts for A-KF Titration Assembly

KF Titration Vessel. Cylindrical 400ml flask with 3 $\frac{1}{8}$ necks to fit KF valve assembly, electrode, and drying tube. Has drain tube with Teflon®-plug stopcock.

13-642-52282.00

KF Valve Assembly. Has $\frac{1}{8}$ joint to fit titration vessel and ball-joint for Karl Fischer buret. Teflon®-plug stopcocks and solenoid valves control fast and slow delivery of Karl Fischer reagent. Use with 13-642-530 operating coils.

13-642-524150.00

Operating Coils, see 13-642-530 (preceding column).

Fisher Stabilized Karl Fischer Reagent is listed on p 1427 and in the Fisher Chemical Index.

Eudiometer Tube Electrodes

Demonstrate composition of water and other liquids by electrolysis. Collect evolved gases in graduated eudiometer measuring tubes.

Platinum Electrodes

18x6mm, sealed in glass tubes. Rubber stoppers fit eudiometers. Copper wire contacts.

9-460Pair/20.00

Carbon Electrodes

100mm long x 4.5mm dia. Copper wire contacts. Rubber stoppers.

9-465Pair/7.00

(Titration stand and stirrer not included.)

13-642-600

KF Electrode. Platinum-platinum electrode pair in glass mount that fits $\frac{1}{8}$ neck on titration vessel. Polarizing current supplied by Model 77 Controller.

13-642-52080.00

KF Cable Connector. Connects KF electrode to controller. Has variable 0-6V DC voltage selector shunt.

13-642-52818.00

KF Buret. Automatic-zero 10ml buret with 500ml reagent reservoir and Teflon®-plug stopcock. Bottom has ground-glass ball-joint to fit 13-642-524 KF valve assembly. (Without ball-joint clamp.)

13-642-52696.00

KF Drying Tube. $\frac{1}{8}$ joint fits sample port of titration vessel.

Fisher Cl Titrimeter[®] System

9-313-140

**The easy way to measure
free, total, and
combined chloride . . .
inexpensively**

Performs quantitative measurement of free, total, and combined chlorine as specified by the *APHA Water and Wastewater Manual*, 14th edition.

Less expensive, easier to run and more accurate than alternative methods of conductometric or potentiometric titrations. Our Cl Titrimeter is largely unaffected by the presence of oxidizing agents, temperature variations, and turbidity or color.

Supplied fully equipped and ready to use. Special-purpose metallic electrode has dual platinum plates within single polypropylene body. Design configuration correlates precisely with preset stirring speed for optimum current flow between plates during titration. Magnetic stirrer is built into sample beaker platform. Large, easy-to-read microammeter (0 to 20 μ amp) has rugged, frictionless, taut-band movement. 2ml glass pipet with 1/100ml subdivisions is easily filled from connected reservoir bottle. Convenient, labeled, 30ml dropper bottles for dispensing auxiliary solutions supplied.

Ordering Information: System includes 250ml beaker, delivery tip, platinum electrode, stirring bar, 3 labeled dropper bottles (pH4, pH7, potassium iodide), and titrant reservoir bottle.

For 120V, 50/60Hz, 0.5 amp.
9-313-140495.00

For 240V, 50/60Hz, 0.25 amp.

Fisher Safety Tongs

2-622

Fisher Safety Beaker Tongs

Grip beakers safely, securely in any situation. Especially handy for beakers grouped on hot surfaces. Fiberglass-covered jaws (7.6cm lower than hand-grip) reach down to grip beaker, but hand remains safely above surrounding glassware.

Squeeze hand-grip together, till jaws firmly grip beaker (any size from 100-2000ml). Then safely tip beaker, pour from it, carry it around. Your hand is a safe 15cm from beaker.

Stainless-steel jaws with fiberglass-sleeves. Die-cast aluminum hand-grip. Screw-adjustment for maximum opening. 33cm over-all length.

2-622.....21.25

10-063

Fisher Safety Flask Tongs

Essentially the same as 2-622, but modified to hold any Erlenmeyer, Florence, or round bottom flask taking No. 4 or larger stoppers. Stainless-steel jaws open to 11cm maximum. Over-all length 24cm.

10-063.....15.50

8-725

Fisher Safety Dish Tongs

Hold evaporating dishes from size 00A to 5, or similar vessels from 75 to 120mm diameter. All stainless steel.

8-725.....11.75

2-620

For 100-1500ml Beakers

Handle beakers, from 100-1500ml capacity, firmly in grip of Fisher Safety Beaker Tongs. Fiberglass-covered jaws. All stainless steel. 33cm long.

2-620.....8.00

10-062

Stainless-Steel Flask Tongs

Flasks can't slip when gripped by Fisher Flask Tongs. Erlenmeyer or Florence flasks taking Nos. 4 to 8 stoppers. All stainless steel.

10-062.....5.25

4-712

Fisher Casserole Tongs

Casserole handle held securely between V-shaped lower jaw and curved upper jaw. All stainless-steel Fisher Casserole Tongs hold casseroles, sizes 1-5.

4-712.....6.50

Crucible Tongs

Choice of metals

15-207

Jumbo Size

Ideal for grasping crucibles deep in furnace. Fabricated with integral forefinger and thumb openings. Handle extends into palm. Rustproof, non-corroding stainless steel. L, 53cm. Meets OSHA standards.

15-207Ea/9.00
Lot of 12, ea/8.10

15-193

Stainless Steel

Resists corrosion. 18-8 gauge stainless steel.

15-193Ea/4.00
Lot of 12, ea/3.60

15-210

Julian Style

For crucibles in muffle furnace. Nickel-plated steel. With curved ends and compressing guide. L, 56cm.

15-21012.00

15-205

With Platinum Shoes

For very high temperature work and contamination-free gripping surface. With hollow platinum shoes (weighing about 2.5g) for grasping crucibles. L, 25cm.

15-205120.00*

*Price varies with platinum market.

15-202

Pick-Up Tongs

Nickel-plated steel for hard-to-handle items. Ideal for student use. 21cmL and have 2.5cm stirrup jaws with teeth.

15-202Bag of 3/4.00
Pk of 12/12.00

15-208

For Muffle Furnace Work

Made of 7.9mm steel rod. Nickel-plated to resist corrosion. L, 51cm.

15-208Ea/15.00
Lot of 6, ea/13.50

15-186 thru 15-200

15-186 Stainless-Steel

Precision instrument joint. Tapered tips. L, 23cm.

15-18612.00

15-190 Nickel-Chromium

For Platinum Crucibles. 23cmL.

15-190Ea/6.00
Lot of 12, ea/5.40

15-195 Brass

23cmL.

15-195Ea/3.70
Lot of 12, ea/3.35

15-200 Cadmium-Plated

On steel. Resists rusts. 23cmL.

20	15-223-10D	2.25	24.30

15-222-40

Steel Drill Bits

Thirteen high-speed, steel drill bits in convenient metal case. From 1/16" to 1/4" in 1/64" increments. Case is sequentially marked with sizes for fast selection of bits.

15-222-40Set/12.26

15-223-50

Vise and Anvil

Clamp metal, pipe, or wood for working with combination vise and anvil. Sturdy iron with jaws and chill-hardened anvil. 6cm wide jaws open to 7.6cm. Vise clamps to table or bench. 2.3kg.

15-223-50Ea/10.25
Case of 3/27.75

15-224-10

Wedge-Shaped Hammer

Special tempered steel with hickory handle. Ideal for breaking ore. Weight 340g.

15-224-10Ea/8.50
Case of 6/45.90

Round File

Enlarge holes in corks with round file. 15cm cutting portion, bastard cut. Tapered shape.

15-223-2Ea/1.85
Pk of 12/20.00

15-223-2

1-346

Tongue Depressors

Absolutely tasteless. Adult size: 15Lx1.9cmW. Straight-grained smooth hardwood. Twelve individual boxes of 96 each per case. Minimum order, 1 case.

1-346Case/18.00

15-223

Metal File

Shape surface of metal specimens with flat, metal file. Cutting portion is bastard cut 15cm long.

15-223Ea/2.00
Pk of 12/21.60

14-290

Tinner's Shears

Cut sheet metal and wire. Tinner's shears, made of drop-forged steel, hardened and tempered. Have polished steel blades and ground handles with baked enamel finish. Adjustable bolt and nut. Cut length, 6.4cm; over-all length, 25cm.

14-290Ea/7.00
Pk of 6/37.80

15-227-2

Adjustable Pliers

Grip flat, round, square, or hex objects with adjustable pliers. Four separate tracks upon which jaws pivot allow expansion of grip to 27mm. Pliers have long plastic-coated handles for good leverage. Chrome-plated steel. Length 18cm.

15-227-24.95

15-227-10

Combination Pliers

Cut wire, adjust gas connections, nuts, and bolts with combination pliers. Strong, drop-forged steel, chromium-plated with plastic-coated handles. 15cm long.

15-227-102.85

15-227-20

Needle-Nose Pliers

For cutting wire or gripping objects in tight places use these needle-nose pliers. Drop-forged steel with sharp cutting edges, plastic-coated handles. 18cmL.

15-227-206.95

15-227-25

Side-Cutting Pliers

Grip objects firmly and cut heavier wire with side-cutting pliers. Drop-forged steel with flat nose and plastic-coated handles. 18cmL.

15-227-258.40

15-228-12

Open-End Wrenches

Loosen or tighten square and hex-headed nuts and bolts. Each wrench has two sizes. Set contains $\frac{3}{8}$ to $\frac{3}{4}$ " sizes: $\frac{3}{8} \times \frac{7}{16}$ ", $\frac{7}{16} \times \frac{1}{2}$ ", $\frac{1}{2} \times \frac{9}{16}$ ", $\frac{9}{16} \times \frac{5}{8}$ ", $\frac{5}{8} \times \frac{11}{16}$ ", and $\frac{5}{8} \times \frac{3}{4}$ ". Wrenches come in durable plastic pouch with a slot for each wrench. Pouch rolls up and ties for convenient carrying and storage, mounts on wall or board with integral hang-up grommets. Chromium-plated.

15-228-1221.00

15-229

Crescent Wrenches

Handle a variety of tightening jobs. Crescent wrenches adjust to fit square and hex-head nuts and bolts of many sizes. Strong drop-forged steel alloy. Chromium-plated with plastic-coated handle.

Fast Metric Conversions

English to metric or vice versa

Full function calculator

A full function calculator complete with memory. Instant, accurate answers for 126 types of metric conversions. Simply enter metric or U.S. units, press convert key, read exact answer with decimal point in place. Converts length, area, weight, volume, liquid measure, temperature.

As a calculator, it adds, subtracts, multiplies, divides. Has fully addressable memory and recall. Also: overflow indicator, % key, negative indicator, chain calculation capability, floating decimal, 8 digit logic, and bright LED display.

Ordering Information: With nickel-cadmium battery, 115V adapter and recharger, carrying case, and instructions. Wt, 0.16kg (5.5 oz). Size: 10x8cm.

12-09949.50

Tubing Stretcher

Stretch rubber tubing to fit. Durable stainless steel for long life.

Tygon® Flexible Plastic Tubing

From Norton, The "Tubing Professionals"

Demands made on laboratory tubing are far different from those made on tubing used in motorcycle fuel lines. Requirements of open-heart surgery are likewise different from those for food processing. Facing up to these facts, scientists at Norton's R&D labs discovered that they could modify their basic Tygon® formulation to provide just the right combination of characteristics for virtually any application.

Today, there are more than 200 Tygon tubing formulations, each with its particular "job-fitted" set of characteristics. Seven of these have such widespread use that

they are produced as "standard" tubings:

Application	Formulation No.
Chemical laboratories	R-3603
Clinical labs, surgical and hospital uses	S-50-HL
Food labs, food and milk product plants	B-44-4X
Beverages	B-44-3
Flexible, heavy-duty chemical plants	R-3400
Semi-rigid chemical plants	R-2400
Fuels and lubricants	F-4040

For your protection . . . the Tygon tubing brand

"Tygon" is a registered trade mark of Norton Company. When you specify "Tygon," you're getting the proper formulation for your application — every foot is branded with the name "Tygon" and formulation number.

Above: Norton laboratories, staffed with trained scientists to solve technical problems.

Right: Tygon R-3603 has become the "standard" laboratory tubing through the world.

Quality Assurance . . .

the most important ingredient

The satisfaction . . . indeed, the enthusiasm . . . of Tygon users is a result of highly-developed quality assurance methods which govern production of every foot of Tygon tubing.

All compounding takes place right in Norton's own plant under the control of quality assurance specialists.

Suppliers of raw materials are required to assign code numbers to every lot and to certify that it has been tested and found to meet

rigid specifications. Thereafter, samples are taken from each production lot of Tygon tubing for exhaustive laboratory checks.

Throughout the manufacturing process, each lot is accompanied by a production card with the code number of each ingredient. This accountability and traceability even carries through to the customer. Numbers on inspection slips, packed in every carton of Tygon tubing, are keyed to these production cards.

A

A gas chromatograph is used to check incoming plasticizers for impurities.

B

Determining mixing characteristics of a formulation.

C

Optical comparator used to check dimensional accuracy of extruded tubing.

D

E

D

Ingredients are formulated in this blender to ensure close control of materials from which Tygon tubing is made.

E

Chemical immersion tests evaluate resistance of various Tygon formulations to wide range of corrosives.

Tygon S-54-HL Micro-Bore Tubing

Implantable, non-toxic, non-pyrogenic. Compatible with blood. Autoclavable. Ideal for catheterization, intravenous and intra-arterial infusion. Stiff enough for easy manipulation and to eliminate danger of wall collapse. Soft enough to reduce puncturing problems. Meets USP Class VI criteria for absolute safety. Complies with Fed Spec L-T-790A Type I for medical applications. Durometer hardness (Shore A), 83.

14-170-15F42.40

Tygon Fluran® Tubing

For high temperatures

Fluorelastomeric tubing will stand up where other rubber-like tubings disintegrate. Near-universal corrosion-resistance to exotic fuels and solvents, aliphatic and aromatic hydrocarbons. Use at temperatures up to 222°C . . . or as low as -40°C. Good tensile strength (91.4kg/cm²) and good resistance to ozone, sunlight, and weathering. Black. Flexible. Durometer hardness (Shore A), 70.

(Contd. on next page.)

Tygon Tubing, Contd.

Tygon R-3603 Tubing

For critical lab procedures

Crystal clear, flexible tubing provides longer life and greater versatility than other plastic tubing. Non-toxic, non-contaminating. Non-aging, non-oxidizing. Odorless, tasteless. Won't harden, crack, or flake. Will handle virtually any chemical in the lab. Durometer hardness (Shore A), 55.

Dense, smooth bore provides good flow rates. Prevents interior build-up. Facilitates cleaning. Flexible at -28.8°C , brittle at -50°C . Resists dry heat to 93.3°C . Flex life 10 to 12 times greater than rubber.

Speeds and simplifies setups. Slips over tubulatures easily. Grips tightly to glass or metal. Bends readily to sharp radius curves. Widely used with peristaltic pumps. Complies with Fed Spec L-T-790A Type II for lab applications.

For food labs and processing plants

Safe, non-toxic, lightweight tubing. Complies with FDA requirements for materials which come into contact with edible products. Meets criteria of 3-A Plastics Standard for handling milk and milk products.

Won't affect taste or odor of products conveyed through it. Good wetting properties facilitate complete drainage. Permit simple flush-cleaning. Resistant to harsh alkaline cleaners. Remains equally unaffected by commercial sanitizers. Crystal clear for monitoring and controlling product flow. Smooth, dense bore won't trap bacteria-harboring particles. Durometer hardness (Shore A), 65.

Readily curved around corners and obstructions. Requires minimum number of couplings and fittings. Save up to 1/3 footage and labor as required to install rigid stainless-steel or glass tubing.

I.D.	O.D.	Wall Thickness	Cat. No.	Box of 15m

13 (1/2)	19 (3/4)	3.2 (1/8)	14-169-21D	53.75

Crystal clear Tygon tubing, with tough Dacron braid embedded within its wall. Provides working pressures about 4 times greater, size for size, than conventional Tygon tubing. Retains all of advantages of visual inspection and flow control. Tasteless, odorless. Flexibility remains virtually unchanged from that of regular Tygon tubing. Eliminates sanitation problems associated with tubing having exterior braiding. Meets FDA regulations and all criteria of 3-A Plastics Standard.

I.D.	O.D.	Wall Thickness	Cat. No.	Pk of 3m	Box of 30m
6.4mm (1/4")	9.5mm (3/8")	1.6mm (1/16")	14-169-20A	5.00	45.20

25 (1)	32 (1 1/4)	3.2 (1/8)	14-169-20F	26.15	237.50

Chemically inert Tygon R-3603 tubing with extra-heavy walls. Withstands full vacuum at normal room temperatures and up to 68.6cm of mercury vacuum at 60°C. Won't swell closed if vacuum pump oil should back up. Has higher density than rubber. Has low vapor pressure; maximum of 3×10^{-2} mm of mercury at 140°C, and 1×10^{-7} mm of mercury at 21°C. Won't affect results of analytic tests made on gases or vapors. Crystal clear. Suitable for use in making manometers.

Tygon S-50-HL Tubing

For clinical, surgical, and hospital use

Sparkling clear, flexible tubing especially developed to meet critical requirements of heart-lung machines and similar surgical apparatus. Safe, non-pyrogenic. Compatible with blood. Tasteless and odorless. Durometer hardness (Shore A), 64.

Dense, glass-smooth bore prevents interior buildup and provides good flow rates. Walls retain shape. Won't collapse to restrict solution flow. Easily sterilized by steam, chemical, or gas methods.

Documented animal implant and toxicity tests verify tubing meets USP Class VI criteria. Ideal for use with peristaltic pumps. Complies with Fed Spec L-T-790A Type I for medical applications.

Tubing ends closed by heat-sealing. Eliminates particle contamination during shipment and storage. With clear plastic overwrap.

Fisher MacMichael Viscosimeter

Measures viscosity continuously
Controlled stresses and rates of shear

15-346-500

Precise temperature control, reproducible rotation rates, standardized plungers, precise leveling, and easy-to-read scales make this one of the most useful, versatile viscosimeters available.

Recommended for water, chocolate, paint, glue, heavy oil, non-Newtonian fluids (such as plastics and dilatant materials), thixotropic and rheopexic materials. Total range, over a million centipoises.

In operation, plunger suspended on fixed length torsion wire is immersed to measured depth in sample liquid. Sample cup turned and heated by rotating hot plate. Plunger turns in same direction as cup due to viscous drag of liquid. When torque in suspension wire balances viscous drag, spindle stops turning.

Degree of turn is shown by fixed pointer on graduated disc that moves with spindle. Graduations

are degrees MacMichael (1°M is $1/300$ of a circle) — adequate for most quality control comparisons. By using suspension wires with known torsion resistance/ $^{\circ}\text{M}$, readings can be direct in centipoises. Readings reproducible to $\pm 1^{\circ}$ to 2°M .

Sample temperature held constant by water or oil bath enclosing sample cup. Thermostated hot-plate under outer cup responds to $\pm 1^{\circ}\text{F}$ ($\pm 0.5^{\circ}\text{C}$). Insulating cover over bath and sample cup.

Rotation speed factory set for 20rpm can be varied from 10 to 38rpm. Control knob graduated for reproducible settings.

To damp plunger oscillation at high rotation speeds, fill covered dashpot on spindle with oil or glycerin. Spirit level and 2 adjustable feet simplify leveling. Eliminates any chance of friction on spindle.

Plunger weights and dimensions are standardized for high reproducibility. With low viscosity liquids — use disc-shaped plunger. For most others, 1cm dia cylindrical plunger. And for very viscous samples, add auxiliary cylinders (2, 3, 4cm dia) to basic cylindrical plunger. All plungers are graduated for 1, 2, 3, and 4cm immersion. Highly polished hard-chromium plated.

Sample cup weight and dimensions also standardized. Small size — 3.02cm ID, 14 to 45ml capac; 6.98cm ID, 72 to 185ml capac. Made of highly polished spun aluminum.

Graded suspension wires with varying degrees of stiffness supply restoring torque on plungers. The more viscous the liquid, the stiffer the wire must be. If twisted too far, wire will no longer give usable results.

Wires are uniform length and specified dia: Brown & Sharpe gauges 18, 20, 22, 24, 26, 27, 28, 30, and 34. Two types: (1) Uncertified for routine use, especially relative measurements in $^{\circ}\text{M}$. (2) Certified wire with certificate stating torque in gram-cm that twists wire (plug spindle and plunger) 1°M .

Ordering Information:

23Lx33Wx56cmH. For 115V 50/60Hz. With 4 uncertified wires (B&S 22, 26, 30, and 34), 1 cm cylindrical plunger, disc plunger, large and small sample cups, instructions.

Accessories for MacMichael Viscosimeter

15-346-510

Outer Cup

Serves as constant temperature bath to maintain sample liquid temperature. As supplied with 15-346-500 viscosimeter.

15-346-51029.50

15-346-515

Large Sample Cup

Holds sample volumes 72 to 185ml. 3.49cm ID. As supplied with viscosimeter.

15-346-51550.50

15-346-520

Small Sample Cup

For 14 to 33ml samples. 1.51cm ID. As supplied with viscosimeter.

15-346-520105.00

15-346-525

Disc Plunger

Marked for 1, 2, 3, and 4cm sample depths. As supplied with viscosimeter.

15-346-52542.00

15-346-530

Cylindrical Plunger

Dia, 1cm. Marked for 1, 2, 3, and 4cm sample depths. Larger 15-346-535 plungers fit over outside. As supplied with viscosimeter.

15-346-53016.75

15-346-535

Auxiliary Cylindrical Plungers

Slip over outside of 15-346-530 to increase effective diameter, surface area, and weight.

Dia	Cat. No.	Ea
2cm	15-346-535A	49.50
3	15-346-535B	55.00
4	15-346-535C	72.00

Spindle

With graduated disc and dashpot. Supplied with viscosimeter.

15-346-54099.00

Cover

Reduces thermal loss from sample cups and bath. Bakelite™. Supplied with viscosimeter.

15-346-5506.25

Certified Wires

Each has certificate indicating torsion resistance in gram-cm/°M rotary deflection.

Petroleum Testing Viscosimeters. See pp 889-891.

Stormer Viscosimeters

Ideal for paints, silicates, greases, pyroxylin, tars, oils, starches

Basic Model

With cylindrical rotor

Operation: falling weight (adjustable to 160g) drives rotating cylinder immersed in sample. Time required for definite number of revolutions (revolution counter attached) at specific temperature is measure of viscosity. Convert to centipoises with calibration table.

Readings independent of specific gravity. Minimum friction. Bath and sample cup mounted to ensure correct centering of cylinder. With rotor, test cup, central baffle, thermometer (0° to 105°C) and thermometer holder, falling weight, dust cover, and instructions.

15-348.....408.00

Accessory Thermometer

+20° to +70°C in 0.2° divisions. ASTM 49C. Can be used in place of one supplied with 15-348.

15-348-114.00

ASTM D562 Viscosimeter

With paddle-type rotor

Stormer unit similar to 15-348 except it incorporates paddle-type rotor for greater reproducibility. For determining consistency of exterior house paints and enamel-type paints by ASTM D562 method. Add slotted weights for high viscosity paints. Just place standard 1pt (473ml) paint cans on movable shelf under rotor. With paddle-type rotor, thermometer, paint can shelf, slotted weights, and Krebs consistency chart.

15-348-12405.00

Standardized Viscosimeter

With paddle-type rotor

Same as 15-348-12, except calibrated by standard method of Krebs Pigment and Color Corporation to give readings which duplicate those of other standardized instruments.

15-348-14420.00

Paddle-Type Rotor

For 15-348-12 and 15-348-14.

15-348-12

Fisher Jet-Clean™

Completely Automatic Laboratory Glassware Washer

Every day, hundreds of test tubes, beakers, flasks, and pipets must be washed in every laboratory. Jet-Clean™ Washer comes to the rescue with its powerful washing action that scours all types of glassware squeaking clean. Its programmed controls allow "customized" wash cycles; its extra large baskets handle as many as 18,000 pieces of glassware each week. And its rugged construction minimizes maintenance problems. Jet-Clean is the ideal washer for any laboratory; clinical, educational, industrial.

Touch of one button starts Jet-Clean Washer on its 4-cycle operation — prewash, wash, rinse, final rinse provide sparkling clean glassware. Operates in each cycle for time period you preselect; heats wash water to temperature you wish; even dispenses exact amount of detergent. All automatically.

Totally New Washing Concept

Six individual control dials let you set automatic wash program to suit any washing need. Adjust time dials individually for exact time period you need for each cycle. Set cycles to "Off" for washer to skip cycle and proceed to next cycle. Place cycle on "Manual" for continuous operation in that cycle until dial is reset. On "Auto", washer automatically runs through cycle. Sequential light bars above control panel indicate which cycle washer is in.

After initial start up, water is heated in separate module. When wash cycle begins, hot water is pumped to wash chamber. Water is released by 139 pressurized, penetrating water jets on glassware in wash chamber's wash basket. Basket rotates at 12rpm for direct exposure of each piece of glassware to water jet action. During washing operation, hot, detergent-laden wash water is filtered and recirculated.

After each wash cycle, used water is flushed and drained automatically. Once emptied, water heating module refills and begins heating water for next wash cycle. After regular rinse, final rinse can use distilled or demineralized water from separate plumbing system.

Wash Any Kind of Glassware

From smallest test tube to container 46 dia x 51cmH, Jet-Clean can accommodate a variety of glassware in its standard Utility Wash Basket (15-352-530). If there are any odd-shaped items, Castaloy® clamps will hold them securely to wash basket. Special purpose accessory baskets are also available.

For Fisher Jet-Dri™ Glassware Dryer, see p 1216-1217.

Sequential light bars above control panel indicate which cycle washer is in at any moment. Also indicates power "On" or "Off" and lights up "Start" bar when wash water has reached proper temperature.

Ordering Information: Stainless-steel cabinet, wash chamber, jet-heads, door, plumbing lines. Three independent plumbing systems; water heating module refills and heats automatically; liquid detergent injected automatically; wash chamber with booster heater and vapor-steam baffle; final rinse module equipped for automatic refilling from pressurized or gravity supply; control module operates on 120V or 230V; wash water heating steam or electric; wash water automatically and completely drained after wash program. Thermally and acoustically insulated. Vapor and steam baffle to trap and condense vapors. One year parts warranty. 79Lx89W x165cmH. With 15-352-530 utility basket and 15-352-546 Jet-Clean detergent.

Labconco Automatic Washers

With 6 wash/dry cycles
For glassware and plasticware

97-980

No knobs to turn; no dials to read. Simple pushbutton controls. Just select cycle you want and push start button.

(1) Full Cycle:

Prewash, intermediate rinse, complete detergent wash, two room temperature rinses, final room temperature distilled water rinse, dry cycle. All in 59 min.

(2) High Temp/Full Cycle:

Same as Full Cycle, except final rinse is tap water heated to 74°C. In 59 min plus time required to raise final rinse temperature.

(3) Distilled Water Rinse Only Cycle:

To simply rinse handwashed glassware or brand new items. Time, 10 min.

(4) Wash and Tap Water Rinse Only Cycle:

For washing without distilled water rinse. Includes dry cycle. Takes 59 min.

(5) Plasticware Cycle:

Wash, two rinses, and dry cycle for plasticware or only slightly dirty glassware. Just 40 min.

(6) Dry Only Cycle:

For glassware washed and rinsed by hand. Hot air blower system dries glassware in 23 min.

To add forgotten piece of glassware during cycle: simply push safety lock to left . . . wait until internal action stops . . . open door and add forgotten piece. Close door and reset lock . . . washer continues cycle.

If you want to stop and drain washer completely, push "Cancel and Drain" button at any stage in any cycle. Then remove glassware or select another cycle.

Three-way washing action provides thorough cleaning. Two washing baskets slide right into washer directly above arms of H-shaped washing mechanism. Fast-moving streams of hot, detergent-activated water shoot through large spray ports in three directions: (1) upward through bottom basket, (2) upward through top basket, and (3) downward through bottom basket.

All stainless steel. Corrosion-resistant. Special sound-deadening insulation. With top and bottom basket. Eight different rack inserts are available.

Three Models

Available in permanent under-counter model, mobile model (can be converted to undercounter installation later), or free-standing model. With or without distilled water pump. 115V 60Hz.

*For labs where distilled water supply has at least 1.4kg/cm² line pressure

15-352-850

Thelco® Glassware Dryer

Dries glassware in 5 minutes . . . Pipets in 15 minutes or less

Handles up to 6 times capacity of comparable size gravity convection ovens and up to 3 times that of conventional mechanical convection ovens.

Load glassware onto dryer's perforated bottom plate and on stainless-steel wire shelf. Set timer from 0 to 60 minutes or place setting on "hold" to permit continuous operation. Set hydraulic thermos-

tat from ambient to 370°F (188°C). Incoming air passes through replaceable air filter, downward over heating banks, and is directed into drying chamber through side and bottom diffuser panels. After circulating through chamber, air is drawn through turbo-blower and portion is recirculated over heater and back through chamber. Remaining air volume is discharged continuously to exhaust stack to

ensure rapid removal of water vapor without waste of heat.

Ordering Information: Enameled steel exterior. Fiberglass 7.6cm thick around chamber. Stainless-steel chamber and ducts. Magnetic door, 4 adjustable support feet. Thermal overload protector ensures temperature not to exceed 370°F (188°C). Two 2800-watt

heater banks wound with nichrome ribbon. Exterior: 69Lx69Wx107cmH. Interior: 48Dx48Wx64cmH. Capac: Two standard 31Lx31cmW washer racks or 5 pipet racks. Area: 0.46m². With stainless-steel shelf, 4 stainless-steel shelf-support clips, terminal block. Shipping wt, 113kg (250 lb) 240V 60Hz. 25amp.

15-352-8501733.00
(Precision 31427)

Fisher Jet-Dri™

High-Velocity Forced-Draft Glassware Dryer

Model 550 Jet-Dri™ Glassware Dryer — the companion appliance to Jet-Clean™ Glassware Washer (pp 1212-1213). Perfect 2-unit system that provides total capability for processing dirty glassware in industrial, clinical, and educational labs. (Dryer can also be used separately as forced-draft oven.)

For optimum glassware washing/drying, synchronize Jet-Clean wash programs with Jet-Dri drying programs. Typical Jet-Clean cycle takes only 6¼min; typical Jet-Dri cycle is about 20min. Wash one basket per load in washer and place individual baskets of glassware into dryer every 6 to 7min up to 3 baskets. Fourth basket out of washer can then replace dried first basket which has

completed drying period in dryer. After initial cycle, a dry basket is removed from dryer and replaced by a wet basket from washer every 6 to 7min.

Choice of 4 operating modes. (1) Continuous Operation — for maintaining constantly full chamber of glassware. Recommended mode for processing glassware with Jet-Clean Washer. (2) Intermittent Operation — for occasionally drying of one or more baskets over 20min period. (3) Timed Operation with Cooling Period — for drying one or more baskets with up to 60min timed heat period followed by cooling with blower. (4) Blower Only Operation — to cool glassware any time during dryer operation.

By proper positioning of 2 supplied shelves, Jet-Dri holds up to 3 standard 15-352-530 utility glassware baskets used in Jet-Clean Washer. Shelves can be arranged on 9 dif-

ferent channel guides to accommodate 15 other types of Jet-Clean Washer baskets. (See page 1213 for description of other baskets.) Additional shelves can be ordered separately to increase dryer capacity when short baskets are used.

All operating controls are located above and beside drying chamber. Away from damaging water splashes and drips. Included are: 3-position power switch; temperature selector with arbitrary divisions from Low through 20; temperature indicator graduated in °C and °F; heat cycle selector used with Timed Operation for up to 60min of drying; and indicator lights.

Ordering Information: Stainless-steel cabinet with black control panel. Matches Jet-Clean Washer. Can be installed on bench-top, placed on floor, or positioned on 15-352-515 cabinet. Over-all dimensions: 57Lx91Wx37cmH.

Fiberglass insulated chamber. Chamber capacity, 0.26m³. Chamber dimensions, 51Dx56Wx91cmH. Low noise motor and blower. Door with silicone rubber gasket, adjustable hinges, and spring-loaded mechanical latch. Open-coil heater. Backup Safety Sentinel thermostat. Net wt, 123kg. Shipping wt, 150kg (330 lb). With 2 shelves and adjustable leveling feet.

Supports dryer and provides storage space. Stainless-steel exterior. With adjustable leveling feet.

15-352-515400.00

2.8 Liter Ultrasonic Cleaner

Scrubs electronic components, optical equipment, intricate glassware

15-337-15

Converts electrical energy to high frequency sound waves which create billions of minute bubbles in cleansing solution. Formation and collapsing of these bubbles produces scrubbing action on immersed parts. Cleaning action penetrates deep recesses, goes around corners, passes through barriers. Blasts away residues leaving clean surface.

Ordering Information:

Stainless-steel tank with lead zirconate titanate transducer. One simple on/off switch. Tank: 13Lx23Wx10cmH. Cabinet: 19Lx31Wx23cmH. 125 watts. 115V 60Hz.

Send for free Procedures Manual

Fisher's new *Water/Wastewater Procedures Manual* gives you:

- detailed instructions for running all the tests listed on pp 1222-1229.
- complete lists of equipment and reagents by test (including quantities and Fisher catalog number)
- a mini-catalog of the necessary

equipment and reagents

This manual is based on the 14th edition of *Standard Methods for the Examination of Water and Wastewater* and the EPA manual, *Methods for Chemical Analysis of Water and Wastes*. To get this manual, check no. 3 on reader service card at end of blue index pages.

Equipment and Reagents for Water/Wastewater Analysis

Your local Fisher branch maintains complete stocks of the equipment and reagents needed for water/wastewater analyses. Below, a handy chart of equipment and supplies recommended for the principal tests described in the 14th edition of *Standard Methods for the Examination of Water and Wastewater* and the EPA manual, *Methods for Chemical Analysis of Water and Wastes*.

Fisher Turbidimeters

Innovative improvements you'll find in ALL FIVE models

- Ultra-clear to highly turbid samples.

- Fisher Turbidimeters permit linear and direct-reading from 0.04 to 1000 NTU.

- Dilution of samples above 40 NTU is not necessary.

- Measurements are unaffected by noise, vibration, or line voltage fluctuations between 85 to 135V and 170 to 270V.

- Accuracy is independent of thermal variations and lamp aging.

- Cell can be pressured to 4.2kg/cm² to keep air in solution. Avoids bubbles which would distort readings.

Easy to clean and maintain

High velocity of flow through cell retards filming and prevents condensation on photocell and cuvet surfaces. Vial-type borosilicate glass thread-in cell (28mm OD) seals against O-ring in monitor head and can be removed in seconds if contamination or filming occurs. All solid-state electronic components. Precalibrated plug-in printed circuit modules make servicing fast and easy.

Stable reference standard provided

Permanent primary reference standard of near zero turbidity is supplied for verifying instrument calibration. Remains stable indefinitely. Standard has value of 0.12 to 0.16 FTU. For a quick calibration check, simply lift out the flow cell and insert the reference standard with no interruption to flow. Calibrations can also be verified against any value FTU solution without stopping flow.

Versatile

Standard features can be expanded to include additional ranges, control outputs, flow-through cuvet assembly, remote alarm monitors, and recorders. (Not all models accommodate all accessories.)

Unparalleled optical quality

Only the DRT measurement system offers true 90° nephelometry. Position of the lamp makes the difference. A horizontal light beam is passed through the liquid near the center of the cuvet. Reflected light is measured at resulting 90° angles. Unaffected by particle settling and flow rate variations. High velocity top in-flow, bottom out-flow system. A true improvement over conventional bottom to top measuring techniques.

Complete Ordering Information/Specifications, p 1232.

DRT-1000

DRT-1000 Turbidimeter

Does the work of 2 or 3 conventional units

Multi-range Fisher Model DRT-1000 converts instantly from on-stream monitoring, to grab sample measuring, to routine testing in the lab. Just lift flow cell assembly out of sample chamber and insert discrete-sample cuvet. Or move instrument easily from one in-line sampling location to another. No need to stop flow. A single unit replaces high and low range monitors and calibration unit.

Linear slide-out scales. Nine switching ranges provide linear readings from 0.01 to 1000 in Jackson turbidity units. A value on one scale can be confirmed on all others. For direct concentration readout, just slide in appropriate scale to convert readings to ppm. Note: JTU and Formazin turbidity units (FTU) and nephelometric units (NTU) are interchangeable.

Great for quality control monitor-

ing. Turbidimeter's output signal (0 to 10mV full scale) can be used as the stepless transmitter in automatic control systems. Or handy built-in alarm can be preset to signal high turbidity limits. Instrument automatically actuates alarm when preset quality is exceeded.

Measures turbidity and suspended solids. You can switch the DRT-1000 from nephelometry to relative transmittance measurement for determining suspended solids (SS) at levels as high as 10-15% by weight. Just calibrate a blank slide-in scale to read directly in ppm or other concentration units. Far more convenient than time-consuming gravimetric methods.

Complete with operational kit including leather accessory case, low value reference standard, flow-through cuvet assembly, grab sample cuvetts, and spare parts kit.

5 versatile models . . . all conform to EPA/APHA specifications

DRT-200 Turbidimeter

A new standard for waterworks

DRT-200 is another multi-range turbidity/suspended solids monitor. Handles on-stream monitoring and measures grab sample without interrupting flow. Separate monitor and indicator units. Liquid being tested is not exposed to air or dust conditions.

Replaceable scales. Nine switching ranges provide linear readings from 0.1 to 1000 NTU. Being linear in all ranges, the DRT-200 can be recalibrated to such other standards of measurement as silica, nephelos, and mg/liter suspended solids.

Continuous monitoring. An anodized aluminum, modular, dust-proof, splash-proof monitor continuously handles such industrial processes as waste treatment effluent, influent, and filter performance. The master indicator is housed separately in a compact steel housing to NEMA 12 and CSA-5 specifications. Recorder outputs 0 to 1mAmp; 0 to 1mV, 10mV, and 100mV; and 0-20ma selected by contacts on a terminal strip are included with the standard instrument. An optional, factory-fitted remote meter alarm is available.

Complete with reference standard, 1 cuvet, hood, continuous monitor with spare screw-in vial, and a unit to incorporate special meter scales.

DRT-200

DRT-100 Turbidimeter

Perfect for lab bench use

Fisher Model DRT-100 for individual samples (grab sampling) only. Six linear switching ranges for 0.1 to 1000 JTU. (Not adaptable for suspended solids measurement or continuous-flow monitoring.)

Complete with grab sample cuvetts, low value reference standard, and spare parts kit.

DRT-100

DRT-1000RU Turbidimeter

Remote monitoring, continuous flow

A version of the DRT-1000 recommended for monitoring continuous flow where severe dust conditions, moisture, or atmospheric contamination at sampling site necessitates locating control module in separate room. (Recommended if pressure-feeding of sample stream to the protected area is impractical.)

Separate monitor and indicator units. Flow cell, photodetector system, and a second NTU meter are contained in a sealed, dustproof, and waterproof fiberglass case. Connected to control unit by a 15m multi-conductor cable. Model DRT-1000RU with remote sensor attached.

Complete with fiberglass-enclosed remote monitor, complete operational kit as supplied with DRT-1000, and 50m of connecting multi-conductor cable.

DRT-1000RU

DRT-150 Portable Turbidimeter

Battery-operated model

Equipped for individual samples. (Flow-through cell assembly is available as an accessory.)

Nephelometric and transmittance ranges. Seven linear switching ranges for 0-1 to 0-1000 JTU. High range switch permits relative readings for turbidities above 1000 JTU. Seven transmittance ranges, relative units for laboratory calibration in ppm, % by weight, etc.

Up to 2000 tests between charges. Powered by rechargeable batteries for complete portability. Compact. Lightweight 0-10mV recorder output. Stand ardly equipped with case, batteries, and 120VAC charger.

Complete with self-contained operational kit including grab sample cuvetts, low value reference standard, and spare parts kit; rechargeable batteries; and battery charger.

DRT-150

Accessories for DRT Series Turbidimeters

Accessories for All Model Turbidimeters unless Otherwise Noted

Formazin Turbidity Units (FTU) Standard Kit. Contains 4000 FTU stock solution. Pyrogen-free distilled water with bacteriostat. Also included, seven selected cuvetts and instructions for making standard values of 1000, 500, 100, 50, 10, 5, 1 FTU.

15-393-270.00

Glass Vial Cuvet, only, for flow-through cuvet assembly. Complete with O-rings. For DRT-1000 only.

15-393-1015.00

Remote Meter Alarm Kit. Provides remote meter indication and remote alarm for on-stream systems. For DRT-1000 only.

15-393-12245.00

Reference Standard. 0.12 JTU.

13-393-2225.00

Reusable Cuvets. With hard tempered glass surface to resist surface scratching for grab samples.

15-393-4Box of 10/25.00

Low Range Cuvet. A 0.1 FTU optically selected precision cuvet.

15-393-6110.00

Stainless-Steel Cuvet Assembly. Flow-through cuvet assembly same as supplied with DRT-1000 except all fittings are stainless steel. For DRT-1000 only.

15-393-890.00

Brass Cuvet Assembly. Flow-through cuvet assembly same as supplied with DRT-1000 except all fittings are brass. For DRT-1000 only.

15-393-970.00

Converter Kit. 4 to 20mA for connecting DRT-1000 directly to process control equipment.

15-393-14375.00

Blank Meter Scales. Slide-out scales for user calibration in other units for special requirements.

15-393-16Pk of 3/15.00

Spare Lamp Source.

15-393-185.50

Light Shield.

15-393-2015.00

Instruction Manual. DRT-1000.

15-393-245.50

High Solids Range. Nine relative transmission ranges for lab calibration in ppm, % wts, etc. Factory-fitted only.

15-393-56100.00

Recorder Control Output. 4-20mA and 10-50mA.

15-393-5895.00

Remote Alarm Contacts. Dry contacts provided for remote alarm rated 115VAC 5amp 60Hz including adjustable control.

15-393-60135.00

Stilling Chamber. Complete with automatic air vent in closed system min .4kg/cm².

15-393-62180.00

Signal Damper. Provides 4 selectable damping ranges. Factory-fitted only.

15-393-6466.00

Blank Meter Scales. Special scales for use in standard meter for special discipline marking 0-50 division, mirrored.

15-393-665.50

Flow-Through Cuvet Assembly. For DRT-150 only. Offers continuous flow-through monitoring capabilities. Ideal for field use.

15-393-30300.00

Scale Expansion Kit. Allows full scale meter display of any turbidity value. With kit, full scale becomes 1.2 FTU.

15-393-32145.00

For your copy of complete bulletin describing Fisher Turbidimeters and accessories check no. 21 on reply card.

Fisher Dry-Bath Keeps Temperature Constant

Fisher Model 145 accommodates up to 4 or 8 different heating blocks holding tubes from 6 to 25mm dia. Aluminum blocks conduct heat evenly. Keep temperature constant. Because tubes stay completely dry, Dry-Bath minimizes clean-up problems.

Temperature control dial graduated from 25° to 125°C. The temperature you select stays constant to $\pm 0.1^\circ\text{C}$. Ideal for enzyme reactions, inactivation of sera, Rh studies, and cholesterol determinations.

11-715-100228.00

Interchangeable heating blocks add versatility

Black anodized aluminum alloy blocks for above system: Chemical resistant. With thermometer hole.

Hellige Turbidimeters

Two models:

8000-T for turbidity,
8000-TS for turbidity and sulfate

Simple to operate. No special training needed. No standardized turbidity suspensions. No calculations. Simply read value on dial on side of instrument and determine turbidity or sulfate content directly from appropriate calibration charts provided.

Turbidity range: 0 to 150ppm SiO₂. Sulfate content range: 0 to 100ppm, higher by dilution.

Instrument causes intensity of two beams of light from one opal glass lamp to coincide. One beam is reflected to illuminate turbid solution in tube from the side. Light is scattered upward by suspended particles and seen through ocular as outer portion of circular split field. Other beam passes through adjustable slit, is reflected up through light filter, mirror, and solution. This second beam appears in the ocular as center of circular split field. Turning dial on side of instrument regulates amount of light allowed through adjustable slit. Operator regulates dial until two portions of circular split field form one field of uniform intensity. Then reads value on dial and determines turbidity or sulfate content from calibration charts provided.

In light-tight black metal case. Can be used in lighted room. No distortion or shadows. 15Lx18Wx41cmH.

Ordering Information: Two models, both with 2 pre-calibrated opal glass bulbs, plunger, brush, stirring rod, dust cover, turbidimeter tube, and instructions.

Model 8000-T. Precalibrated for turbidity. Also includes calibration charts for 5 ranges: 0-1, 0-4, 0-15, 0-50, 0-150 Turbidity Units. 110-130VAC or DC.
15-376450.00

Model 8000-TS. Precalibrated for turbidity and sulfate. Also includes calibration charts for 4 ranges: 0-5, 0-15, 0-50, 0-100ppm sulfate; measuring cup; barium chloride crystals; salt-acid solution. 110-130VAC or DC.
15-376-10480.00

Accessories for Hellige Turbidimeters

Turbidimeter Tubes. For use with 15-376 and 15-376-10. Bottom plates polished, plano-parallel optical glass; eliminate distortion or shadows in transmitted beam.

Viewing Depth	Over-All H	Cat. No.	Ea
10mm	53mm	15-376-15A	34.00
20	63	15-376-15B	34.00
50	93	15-376-15C	34.00

Optical Glass Plunger. Replacement for 15-376 and 15-376-10. Provides standard sample depth. Optically polished plano-parallel surfaces.
15-376-2037.00

Uncalibrated Opal Glass Bulb. Each replacement must be calibrated. Calibration kits available on special order.
15-376-259.75

15-376-10

Jackson Candle Turbidimeter

For APHA visual method 214B

For ballpark estimates of turbidity of water as outlined in American Public Health Association's *Standard Methods for the Examination of Water and Wastewater*.

Base (A) is iron, black-enameled triangular support, with all other metal parts brass. Candle holder (B) has spring insert which always keeps candle at proper height. Metal turbidimeter tube (C), 18Hx3.2cmID, is finished in black nickel inside and outside to eliminate light reflection. Will accommodate a 25-cm graduated glass cylinder.

Simple to use. Light candle. Add sample slowly to graduated turbidimeter tube until image of candle just disappears from view. Remove 1% of sample and again approach endpoint carefully. Read height of sample on graduated cylinder. Determine turbidity in JTU's from APHA chart in *Standard Methods*.

Without cylinder and candles.

15-380123.00

Turbidimeter Tube

EXAX® brand. For use with 15-380. 25cm deep. Range, 100-5000 turbidity units. Fused white graduations.

15-385Pk of 1/11.25
 (Kimble 46450) Case of 6/60.78

Turbidimeter Tube

EXAX brand. For use with 15-380. 75cm deep. Range, 25-5000 turbidity units. Also dilution scale graduated to 400ml in 100ml divisions. Fused white graduations.

15-390Pk of 1/33.10
 (Kimble 46450) Case of 2/59.58

Turbidimeter Tube Guard

For use in 15-380 with 15-390 tubes.

15-39534.00

Paraffin Candles

Used on 15-380 turbidimeter. 108x19mm dia. For general lab use such as blowpipe analysis.

4-670Pk of 72/5.75

Bausch & Lomb Portable Test Kits

For water and wastewater analysis

SpectroKit™ Reagent System

Use for spectrophotometric and titration procedures
Based on APHA and EPA methods

Reliable, economical way to handle quantitative determinations. Glassware and all necessary reagents are included. Use simple spectrophotometer or titration procedure adapted from *Standard Methods for the Examination of Water and Wastewater* and *Methods for Chemical Analysis of Water and Wastes* (Environmental Protection Agency). Each kit includes step-by-step illustrated instructions.

Reagents are prepared under rigid controls to ensure accurate results. Auxiliary chemicals are included where needed for removal of common interferences.

Applications include:

Ecological Studies	Fish Culture
Potable Water	Sea Water
Wastewater Analysis	Cooling Towers
Boiler Treatment	Effluent Analysis

Reagents for photometric procedures are precalibrated for use with B&L Spectronic® 20 and Spectronic mini 20 spectrophotometers, using 1/2-inch (13-mm) test tubes or vials. A calibration curve for the Spectronic 20 spectrophotometer and meter scale overlay for the Spectronic mini 20 spectrophotometer

are supplied with each kit of this type. Standards available for most kits make it easy to prepare calibration curves for any B&L spectrophotometer as well as others.

Individual kits measure 21Lx11Wx4.4cmH and weigh less than a pound.

The 15-413-22 dissolved oxygen kit requires 15-413-80 BOD bottles in addition to the furnished glassware.

Accessories

BOD Bottles. 60ml. Required for 15-413-22 dissolved oxygen kit.

15-413-80Pk of 2/6.00
(BL 33-03-41)

Portable Lab Case. Includes field table, tray for 9 kits, and die-cut foam insert to support glassware.

15-413-8548.00

Reaction Vessels.

15-413-88Pk of 12/6.00
(BL 33-03-10)

Water Technology Manual

Bausch & Lomb. A convenient compilation of 16 easy-to-follow procedures for water and wastewater analysis, with much helpful background information. Many of the methods are directly adapted from EPA recommended procedures for effluent monitoring under NPDES permits.

Test Methods:

ammonia	lead	phenol
chlorine	mercury	phosphorus
copper	organic	silica
cyanide	nitrogen	sulfate
fluoride	nitrate	surfactants
iron	nitrite	

Ordering Information: Includes information on theory of methods and environmental significance of analyses. Reference sections cover basic spectrophotometry, laboratory practice, sampling technique, choice of cuvet size, and brief operating instructions for B&L spectrophotometers.

Durable. Looseleaf to allow additions.

Laboratory Reagent Systems

Prepared reagents and standards

15-413-52

The reagents and standards most commonly used in water quality testing. Packaged in laboratory-sized containers. Can be used with any spectrophotometer.

Liquid reagents packaged in 1-pt (473-ml) amber bottles to prevent decomposition;

powder in 100-cc containers with desiccant capsules and spoon for handling.

Each set of laboratory reagents includes method sheet, illustrated instructions, safety information, assistance with handling interference, and literature references to *Standard Methods*.

Aqua Tester

Determines low concentrations of chlorine, ammonia nitrogen, iron, orthophosphate

Hellige Aqua Tester distinguishes between very slight color differences. Determines lower concentrations than Pocket Comparators. Just match sample color with standard colors. Then read concentration printed on color disc. Interchangeable color discs are available for many types of determinations. (See chart, next page.)

Samples are placed in Nessler sample tubes with long viewing depth (200mm) to increase intensity of colors and produce distinct easy-to-see changes. The integral light source ensures reproducible results independent of time or weather. Prism and magnifying lens bring colors side-by-side in one field for mistake-proof comparisons.

Ordering Information: With 2 Nessler tubes and optical glass plungers; magnifying eyepiece; lamp bulb; plastic cover. Order color discs separately. For 110-125V.

15-398-400178.75

Nessler tube with fused-on optically polished plano-parallel bottom plate. Replacement. PYREX® brand glass. Use with 15-398-410 plunger.

15-398-40513.60

Plunger regulates sample depth in Nessler tubes.

15-398-41012.75

15-398-400

Interchangeable Color Discs for Aqua Tester

Optically standardized; unconditionally guaranteed never to fade or change color. 9 or 10 precision standards permanently mounted in plastic disc.

A complete line of Testing Outfits for special determinations are available on special order for use with the Aqua Tester: Aluminum, Chlorine (low range), Chromate, Copper, Fluoride, Nitrate Nitrogen, Nitrite Nitrogen, Silica, Dissolved Oxygen, Lead, Manganese, Polyphosphate, and Sulfide. Ask for details.

BOD Bottle for APHA water tests - See p 100.

Orion Water Fluoride System

Measure fluoride in water in just 2min. No distillations, calculations, weighing, or color change estimations. Accuracy better than 4% of reading over entire scale. Portable. Battery-powered. Great for field use.

Orion Model 409 Water Fluoride System uses specific-ion meter, fluoride electrode, and TISAB (Total Ionic Strength Adjustment Buffer) as prescribed by ASTM and USPH methods.

Read fluoride concentration direct from meter. Two scales; expanded 0.5 to 2ppm for fluoridated water. Normal 0.1 to 10ppm for background levels in unfluoridated water.

Ordering Information: With all equipment: meter, fluoride and reference electrodes, electrode holder, shorting strap, metering syringe, 1 and 2ppm standards, and TISAB.
15-410.....795.00

Standard, 1ppm, pt (473ml) bottle.
15-411.....10.60

15-412.....10.60

TISAB, gal (3.8 liters) bottle.
13-641-87315.00

15-410

Pocket Comparators

For quick, simple pH and chlorine tests

Put sample in two identical distortion-free tubes. Add indicator to one tube. Then simply revolve color discs (holds 9 or 10 standards) until sample matches color of standard. Note pH or chlorine content directly from disc. Sample and color standards are viewed simultaneously through magnifying prism.

Color discs are interchangeable for various pH and chlorine ranges.

Ordering Information: With two sample tubes. Order color discs separately. (See next page.)
15-398-100B.....60.00

Without magnifier: View sample and standards through two small windows on front of case.
15-398-100A.....30.00

15-398-100B

Low-Range Color Discs for N, N-Diethyl-p-Phenylenediamine (DPD) Procedure

For use with 15-398-100A and 15-398-100B pocket comparators. For determining chlorine content of municipal water treatment plants and swimming pools according to DPD Method 409F in 14th edition of *Standard Methods for Examination of Water and Wastewater*.

DPD method differentiates between com-

bined chlorine and free available form. Also faster than the Orthotolidine method. Requires no liquid reagents. More stable colors. Insures requisite amount of free chlorine in water supply.

With assortment of DPD tablets and stirring rod.

Standards	Cat. No.	Ea

Cresol Red-B	7.2-8.8	15-398-140M	14.00

Chlorine Color Disc

Recommended for determining free and residual chlorine in drinking water, sewage, industrial wastes; for slime control in cooling water systems, paper mills, etc. All with 2 oz (60ml) Orthotolidine reagent and graduated dropping pipet.

Range: 0.0 to 1.0ppm Cl. Includes standards for 0.0, 0.05, 0.1, 0.2, 0.3, 0.4, 0.5, 0.6, 0.8, 1.0ppm Cl.
15-398-16549.00

Range: 0.0 to 3.0ppm Cl. Color standards for: 0.0, 0.1, 0.2, 0.4, 0.6, 0.8, 1.0, 1.5, 2.0, and 3.0ppm Cl.
15-398-17049.00

Range: 0.0 to 10.0ppm Cl. For chlorine control in beverage bottling. Standards for: 0.0, 0.2, 0.5, 1.0, 2.0, 3.0, 4.0, 6.0, 8.0, 10.0ppm Cl.
15-398-17549.00

Assorted Range: Cl. Pick any 10 of the following chlorine color standards: 0.0, 0.05, 0.1, 0.2, 0.3, 0.4, 0.5, 0.6, 0.7, 0.8, 1.0, 1.2, 1.5, 1.6, 2.0, 2.4, 2.5, 2.8, 3.0, 3.5, 4.0, 4.5, 5.0, 6.0, 7.5, 8.0, 10.0, 15.0, and 20.0ppm Cl.
15-398-18069.00

Sample Tube. 13mm viewing depth. Graduated, 5 and 10ml. Replacement for 15-398-100A or B (p 1237).
15-398-1053.70

Carrying Case holds 15-398-100A or B Comparator (with or without magnifier) plus 6 color discs, 4 sample tubes, six 2 oz (60ml) indicator bottles with dropping pipets.
15-398-12552.00

Daylite Illuminator insures reproducible readings in spite of room light or weather. With Corning Daylite Blue filter. Inclined front panel supports Comparator at 45° angle for easy viewing. For 110-125V.
15-398-13056.00

Wide-Range pH Color Discs — pH 2.0 to 11.0. 10 standard glasses at 1.0pH intervals. With 2 oz (60ml) bottle Wide-Range Indicator and graduated dropping pipet.
15-398-15049.00

Assorted Wide-Range pH Color Discs — pick any 10 of the following color standards: 1.0, 2.0, 3.0, 4.0, 4.25, 4.5, 4.75, 5.0, 5.25, 5.5, 5.75, 6.0, 6.25, 6.5, 6.75, 7.0, 7.25, 7.5, 7.75, 8.0, 8.25, 8.5, 8.75, 9.0, 9.25, 9.5, 10.0, 11.0 pH. With 2 oz (60ml) bottle Wide-Range Indicator and graduated dropping pipet.
15-398-14569.00

Wide-Range Indicator Solution: pint (473ml).
15-398-16018.00

Coleman Mercury Analyzer

- Displays results in μg or %T
- Sensitivity equal to atomic absorption
- For water, air, food, soil, tissue, body fluids, metal, fertilizer

Compact self-contained unit quickly determines mercury in organic and inorganic solids and solutions, and in air. Results displayed in μg of mercury or %T on large easy-to-read meter. Sensitivity ($0.01\mu\text{gHg}$) equal or better than most sophisticated atomic absorption units. No skill needed for accurate reproducible results.

How it works: mercury in sample oxidized to mercuric ion with permanganate in nitric acid/sulfuric acid. Add hydroxylamine hydrochloride to remove excess permanganate. Add stannous chloride to reduce mercury to metallic form. Connect sample to analyzer . . . air bubbles through to carry mercury through absorption cell. Mercury lamp emission absorbed by vapor in proportion to mercury concentration. Results read on 15cm meter. Peak detection circuit holds needle at maximum till operator pushes reset button. Then ready to start next sample.

Meter switch allows selection of 0 to $9\mu\text{g}$, 0 to 100%T, or 0 to $0.28\mu\text{g}$ for greater readability and accuracy at lower mercury levels.

All-plastic absorbance cell with demountable plastic windows makes system easy to clean and inexpensive to repair. All solid-state plug-in electronic circuits. Unit is 32Lx29Wx19cmH.

Ordering Information: With built-in pump absorption cell with windows and gaskets, window and gasket set, mercury lamp, photo-detector tube; sample bottle with bubbler and connecting tubes; dust cover; operation manual; sample preparation procedures. Without reagents, tray, and dispensers. For 115/230V 50/60Hz.

Fisher Model 181 Electrocolorimeter™

Monitors color in effluent and wastewater

7-104

Suggested by the American Public Health Association for Method 204C in the 14th edition of *Standard Methods for the Examination of Water and Wastewater*.

System ensures that streams and industrial effluent meet APHA (American Public Health Association) color standards. System fea-

tures a dual-beam photoelectric photometer specifically developed for ADMI (American Dye Manufacturer's Institute) method.

See pp 200-201 for complete information and photographs

Portable Resistivity Meter

Great for field work

9-100

Portable, battery-operated meter. Measures resistivity of water from 0.1 to 5000ppm (as NaCl). In 4 expanded scales: 0-5, 0-50, 0-500, 0-5000. Automatic temperature compensation to 25°C with water from 4.4° to 93°C. Usable in brackish water or pure distilled or demineralized water with ionizable impurities as low as 1ppm. $\pm 10\%$ over-all accuracy of meter and cell.

Ideal for checking purity of distilled or demineralized water, checking membrane malfunctions in reverse osmosis systems, checking blow-down effectiveness and consumption of treatment chemicals in boiler water systems.

Convenient U-shaped sampling cell with molded handle. Cell can be dipped into solution to collect sample; water can be poured into cell from tap or container; or, for in-line measurements, cell can be connected to 13mm flexible tubing. Solid platinum and stainless-steel electrodes never need replatinizing.

Ordering Information: In 5.1Lx7.6Wx15cmH phenolic case. Cell is epoxy-encapsulated polypropylene. Solid-state circuitry. Meter and cell furnished as unit with two 9V batteries and 76cm cord for meter connection.

9-10095.00
(Barnstead PM-1)

Water-Testing Kits

Fast results without mixing reagents

No burets or droppers

Each CHEMet® disposable glass ampoule contains carefully premeasured quantity of color-forming reagent sealed under vacuum. When ready to test, break ampoule tip under surface of water sample with special snapper device supplied with kit. Vacuum pulls sample into ampoule where it is mixed, then compared with liquid color standards (also supplied).

Dissolved Oxygen Test Kits

High-Range — 0 to 12ppm

Measures dissolved oxygen from 0-12ppm in almost any type of water sample — lakes, streams, waste treatment systems, fisheries, BOD analysis.

Fill sample cup to 25ml. Add neutralizer solution and stir. Snap CHEMet tip in sample and mix contents; then compare with color standards. Analysis time: 3min.

Uses indigo-carmin reagent in acid solution. Changes from colorless to blue when dissolved oxygen is present. Requires no corrections for temperature, pressure, salinity, or dissolved gases.

Ordering Information: Kit includes comparator, snapper, sample cup, neutralizer solution, 30 CHEMets, instructions.

13-299-20037.50

Refill Packs

For 13-299-200 high-range O₂ kit. Contains 60 CHEMets and neutralizer solution.

13-299-200A30.50

Neutralizer Solution. As supplied with 13-299-200 kit. 15ml bottles.

13-299-206Pk of 6/3.00

13-299-200

Chlorine Kit

Suitable for determining total chlorine residual in chlorinated water or sewage. Range: 0 to 2ppm. Uses highly sensitive and widely accepted o-tolidine reagent. Analysis time: 2 min.

Ordering Information: Kit includes comparator, snapper, sample cup, 30 CHEMets, instructions.

13-299-21027.50

Low-Oxygen-Range Kits

Three kits measure dissolved oxygen from 0-1ppm, 0-40 and 0-100ppb. Intended for routine analysis of deaerated boiler feed-water or oil well applications where seawater or brine is monitored for corrosion control.

Procedure is same as with high-range kit except CHEMet is inserted into flowing stream of sample. Sampling tube for this purpose is supplied with kit. Uses Rhodazine D™ reagent which produces reddish-violet color when it reacts with oxygen. Analysis time: 1 min.

Kit includes comparator, snapper, sampling tube, 30 CHEMets, instructions. 13-299-201 also contains sample cup.

Range	Cat. No.	Ea
0-1ppm	13-299-201	33.50
0-40ppb	13-299-202	27.50
0-100	13-299-203	27.50

Refill Packs

For low-range O₂ kits. Each refill pack contains 30 CHEMets.

For Kit	Cat. No.	Ea
13-299-201	13-299-201A	15.00
13-299-202,	13-299-202A	15.00
13-299-203		

Other oxygen analyzers are listed on pp 869-872.

Iron Kits

Two kits for determining total soluble iron in water treatment, corrosion testing, and pollution surveillance samples. Low-range kit has 0 to 1ppm range: dual-range kit, 0 to 1ppm and 1 to 10ppm. Both kits use 1,10-phenanthroline reagent. Analysis time: 2 min.

Kits include comparator, snapper, sample cup, 30 CHEMets, instructions. Dual-range kit has 2 comparators.

Range	Cat. No.	Ea
0-1ppm	13-299-212	27.50
0-1, 1-10	13-299-213	38.50

Phenols Test Kit

Determines phenolic compounds from 0-1 and 0-12ppm in wastewaters produced from manufacture of steel, resins, petroleum products, and organic chemicals.

Uses 4-amino-antipyrine reagent in alkaline solution. Produces reddish-purple color when it reacts with phenolic compounds. Kit contains 2 comparators for estimating phenol at both high (up to 12ppm) and low (below 1ppm) concentrations. Analysis time: 1 min.

Ordering Information: Kit includes 2 comparators, snapper, sample cup, 30 CHEMets, instructions.

13-299-20535.50

Refill Packs

For Phenols Test Kit. Contains 60 CHEMets.

13-299-205A24.50

13-299-205

Ammonia Nitrogen Kits

Two kits for measuring ammonia nitrogen in water. Low-range kit: from 0 to 1ppm in boiler feedwater and stream condensate. Dual-range kit (industrial and environmental applications): has 0 to 1ppm and 1 to 10ppm ranges. Both kits employ direct Nesslerization. Analysis time: 1min.

Kits include comparator, snapper, sample cup, 30 CHEMets, instructions. Dual-range kit has 2 comparators.

Range	Cat. No.	Ea
0-1ppm	13-299-208	27.50
0-1, 1-10	13-299-209	38.50

Refill Packs

For ammonia nitrogen, chlorine, iron kits. Each refill pack contains 30 CHEMets.

For Kit	Cat. No.	Ea
13-299-208	13-299-208A	15.00
13-299-209	13-299-209A	15.00

13-299-213	13-299-213A	15.00

AquaRator COD Analyzer

Chemical oxygen demand of water in 2 minutes

Chemical oxygen demand (COD) measurements determine oxygen-consuming organic pollutants in water. Conventional APHA method takes 2 hours. Precision AquaRator takes just 2 minutes. Results are reproducible to $\pm 3\%$.

Simply inject $20\mu\text{l}$ of water into the platinum-catalyzed combustion furnace. Entire analysis is automatic. Stream of dry CO_2 burns organic pollutants in water to CO and H_2O . Water is absorbed and CO is measured by integral infrared analyzer. Results recorded as peak on strip-chart recorder.

Calibrate with solution of sodium acetate trihydrate to get chart of pen excursion vs oxygen content. (Integral carbon furnace reduces any oxygen in CO_2 to CO , which establishes recorder baseline.) Nominal range is 50 to $300\text{mg O}_2/\text{liter}$. Covers entire range of interest to Environmental Protection Agency (EPA). Higher concentrations measured by diluting samples.

Completely self-contained. All you need is cylinder of dry CO_2 with regulator; 10-100mV recorder with 1-2sec pen response and 5mm/min chart speed; and connecting tubing. Cylinder of CO_2 normally lasts months (use 130cc/min during tests, 50cc/min on standby). Charcoal for carbon furnace lasts two months. Desiccant (indicating Drierite[®]) is renewed every night.

Temperatures of quartz-tube furnaces (440°C for carbon furnace; 900°C for sample furnace) are controlled by optical pyrometers and proportional power supplies. Needle valve and flowmeter regulate flow of CO_2 .

15-374

Ordering Information: With built-in furnaces; injection syringe; supplies of charcoal furnace packing and Drierite desiccant, for use on 120V 60Hz. Housing is heavy-gauge aluminum and sheet steel with baked-enamel

finish. Hinged covers give quick access to all components. 56Lx61Wx41cmH. Shipping wt, 79kg (175 lb).

15-374.....8675.00

Cell for Plankton Counting

Glass base plate with glass walls holds 1ml water sample. Place on microscope stage for plankton counting. With 3 cover glasses for high-power, short focal length lenses. 20x50mm.

15-425

15-435

Portable Composite Sampler

- Collects 3-20 samples/hr, 150-5000ml
- Collects flow-proportioned composite

Surveyor II is lightweight for easy portability. May be used with any appropriate sample container. Also suitable for permanent installation. Can collect 3 to 20 samples per hour. Samples 150 to 5000ml. Over-all composite time limited only by size of container used. Will collect flow-proportioned composites when placed by either a pulse duration flowmeter or a totalizer (integrator) flowmeter. Sample may be composited in an auxiliary refrigerator or ice chest.

Ideal for round-the-clock sampling, for flow-proportioned samples of plant influent and/or effluent, and for large composites for bench scale studies.

Locate Surveyor II as high as 1.8m above point from which samples are to be collected. Connect 13mm hose between sample and fittings on Surveyor. Place tube from sample diverter in sample receiver [2-gal (7.6-liter) jug to 55-gal (208-liter) drum].

For time cycle sampling, set sampler's switch to TIMER. Set number of samples per hour on inner dial of programmer. Each time a sample is to be collected, self-priming pump operates for period set on timer. During this time about 15% of pump's throughput is diverted to sample receiver. When pump stops collecting sample, liquid level in exhaust line drops rapidly, vigorously backwashing diverter to prevent clogging.

94-180

For flow proportional sampling, attach proportional hookup cable in place of standard cable. Make spade terminal connections to flowmeter. Set switch to FLOWMETER. Surveyor II's timer collects time signals from flowmeter. When time interval corresponds with desired flow measurement, sample is taken.

Sample program controller has synchronous motor and steel baked-enamel finish. Universal pump motor.

Ordering Information: With 3m standard hookup cable with 3-wire grounded plug and keyed connection to sampler, 46cm diverter line to sample container, two 13mm swivel fittings, and instruction manual. 20Lx 28Wx25cmH (including pump). 115V 60Hz. 94-180.....515.00

Portable Composite Sampler

- Collects samples in remote areas
- Collects samples in proportion to flow

15-394-5

Scout II is completely self-contained, moisture-proof, automatic sampler with battery-operated power supply and a built-in AC-to-DC converter. Can collect 1, 2, 4, or 8 samples per hour or 1 sample every 2 or 3 hours. Lifts sample as high as 5.5m above liquid level. Automatic turn-off when composite jar is filled. May collect a flow-proportioned composite by pacing sampler with a contact-making flowmeter.

Ideal for sampling corrosive or solids-bearing industrial wastes and for use in manholes or other awkward areas.

Place sampler alongside stream or sewer to be sampled, on a bracket, or suspended above high water level in manholes. Submerge inlet screen. Connect inlet tubing to sampler's peristaltic pump. Set "samples per hour" switch to desired number. Select desired purge cycle (before sampling, after sampling, or both). Calibrate sampler for desired volume per sample. Scout II is ready for actual operation.

Each time sample is collected, pump operates in reverse to clear pump system of any previous sample. Pump then runs forward for preset time. Test switch allows purging or sample collection on demand for testing and calibrating without disturbing test program

Ordering Information: In molded fiberglass case with stainless-steel hinge and latches. Corrosion-resistant pumping system and brush type, 12V DC motor. With 3m inlet tube assembly with inlet screen, two 1-gal (3.8-liter) polypropylene sample containers, AC and DC power cables, and instruction manual. 35Lx15Wx43cmH. 15-394-5975.00

Swimming Pool Test Set

For pH and chlorine

Add indicator to water sample . . . place in Lucite cell . . . compare with colors of 9 standards in sliding holder. Portable swimming Pool Test Set has phenol red indicator and standards for pH 6.8-8.4; Orthotolidine indicator and standards for 0.0-1.0ppm chlorine. According to APHA *Standard Methods*.

Ordering Information: With 3 sample cells, 2 pipets, plastic carrying case. 28Lx 10Wx14cmH. 15-396.....45.60

For chlorine only. Same as 15-396 but without pH standard and phenol red indicator. Has 2 vials of Orthotolidine and only one pipet. 15-397.....33.05

Lucite cell. 15-396ABag of 3/3.20

Six-Paddle Stirrer

Saves time in water/wastewater labs

15-443-50 & 15-443-55

Six monel metal paddles stir six water samples simultaneously. Test conditions are identical, except for chemical concentration placed in each beaker. Pick best one, then scale up to plant-size quantities.

Ideal for determining optimum amounts of alum or ferric sulfate for flocculation tests in water and sewage.

Six paddles, 25Wx76mmL driven by 1/30hp variable speed motor from 10 to 100 rpm. Speed controlled by variable transformer, shown on tachometer dial. Paddles operate at same speed; paddle depths adjustable; any paddle can be removed without stopping the others.

Ordering Information: Steel and aluminum frame, 25Lx107Wx36cmH. Without beakers. 115V 60Hz.

15-443-50.....375.00

Illuminator Base. For use with 15-443-50 Stirrer. Consists of fluorescent lamp mounted below translucent plastic plate to provide diffused cold light through floc samples. Aluminum base. With fluorescent tube. 115V 60Hz.

15-443-55.....97.00

Waterbaths. See Baths, pp 59-79.

Water Pressure Regulator

Handy control for stills, baths

15-529

Deliver constant water pressure to water stills, baths, and condensers with this water pressure regulator. Pressure adjustable by turning thumbscrew, from 0 to 10psi (0-0.7kg/cm²). Solid brass to resist corrosion. With 6.4mm female inlet and outlet connections.

15-529.....16.00

Disposable Petri Dishes

For fecal coliform test

Excellent for 47mm microbiological membrane techniques. With especially tight seal to reduce amount of moisture entering or leaving. Polystyrene, 12Hx50mm dia. Non-toxic, disposable, and sterile. Each pack contains 25 sleeves of 20 dishes each.

Fisher Bath Wax

High heat transfer capacity, low melting point, high flash point, and high smoke point. Desirable medium for organic distillations, constant temperature baths, and thermometer standardizations.

Melting point, 60°C. Does not smoke appreciably at 270°C. Won't flash until 325°C. Fire point of 360°C. Used safely as high as 150°C above point where paraffin becomes dangerous. Cold, solidified cake can be readily removed from bath and put away for later use.

Supplied in flakes. Standard 5 lb (2.3kg) package has volume equivalent to usual 10 lb (4.5kg) container.

B-219.....5 lb (2.3kg)/22.85
25 lb (11.2kg)/78.00

Classic Wheatstone Bridge

For classroom or lab

Teachers can use this bridge with DC power source (up to 10V), galvanometer as null indicator, to demonstrate principles of Wheatstone bridge. Serves as 4-dial resistance box giving accurate resistances from 1 ohm to 11,110 ohms.

Four decade switches with concealed contacts "dial" resistance. Ratio switch has settings of 0.001, 0.01, 0.1, 1, 10, 100, and 1000X switch readings. Non-inductive wire-

wound resistors on ceramic spools, accurate to $\pm 0.05\%$, rated at $\frac{1}{4}$ watt.

Ordering Information: Unit is 17Lx28Wx12cmH, has binding posts for battery, galvanometer, resistance to be measured; pushbutton keys in power and galvanometer circuits. Wt, 2.7kg.

9-340.....425.00

9-340

Wire

20% Chromium, 80% Nickel

This alloy is highly resistant to oxidation and gives very efficient heating. Heats to 1090°C. Lighter-gauge wire also used to make inoculating needles. Supplied in $\frac{1}{4}$ lb (113g) spools.

Insulated Chromel "A" Wire

Heat or insulate irregularly shaped apparatus including fractionating columns, vapor diffusion pumps, absorption columns, vapor baths, crocks, pots, etc. Covering is 3.8mm thick, felted asbestos which permits tight adjacent winding or overlapping of wire for optimum heat distribution. Covering also facilitates cementing of wire to vessel. Color-coded according to gauge, and simple to use. Wattage necessary to produce desired temperature may be computed approximately from surface area of vessel and temperature. If rheostat is used, its resistance should be greater than $\frac{1}{3}$ wire resistance and its carrying capacity should be greater than amperage used. 30m spools.

Wire Gauze

Iron Wire Gauze

15-580

Squares give good support for flame heating 16 mesh. No. 25 B&S gauge

Sq Size	Cat. No.	Pk of 12
10x10cm	15-580A	4.85
13x13	15-580B	5.75
15x15	15-580C	6.75

Nickel-Chromium Wire Gauze

15-585

Non-rusting, high temperature. Withstands hotter flame than iron gauze

Sq Size	Cat. No.	Ea	Pk of 5
10x10cm	15-585A	1.40	5.95
13x13	15-585B	1.80	7.65
15x15	15-585C	2.35	10.00

Asbestos-Centered Iron Wire Gauze

15-590

For high-heating capabilities. Asbestos securely anchored to mesh. Edges of mesh turned over to prevent fraying

Sq Size	Cat. No.	Pk of 12
10x10cm	15-590A	6.50
13x13	15-590B	7.50
15x15	15-590C	8.50

Nickel-Chromium Wire

13-095

Makes inoculating needles and loops. Good substitute for platinum, wire resists oxidation and is non-corrosive at normal temperatures. Can be used with 13-090 and 13-093 Holders (see page 626). Supplied in 61cm coils.

B&S Gauge	Dia	Cat. No.	Pk of 12	Case of 72
22	0.64mm	13-095A	3.50	18.90
24	0.51	13-095B	3.50	18.90
26	0.41	13-095C	3.50	18.90

Platinum Gauze

13-761-5

Ideal for high-heat work. Won't oxidize, resists chemical deterioration, won't contaminate objects being heated. Pure platinum, carefully woven.

45 Mesh

Size	Cat. No.	Ea
2.5x2.5cm	13-761-5A	21.00

Fisher Scientific Company

Wrapping Film

Seals labware . . . waterproof, easy to use

Multi-Purpose Thermoplastic Parafilm

Quickly, effectively seals labware. Waterproof, moisture-proof film prevents sample evaporation, contamination; protects anhydrous materials. Can be folded repeatedly and twisted around sharp surfaces without rupturing. Valuable for mounting diagrams, pictures, maps.

Stretched lengthwise at 21°C, Parafilm increases approximately 200%. Yet when tension is removed, film only partially returns to original length. Becomes more flexible, softer, stronger as temperature increases.

Withstands extreme humidity changes. Resistant to alcohol, medium-concentration acids, alkalis. Has low water vapor permeability. Resists evaporation better than viscose film, transparent rubber film, cellulose acetate film, tin foil.

Five sizes available in rolls, interlined with paper to prevent adhering. 13-374-10, 13-374-12, and 13-374-15 rolls are packaged in cardboard dispensing cartons.

Roll Size	Cat. No.	Roll	Case of
51cmWx7.6mL	13-374	9.00	12 rl/ 91.00
51x15	13-374-5	11.00	6 rl/ 63.25
10x38	13-374-10	6.30	12 rl/ 64.00
10x76	13-374-12	11.50	12 rl/118.00
5x76	13-374-15	6.80	12 rl/ 68.50

13-374

13-374-10

Polyvinyl Chloride Film

Clear all-purpose self-adhering film provides tight, protective covering to dishes, beakers, bottles, other lab containers. Roll is 46cmWx305mL.

trust

(trŭst), verb.

to rely, depend; to have confidence in.

When you reach for a reagent, you expect **dependability**. You have a right to. Reagents are precision tools in bottles.

In laboratories the world over, men and women reach for **Fisher** reagents because they **are** dependable. In fact, professionals have placed their trust in Fisher chemicals for over a century and a quarter.

Fisher: reagent-maker. We develop, manufacture, test, package, and distribute reagents worldwide. We were **first** to offer reagents with a detailed lot analysis. And today we are a leading producer of materials to expedite **instrumental analysis** at the parts-per-billion level . . . for use as research materials . . . and for use as standards.

Take a moment to look at the label on the opposite page. Then at the photos of Fisher Chemical Manufacturing Division facilities that stand **behind** the label. They help show why professionals trust the big blue Fisher "F."

PURITY GRADE at a glance.
Certified = highest Fisher Grade.
ACS = meets reagent specifications of American Chemical Society, the universal authority.

CATALOG NUMBER. One of over 20,000 stocked chemicals, with delivery expedited by industry's most advanced computer, Fisher FASTBACK, linking Fisher chemical plants with branches coast to coast. Result: an incomparable reservoir of chemicals, as close as your nearest branch.

SIZE. For your convenience, stated in both systems of measurement.

ACTUAL LOT ANALYSIS. Not mere "maximums." Or vague designations like "chemically pure." Fisher started it all in 1874 — detailed analysis, right on the label. Your guarantee of purity. Low-cost protection for your research, testing, and teaching programs.

COMPLETE SAFETY DATA. Though many chemicals present little or no hazard in normal handling and storage, some do. Fisher label presents clear-cut precautionary data (including instructions in event of accidental exposure, spill or fire)

LOT NUMBER. Gives concrete validity to the detailed analysis on the label. Represents actual samples and documentation on file in the Fisher Chemical Manufacturing Division.

WHERE APPLICABLE, OSHA classification for flammable and combustible liquids.

THE SOURCE. You are buying direct from the producer (eliminating middlemen). As source, Fisher can stringently control quality every step of way — from raw material to packaged chemical.

Certificate of Actual Lot Analysis
CH₃CO.CH₃ F.W. 58.08

Using the Chemical Index

Purity Grades

Fisher Certified Reagents — meet or surpass latest American Chemical Society standards for purity (the only universally accepted specification for reagents). That purity is detailed by an **actual lot analysis** on each label. (Catalog shows "typical" analysis; actual analysis of Certified reagent you purchase will, of course, meet or even surpass purity shown in catalog.)

Fisher Reagent — meets maximum limits of significant impurities as stated. Does not have specific lot analysis, or ultra-stringent requirements of Certified grade above.

Laboratory Grade — equivalent in purity to United States Pharmacopeia (USP) and National Formulary (NF) listings.

Purified Grade — designates chemicals of quality where there are no official standards. Especially for inorganic chemicals with manufacturing uses.

Practical Grade — sufficiently high quality for use in many syntheses and other applications.

Technical Grade — selected commercial grades, scrupulously clean, and of reasonable chemical purity. Where usable, most economical grade.

Note: Eastman Organics — fall into Reagent, Practical, and Technical grades, with specifications generally determined by melting or boiling point.

Specialties

In addition to the 6 grades, we also offer a comprehensive selection of chemicals, painstakingly produced and tested for specific purposes and thus identified in their listing.

Among them: grades designed expressly for chromatography . . . electronics . . . histology/cytology . . . in vitro diagnostics . . . liquid scintillation counting . . . pesticide analysis . . . spectrophotometry.

All are use-tested and every lot is guaranteed to meet instrumental and procedural specs as detailed in the listing, and, where applicable, are supplied with IR, UV and other verifying data. In this group are some of the purest substances available commercially anywhere.

Discount Policy

Fisher discount policy is unique. **Full-case** discount applies to 4-packs and 6-packs. No need to purchase 12 units to qualify! A substantial saving for you. In full-discount 6-pack: all sizes below 5 lb (2.3kg) or 1 gal (3.8 liters). In full-discount 4-pack: 5 lb and 1 gal sizes.

This discount applies to **all** purity grades — not just reagents. However, it does not apply to Acetic, Hydrochloric, Nitric, Perchloric, and Sulfuric Acid, and Ammonium Hydroxide. Also Molecular Sieves and Silica Gels. These have **their own** discounts, detailed under each listing.

Organics (those with case quantity listings) can be assorted with inorganics for the following additional discounts: 10 to 49 assorted cases, list less 10%; 50 assorted cases, list less 20%.

Shipping

Chemicals can be sold **only** to institutions, full-time educators, and other professionals, on purchase order or organization letterhead. (We are not permitted to honor student orders.) Accompany all orders with shipping instructions, including marking and routing. **All prices** FOB shipping point.

Regulations of Department of Transportation and Interstate Commerce Commission must be observed. (Thus, certain corrosive chemicals, poisons, oxidizers, and flammables cannot be shipped parcel post.) Limited quantities will be shipped via UPS; larger quantities by freight. They are listed as **Non-Mailable**.

In addition, we comply fully with all federal regulations governing **radioisotopes and controlled drugs**. Though this means additional "paper work," we know you will agree that stringent compliance is vital in the interest of safety for all.

Federal regulations require that, as of January 1, 1977, all hazardous materials classified as **poisonous** (liquids or solids, Class B) must bear the DOT poison label regardless of quantity. United Parcel Service is not permitted by law to transport poisonous materials. Therefore, this material will be shipped by motor freight, which incurs a higher freight charge.

Note: all products in Index for laboratory or manufacturing use only — NOT for drug use.

Nomenclature

We use **approved** nomenclature. Hence you will find Sulfuric Acid under "Sulfuric" not "Acid." Solutions of Sulfuric Acid are likewise under "Sulfuric" (not "Solution" or "Standard Solution" or "Volumetric Solution").

Chemical salts and compounds are listed under **element name** ("Sodium Benzoate" not "Benzoate of Sodium").

In **organic** compounds, the prefixes "alpha," "beta," "iso," "meta," "ortho," "para," "secondary," "tertiary" are abbreviated and placed **before** name of substance. They do not affect alphabetical order. Thus "p-Amino-phenol" is under "A" not "P."

Numerical prefixes, such as "tri" and "tetra," are treated as an **integral part** of the name. Look for "Trinitrotoluene" under "T."

"Mono" is **not** used. Look for "Chlorobenzene" not "Monochlorobenzene."

Symbols

Fisher CERTIFIED high-purity reagent, guaranteed to meet the specific lot analysis on the label.

LABORATORY GRADE reagent, equivalent in purity to those listed in USP and NF.

In less than case lots, requires special packing (at cost) to meet Department of Transportation or carrier regulations.

Requires refrigeration as detailed on the label.

readymades

Increasingly, busy quality-conscious laboratories are turning to "readymades" when it comes to standard solutions. Specifically, some 80 Fisher standard solutions. Here are 5 good reasons why.

- **Certified accuracy.** Just check normality limits for the 80 solutions and solution concentrates in our offering. Like our So-I-92 Iodine Solution N/50. Maximum is 0.02010. Minimum: 0.01990. Spread: only 0.00020! Unless you require even greater accuracy for your calculations, no need to re-standardize. Fisher certifies this normality range. For each lot. Right on the label.

- **Reliability.** Expiration dates printed on label for any unstable solutions.

- **Safety.** All poisons, caustic solutions clearly marked.

- **Size selection.** Choose from pint, quart, gallon bottles or handy store-&-dispense PolyPac in 2½ and 5-gallon polyethylene cubes.

- **Price.** Fisher standard solutions are budget-priced to start with. Plus important discounts by the case. You can't prepare 'em for less "at home."

All 80 available the year around from your nearest Fisher branch. Fisher readymades — with custom quality.

acids plus

The plus built into Fisher Acids is safety. Fisher, maker of acids, is also packager of acids. And sound contemporary packaging promotes safety.

Fisher Acids come in contaminant-free glass bottles, with non-drip pour rings, seal-tight polyethylene screwcaps. Both caps and labels color-coded for speedy identification.

Highly reactive items are specially protected during shipment. Example: each 5-pint bottle of Fisher Nitric Acid is encased in individual self-cushioning molded container of expanded polystyrene foam. Hydrofluoric Acid is packaged in polyethylene bottles with integral pour spout.

"Security blanket"

In addition, Fisher provides the Big Four — Glacial Acetic, Hydrochloric, Nitric and Sulfuric Acid, and Ammonium Hydroxide — in unique Safe-Cote™ glass reagent bottles coated with tough impact-resistant transparent plastic film. If a bottle is dropped, both glass fragments and reagent remain within coating. No lacerations, burns, messy clean-up. (See photo, right.)

All Fisher Acids — liquid and solid — are manufactured and packaged under today's most stringent analytical controls, on custom equipment specifically designed to safeguard purity.

We offer, from stock, a choice of 101 different acids, in 5 purity grades: Fisher Certified Reagent, Reagent, Laboratory, Purified, Technical. (All Fisher Certified and Fisher Reagent, grades meet or even surpass ACS specs.)

Fisher Acids — purity PLUS safety. With extra savings when you assort for multiple-case discounts.

Organic Acids

Cat. No.	Description	Cat. No.	Description	Cat. No.	Description	
A-37	Acetic Acid, about 80%, Fisher Reagent	A-170	Malonic Acid, Fisher Reagent	A-135	Hydriodic Acid, about 57% (Sp. Gr. 1.70), Fisher Certified	
A-38	Acetic Acid, Glacial, 99.7%, Fisher Reagent, ACS	A-49	Mandelic Acid (Amygdalic Acid), Fisher Reagent	A-145	Hydriodic Acid, about 57% (Sp. Gr. 1.70), specially purified for Micro-analysis, Fisher Reagent	
A-977	Acetic Acid, Glacial, Aldehyde and Nitrite Free	A-215	Oleic Acid, clear, Laboratory Grade	A-140	Hydrobromic Acid, about 48.5% (Sp. Gr. 1.49), Fisher Certified, ACS	
A-44	Adipic Acid, powder, Fisher Certified	A-222	Oleic Acid, purified (low in Linolic Acid)	A-142	Hydrochloric Acid, 20° Be, Technical	
A-41	p-Aminobenzoic Acid, crystal, Fisher Certified	A-218	Oxalic Acid, crystal, Technical	A-144	Hydrochloric Acid, Fisher Reagent, ACS	
A-47	1-Amino-2-Naphthol-4-Sulfonic Acid, powder, Fisher Certified	A-219	Oxalic Acid, crystal, Fisher Certified, ACS	A-146	Hydrofluoric Acid, about 52%, Technical	
A-974	1-Amino-2-Naphthol-4-Sulfonic Acid, Fisher Certified	A-220	Oxalic Acid, anhydrous, powder, Fisher Certified	A-147	Hydrofluoric Acid, 48%, Fisher Reagent, ACS	
A-61	L-Ascorbic Acid, crystal, Fisher Reagent	A-225	Palmitic Acid, crystal, Fisher Reagent	A-150	Hydrofluosilicic Acid, 30-32%, Fisher Reagent	
A-65	Benzoic Acid, Sublimed, crystal, Fisher Certified, ACS	A-253	Picric Acid, Fisher Reagent	A-154	Hypophosphorous Acid, about 50%, purified	
A-67	Benzoic Acid (from toluene), crystal, Laboratory Grade	A-258	Propionic Acid, Fisher Certified	A-158	Iodic Acid, crystal, Fisher Certified, ACS	
A-68	Benzoic Acid, Primary Standard, crystal, for calorimetry	A-277	Salicylic Acid, crystal, Fisher Certified	A-173	Molybdc Acid, 85%, Fisher Certified, ACS	
A-80	iso-Butyric Acid, Fisher Certified	A-292	Stearic Acid, flake, Laboratory Grade	A-198	Nitric Acid, 40° Be, Technical	
A-81	Butyric Acid, Fisher Reagent	A-293	Stearic Acid, powder, Fisher Reagent	A-200	Nitric Acid, Fisher Reagent, ACS	
A-82	Cacodylic Acid, purified	A-294	Succinic Acid, white, crystal, Fisher Certified	A-202	Nitric Acid, fuming (Sp. Gr. 1.50), Fisher Reagent, ACS	
C-585	Carminic Acid, Biological Stain, Color Index No. 75470	A-296	Sulfanilic Acid, crystal, Fisher Certified, ACS	A-204	Nitric Acid, red fuming (Sp. Gr. 1.60), Fisher Reagent	
C-571	Chloranilic Acid, powder, Fisher Certified	A-297	Sulfosalicylic Acid, crystal, Fisher Certified, ACS	A-228	Perchloric Acid, 60%, Fisher Reagent, ACS	
A-176	Chloroacetic Acid, crystal, Fisher Certified	A-308	Tannic Acid (Tannin), powder, Technical	A-229	Perchloric Acid, 70-72%, Fisher Reagent, ACS	
A-101	trans-Cinnamic Acid, Synthetic, crystal, Fisher Certified	A-310	Tannic Acid, powder, clearly soluble, Fisher Certified	A-223	Periodic Acid, Fisher Reagent	
A-104	Citric Acid, granular, Fisher Certified, ACS	A-314	Tartaric Acid, granular, Fisher Certified, ACS	A-237	Phosphomolybdic Acid, crystal, Fisher Certified, ACS	
A-105	Citric Acid, powder, Fisher Certified, ACS	A-315	Tartaric Acid, powder, Fisher Certified, ACS	A-280	m-Phosphoric Acid, glacial, flakes, Fisher Certified, ACS	
A-106	Citric Acid, anhydrous, Laboratory Grade	A-319	Thioglycolic Acid, Fisher Certified	A-239	o-Phosphoric Acid, about 85% Laboratory Grade	
A-109	Citric Acid, granular, Laboratory Grade	A-320	p-Toluene Sulfonic Acid, crystal, Fisher Certified	A-242	o-Phosphoric Acid, 85%, Fisher Certified, ACS	
A-940	Citric Acid, anhydrous, Fisher Certified	A-321	Trichloroacetic Acid, flake, Laboratory Grade	A-246	o-Phosphorous Acid, crystal, Fisher Certified	
A-112	Dichloroacetic Acid, purified	A-322	Trichloroacetic Acid, crystal, Fisher Certified, ACS	A-248	Phosphotungstic Acid, crystal, Fisher Certified

Inorganic acids

Cat. No. Description

A-71	Boric Acid , crystal, Laboratory Grade
A-73	Boric Acid , crystal, Fisher Certified, ACS
A-74	Boric Acid , powder, Fisher Certified, ACS
A-76	Boric Acid , fused, purified
P-154	Chloroplatinic Acid , Fisher Reagent, ACS
A-134	Hydriodic Acid , about 47% (Sp. Gr. 1.50), Fisher Certified, ACS

ACETYLTHIOCHOLINE IODIDE		5 g	10.40	
10587	Reagent M.P. 205-207° (CH ₃) ₃ N(I)CH ₂ CH ₂ SCoCH ₃ F.W. 289.18	25 g	29.80	see Acetic Acid, ACS A-38 Ammonium Hydroxide, ACS A-669 Hydrochloric Acid, ACS A-144 Nitric Acid, ACS A-200 Perchloric Acid, ACS A-229 Phosphoric Acid, ACS A-242 Sulfuric Acid, ACS A-300
ACETYLTHIOGLYCOLIC ACID				
see Acetylmercaptoacetic Acid 5430-P				
1-ACETYL-2-THIOHYDANTOIN		100 g	34.50	
3882	Reagent M.P. 175-177° CH ₃ CONCSNHCOCH ₂ F.W. 158.18			
ACETYL THIOPHENE				
see Methyl-2-Thienyl Ketone 6696				
1-ACETYL-2-THIOUREA		100 g	22.50	
4890	Reagent M.P. 166-168° CH ₃ CONHCSNH ₂ F.W. 118.16			
N-ACETYL-DL-TRYPTOPHAN		25 g	7.05	
11028	Reagent C ₆ H ₄ NHCH: CCH ₂ CH(NHCOCH ₃)COOH	100 g	19.30	
98% min. by Titration N-Blocked amino acid for peptide synthesis F.W. 246.27 M.P. 206-208°				
N-ACETYL-L-(+)-TRYPTOPHAN		5 g	8.45	
11030	Reagent C ₆ H ₄ NHCH: CCH ₂ CH(NHCOCH ₃)COOH	25 g	30.20	
98% min. by Titration [α] _D ²⁵ = 27.5° ± 2° (C = 1, in methanol) N-Blocked amino acid for peptide synthesis F.W. 246.27 M.P. 180-182°				
N-ACETYL-DL-TRYPTOPHAN p-NITRO- PHENYL ESTER		5 g	9.80	
11404	Reagent C ₆ H ₄ NHCH: CCH ₂ CH(NHCOCH ₃)COOC ₆ H ₄ NO ₂	25 g	32.10	
98% min. by spectro analysis Substrate for determination of α-chymotrypsin F.W. 367.36 M.P. 130-132°				
N-ACETYL-L-(+)-TYROSINE ETHYL ESTER		5 g	11.10	
11298	Reagent [α] _D ²⁵ = 21.5° ± 2°, (C = 4, in ethanol) Reagent for determination of α-chymotrypsin N- and C-Blocked amino acid for peptide synthesis F.W. 251.28 M.P. 77-80° 4-CH ₃ OCOC ₆ H ₄ CH ₂ CH(NH ₂)COOC ₂ H ₅	25 g	38.45	
ACETYLUREA		25 g	11.45	
5008	Reagent M.P. 216-217° CH ₃ CONHCONH ₂ F.W. 102.10	100 g	17.50

10%, clear (Laboratory Aerosol)
 Laboratory Aerosol 10% is a
 remarkable chemical solution which
 "makes water wetter" because it
 reduces surface tension and interfacial
 tension to a considerable degree even
 though it may be present in very low
 concentration. Laboratory Aerosol 10% is
 a water-clear, mobile liquid containing
 Aerosol OT (dioctyl sodium
 sulfosuccinate), water and mutual solvent

ALKACID® SHORT RANGE DISPENSERS, FISHER

A-981 Range pH 0.0 to 3.0

A-982 Range pH 3.5 to 5.5

A-983 Range pH 6.0 to 8.5

A-984 Range pH 9.0 to 11.0

A-985 Range pH 10.5 to 12.5

A-986 Range pH 12.0 to 14.0 All the plastic dispensers listed above are supplied with a color chart and a 15 foot roll of Short Range Alkacid paper. Please specify catalog number and range desired.

pk of 3 3.00
12 pk/pk 2.70

ALKACID® FULL RANGE pH TEST KIT, FISHER

A-988 This kit provides test papers giving speedy and accurate pH readings over the entire pH range from 0 to 14. The Alkacid Full Range Test Kit consists of a pocket-size case containing one dispenser with Alkacid Wide Range Test Paper and six dispensers with Short Range Test Papers. Each of the seven dispensers is in a separate compartment, with the range designated in a selection table in the top of the case. The Wide Range paper is used to locate the approximate pH, and the appropriate Short Range paper is then used to determine the precise pH value, within ± 0.25 unit.

ea 8.25

ALKACID® SOIL TESTER, FISHER, with

A-989 soil test manual. This tester determines the pH of soil, and the Alkacid Soil Test Manual lists the soil preferences and fruits, and gives instructions on how soil is to be treated if it is too alkaline or too acid. The Alkacid Soil Tester is supplied with a 15 foot roll of Soil Test Ribbon, disposable plastic dispenser and test Manual.

ANILINE(Aminobenzene)99 MOL % Pure

ΔA-759 Fisher CERTIFIED 1 qt 14.40

Meets ACS Specifications

 $\text{C}_6\text{H}_5\text{NH}_2$ F.W. 93.13

(Non-Mailable)

Chromatographic curve

available for each lot

on request.

This product darkens to a reddish-brown color on storage.

ANILINE(Aminobenzene)

ΔA-740 Fisher CERTIFIED ACS 1 pt(1.0 lb) 8.15

 $\text{C}_6\text{H}_5\text{NH}_2$ F.W. 93.13

(Non-Mailable)

Actual Lot Analysis Reported on Label

Appearance Pass test

Boiling Range Not more than 3.0°C

Boiling Point 184.4° ± 0.1°C

Residue after Ignition 0.005%

Chlorobenzene ($\text{C}_6\text{H}_5\text{Cl}$) 0.01%

Hydrocarbons (Clarity) Pass test

Nitrobenzene ($\text{C}_6\text{H}_5\text{NO}_2$) Pass test(about 0.001%)

Color (APHA) 250

This product darkens to a reddish-brown color on storage.

AA without tears

Time-&-trouble savers are these ready-to-use AA standards. Fisher Certified Atomic Absorption Standards. Especially designed to expedite trace determinations using today's AA and flame emission techniques. The very same solutions developed for and used in the distinguished analytical laboratories of Fisher Chemical Manufacturing Division. Our "private stock."

They include all 30 of the most commonly determined trace metals in clinical, industrial, and environmental facilities. Each painstakingly tested on today's most advanced instrumentation via NBS standards and spectrographically pure metals.

Label specifies solute and solvent employed — you tell at a glance if material is compatible with your analysis.

For optimum stability, they're packaged as 1000ppm solutions, in pints. One 6-pack carries full case discount! Additional savings if you assort with other Fisher reagents.

Reference Standard Solution	Solvent	Catalog Number
Aluminum	dilute hydrochloric acid	So-A-442
Antimony	dilute hydrochloric acid	So-A-450
Arsenic	dilute nitric acid	So-A-449
Barium	distilled water	So-B-162
Bismuth	dilute nitric acid	So-B-163

buffer bonanza

Standardizing pH and potentiometric titration apparatus? Fisher Certified Buffers provide matchless performance — every time. Each precision-formulated against NBS primary standards. Each certified accurate to ± 0.02 pH (25°C).

In ready-to-use solutions, 1.00 to 10.00 pH in 1.0 pH increments, plus 4.63 and 7.40. (And, on special order, any others you desire, from 1.0 to 11.0, in 0.1 pH increments.)

Also yours as concentrates — great for field use, or where space is tight. Both solutions and concentrates come in special polyethylene bottles with screwcaps, plastic seals, handy grips. Atmospheric contamination is nil; pH remains constant. Some solutions also offered in store-&-dispense PolyPac — just attach unit's leakproof faucet to strong inert polyethylene cube.

Also available as buffer salts, in laminated poly/aluminum foil Gram-Pac envelopes that keep freshness indefinitely.

Errorproofed too

Three popular pHs now in color-coded solutions. Both buffer and label tinted with harmless, inert, permanent color. Mistake-proof in or out of bottle. Certified accurate to ± 0.01 pH (25°C). Neat squeeze-top pints with snap-off protective covers. (As with our regular buffer solutions and concentrates, it takes only 6 pints to earn a full case discount.)

For special needs

Fisher buffer know-how also expedites your special application needs . . . with 9 Certified Special-Purpose Buffers for electrophoresis, water analysis, and clinical/public health procedures. All certified accurate to ± 0.02 pH (25°C).

Standard buffer solutions

pH	Cat. No.	Composition	Size
1.00	So-B-140	Potassium Chloride-Hydrochloric Acid	Pt
2.00	So-B-96	(Same as So-B-140)	Pt
3.00	So-B-97	Potassium Biphthalate-Hydrochloric Acid	Pt

Color-coded buffer solutions

pH	Cat. No.	Color	Size
4.00	So-B-101	Red	Pt
7.00	So-B-107	Yellow	Pt
10.00	So-B-115	Blue	Pt

Electrophoretic Buffers

E-1 Electrophoretic Buffer 1, pH 8.60. Ionic strength 0.05. Barbiturate buffer used in paper electrophoresis to separate normal and abnormal hemoglobins. Supplied in boxes of 12 Gram-Pac envelopes, each making 1 liter.

E-2 Electrophoretic Buffer 2, pH 8.60. Ionic strength 0.075. Used for electrophoretic separations of serum proteins, glycoproteins, and hemoglobins. Supplied in boxes of 12 Gram-Pac envelopes, each making 1 liter.

So-B-139 Borate Buffer Concentrate, pH 9.00. Specially prepared for use in various modifications of Smithies' method of starch gel electrophoresis. 0.5 M in boric acid and 0.2 M in sodium hydroxide. One volume of concentrate, diluted with 9 volumes of distilled water, makes buffer of pH 9.00 ± 0.02 at 25°C. Dilution ratios for use in horizontal and vertical starch gel electrophoresis are given on label. Available in quart polyethylene bottles.

Water Analysis Buffers

So-B-119 Buffer Solution, pH 10. Ammonium chloride/ammonium hydroxide buffer containing magnesium EDTA, for use in determination of water hardness by Schwarzenbach titration method, as described in *Standard Methods for the Examination of Water and Wastewater* (13th Edition). Available in quart polyethylene bottles.

So-P-341 Phosphate Buffer Solution, pH 7.2, APHA. For use in determination of biochemical oxygen demand as described in *Standard Methods for the Examination of Water and Wastewater* (13th Edition). Available in quart polyethylene bottles.

Clinical and Public Health Buffers

So-P-82 Phosphate-Citrate Buffer Solution, pH 4.00. Dibasic sodium phosphate/citric acid (Bausch & Lomb Buffer No. 66), used in determination of ascorbic acid in plasma or serum. Available in pint polyethylene bottles.

So-B-122 Buffer Solution, Giordano, pH 6.4 to 6.5. Used in blood staining with Wright's Stain. Monobasic potassium phosphate/disodium phosphate. Available in pint or quart polyethylene bottles and 2½ or 5 gallon PolyPac containers.

So-P-81 Phosphate Buffer Solution, pH 6.8. For determination of amylase in plasma and serum. Monopotassium phosphate/sodium hydroxide (Bausch & Lomb Buffer No. 65). Available in pint polyethylene bottles.

So-P-74 Phosphate Buffer Solution, Meyer-Free-Rosinski, pH 7.2. For determination of amylase in plasma or serum (Bausch & Lomb Buffer No. 63; Coleman Buffer No. 6). Available in pint polyethylene bottles.

n-BUTYLAMINE

ΔB-415	Fisher CERTIFIED	1 pt (0.75 lb)	6.20
	$\text{CH}_3(\text{CH}_2)_3\text{NH}_2$	6x1 pt,cs	20.10
	F.W. 73.14		
	(Non-Mailable)		

Actual Lot Analysis Reported on Label

	Assay W/W	98-100%	
	Boiling Range	76-78°C	

iso-BUTYLAMINE

1389	Reagent B.P. 65-67°	250 g	6.25
	$(\text{CH}_3)_2\text{CHCH}_2\text{NH}_2$	1 kg	15.05
	F.W. 73.14		
	(Non-Mailable)		

sec.-BUTYLAMINE

905	Reagent B.P. 62-64°	100 g	3.65
	$\text{CH}_3\text{CH}(\text{NH}_2)\text{CH}_2\text{H}_3$	500 g	6.75
	F.W. 73.14		
	(Non-Mailable)		

tert.-BUTYLAMINE

6772	Reagent B.P. 44-45°	500 g	7.20
	$(\text{CH}_3)_3\text{CNH}_2$	3 kg	25.15
	F.W. 73.14		
	(Non-Mailable)		

tert.-BUTYLAMINE BORANE

8205	Reagent M.P. 95° dec.	5 g	4.15
	$(\text{CH}_3)_3\text{CNH}_2 \cdot \text{BH}_3$	25 g	8.80
	F.W. 86.97		
	(Non-Mailable)		

BUTYLAMINE HYDROCHLORIDE

5993	Reagent	100 g	21.65
	$\text{CH}_3(\text{CH}_2)_3\text{NH}_2 \cdot \text{HCl}$		
	F.W. 109.60		

tert.-BUTYLAMINE HYDROCHLORIDE

8542	Reagent	100 g	17.25
	$(\text{CH}_3)_3\text{CNH}_2 \cdot \text{HCl}$		
	F.W. 109.60		

N-BUTYLANILINE

768	Reagent B.P. 118-120°/15 mm	25 g	13.90
	$\text{C}_6\text{H}_5\text{NH}(\text{CH}_2)_3\text{CH}_3$	100 g	44.15
	F.W. 149.24		
	(Mail up to 100 g)		

p-BUTYLANILINE

10631	Reagent B.P. 111-112°/5 mm	250 g	13.90
	$\text{CH}_3(\text{CH}_2)_3\text{C}_6\text{H}_4\text{NH}_2$	1 kg	45.70
	F.W. 149.24		
	98% min. by non-aqueous Titration		
	Nematic liquid crystal intermediate		

p-BUTYLBENZALDEHYDE

11097	Reagent B.P. 121-123°/7 mm	5 g	16.75
	$\text{CH}_3(\text{CH}_2)_3\text{C}_6\text{H}_4\text{CHO}$		
	F.W. 162.23		
	98% min. by G.L.C.		
	Isomer content (NMR): None detected		
	$n_D^{20} = 1.5265 \pm 0.0005$		
	Nematic Liquid Crystal Intermediate		

BUTYL BENZENE

1778	Reagent B.P. 181-183°	25 g	6.45
	$\text{CH}_3(\text{CH}_2)_3\text{C}_6\text{H}_5$	100 g	16.90
	F.W. 134.22		

iso-BUTYL BENZENE

7502	Reagent B.P. 172-174°	10 g	4.00
	$(\text{CH}_3)_2\text{CHCH}_2\text{C}_6\text{H}_5$	25 g	5.50
	F.W. 134.22		

sec.-BUTYL BENZENE

1493	Reagent B.P. 170-172°	25 g	5.00
	$\text{CH}_3\text{CH}_2\text{CH}(\text{CH}_3)\text{C}_6\text{H}_5$	100 g	11.20
	F.W. 134.22		
	98% min. by G. L. C.		

tert.-BUTYL BENZENE

1507	Reagent B.P. 167.5-170.5°	25 g	9.55
	$(\text{CH}_3)_3\text{CC}_6\text{H}_5$	100 g	25.75
	F.W. 134.22		
	98% min. by G. L. C.		

BUTYL BENZOATE

348	Reagent M.P. -22 to -20°	500 g	5.00
	$\text{C}_6\text{H}_5\text{COO}(\text{CH}_2)_3\text{CH}_3$	3 kg	11.85
	F.W. 178.23		

iso-BUTYL BENZOATE

1183	Reagent B.P. 112-113°/11 mm	100 g	15.20
	$\text{C}_6\text{H}_5\text{COOCH}_2\text{CH}(\text{CH}_3)_2$	250 g	32.50
	F.W. 178.23		

p-BUTYLBENZOIC ACID

14008	Reagent 98% min. by Titration	25 g	67.05
	Nematic liquid crystal		
	Typical mesomorphic range:		
	C-N 98°, N-I 113°C		
	For the preparation of nematic aromatic esters		
	$\text{CH}_3(\text{CH}_2)_3\text{C}_6\text{H}_4\text{COOH}$		
	F.W. 178.23		

p-tert.-BUTYLBENZOIC ACID

6965-P	Practical M.P. 165-167°	500 g	5.60
	$(\text{CH}_3)_3\text{CC}_6\text{H}_4\text{COOH}$	2 kg	12.50
	F.W. 178.23		

p-BUTYLBENZOYL CHLORIDE

14043	Reagent B.P. 97-99°/1.5 mm	25 g	37.65
	98% min. by argentometric		
	Titration and by G. L. C.		
	$n_D^{20} = 1.5340 \pm 0.0005$		
	Intermediate for nematic esters		
	$\text{CH}_3(\text{CH}_2)_3\text{C}_6\text{H}_4\text{COCl}$		
	F.W. 196.68		

n-BUTYL BROMIDE

ΔB-400	Fisher CERTIFIED	1 pt (590 g)	18.45
	$\text{CH}_3(\text{CH}_2)_3\text{Br}$	6x1 pt,cs	78.90
	F.W. 137.03		
	(Mail up to 1 pt)

		1 oz	257.50	5-CHLOROSALICYLALDEHYDE		25 g	12.65
Maximum Limits of Impurities				4335 Reagent M.P. 98-100°		100 g	38.05
Assay			37.50% min.	<chem>5-ClC6H3-2-OH-1-CHO</chem> F.W. 156.57			
Solubility in Alcohol			Clear	5-CHLOROSALICYLIC ACID		100 g	10.40
Alkalies and Other Salts (as SO ₄)			0.05%	6670-P Practical M.P. 167-174°		500 g	35.80
Suitability for Potassium determination			Pass test	<chem>5-ClC6H3-2-OH-1-COOH</chem> F.W. 172.57			
1-CHLOROPROPANE		100 g	18.80	p-CHLOROSTYRENE		5 g	14.05
701 Reagent B.P. 46-48°		500 g	77.95	8972 Reagent B.P. 71-73°/14 mm		25 g	53.45
<chem>CH3CH2CH2Cl</chem> F.W. 78.54				<chem>C1C6H4CH:CH2</chem> F.W. 138.60			
(Non-Mailable)							
2-CHLOROPROPANE		100 g	12.45				
1108 Reagent B.P. 34-35°		500 g	46.00				
<chem>(CH3)2CHCl</chem> F.W. 78.54							
3-CHLORO-1,2-PROPANEDIOL		250 g	6.15				
463-P Practical B.P. 115-120°/15 mm		1 kg	14.50				
<chem>CH2OHCHOHCH2Cl</chem> F.W. 110.54							

N-CHLOROSUCCINIMIDE				
6578	Reagent M.P. 148° Lit. COCH ₂ CH ₂ CONCI F.W. 133.54	100 g 500 g	6.90 23.10	
96% min. by Titration				
p-CHLORO-N-SULFINYLANILINE				
9490-P	Practical M.P. 33-35° ClC ₆ H ₄ NSO F.W. 173.62	100 g	43.25	
CHLOROSULFONIC ACID				
669	Reagent ClSO ₃ H F.W. 116.52 (Non-Mailable)	1 kg	13.65	
CHLOROSULFONYLACETYL CHLORIDE				
8174-P	Practical B.P. 96-98°/10 mm ClSO ₂ CH ₂ COCl F.W. 177.01 (Non-Mailable)	5 g 25 g	12.45 45.25	
m-(CHLOROSULFONYL) BENZOIC ACID				
6792	Reagent M.P. 136-138° ClSO ₂ C ₆ H ₄ COOH F.W. 220.63 (Non-Mailable)	10 g 25 g	11.05 22.00	
p-(CHLOROSULFONYL) BENZOIC ACID				
6913	Reagent ClO ₂ SC ₆ H ₄ COOH F.W. 220.63 97% by Titration	5 g 25 g	11.65 41.30	
m-(CHLOROSULFONYL)BENZOYL CHLORIDE				
5395	Reagent M.P. 18-20° ClCOC ₆ H ₄ SO ₂ Cl F.W. 239.08	25 g 100 g	23.85 82.90	
CHLOROSULFONYL ISOCYANATE				
14349	Reagent B.P. 54-56°/100 mm lit. ClO ₂ SNCO F.W. 141.53 Intermediate for heterocycles	25 g	117.25	
{9-[4-(CHLOROSULFONYL)-2-SULFOPHENYL]-6-DIETHYLAMINO-3H-XANTHEN-3-YLIDENE}-DIETHYLAMMONIUM HYDROXIDE INNER SALT				
see Lissamine Rhodamine B Sulfonyl Chloride 11886				
1-CHLOROTETRADECANE				
9946	Reagent 98% min. by G.L.C. CH ₃ (CH ₂) ₁₃ Cl F.W. 232.84	100 g	10.50	
2-CHLOROTHIOPHENE				
5921	Reagent B.P. 127-129° SC(Cl):CHCH:CH F.W. 118.59	25 g 100 g	10.30 29.90	
5-CHLORO-2-THIOPHENECARBOXALDEHYDE				
10261	Reagent B.P. 87-89°/9 mm SC(Cl):CHCH:CCNO F.W. 146.60	5 g 25 g	10.15 33.90	
6-CHLOROTHYMOL				
2777	Reagent M.P. 58-61° 6-ClC ₆ H ₂ -1-CH ₃ -4-CH(CH ₃) ₂ -3-OH F.W. 184.67 98% min. by non-aqueous Titration	100 g	16.75	
α-CHLOROTOLUENE				
see Benzyl Chloride B-277				
m-CHLOROTOLUENE				
2449	Reagent B.P. 159-161° ClC ₆ H ₄ CH ₃ F.W. 126.59	25 g 100 g	18.25 60.45	
o-CHLOROTOLUENE				
73	Reagent B.P. 157-159° ClC ₆ H ₄ CH ₃ F.W. 126.59	500 g 4 kg	5.00 14.05	
p-CHLOROTOLUENE				
74	Reagent M.P. 6-8° ClC ₆ H ₄ CH ₃ F.W. 126.59	500 g 4 kg	5.60 18.60	
CHLOROTOLUIDINE				
see Chloromethylaniline				
4-CHLORO-o-TOLYLOXYACETIC ACID				
see (4-Chloro-2-methylphenoxy)acetic Acid 6815-P				
2-CHLOROTRIETHYLAMINE HYDROCHLORIDE				
6436	Reagent M.P. 211-213° CH ₂ ClCH ₂ N(C ₂ H ₅) ₂ ·HCl F.W. 172.10 (Non-Mailable)	100 g 500 g	12.40 47.60	
2-CHLOROTRIETHYLAMINE HYDROCHLORIDE				
6436-P	Practical M.P. 200-207° (Non-Mailable)	500 g	11.90	
CHLOROTRIMETHYLSILANE				
8710-P	Practical B.P. 58-59° (CH ₃) ₃ SiCl F.W. 108.64 (Non-Mailable)	250 g 1 kg	5.60 12.30	
CHLOROTRIS (TRIPHENYLPHOSPHINE)-RHODIUM				
see Tris (triphenylphosphine)chlororhodium 11276				
CHLOROTRIPHENYLMETHANE

CHOLESTERYL ACETATE				
2391	Reagent (Monotropic) CH ₃ COOC ₂₇ H ₄₅ F.W. 428.70 Cholesteric Liquid Crystal Typical mesomorphic range 111-113 (99°C) (Monotropic)	25 g 100 g	10.50 29.35	

CHOLESTERYL ALLYL CARBONATE 10565 Reagent F.W. 470.74 $C_{27}H_{45}OCOOCH_2CH:CH_2$ Cholesteric Liquid Crystal Typical mesomorphic range: C-Ch 96, Ch-I 105°	5 g	8.45	CHOLESTERYL DODECYL CARBONATE 10434 Reagent $C_{27}H_{45}OCOO(CH_2)_{11}CH_2$ F.W. 599.00 Cholesteric Liquid Crystal Typical mesomorphic range: C-Ch 51, Ch-I 70°	5 g 25 g	7.60 20.90
CHOLESTERYL BENZOATE 9863 Reagent $C_6H_5COOC_{27}H_{45}$ F.W. 490.77 Cholesteric Liquid Crystal Typical mesomorphic range: C-Ch 148, Ch-I 176°	5 g 25 g	5.10 8.75	CHOLESTERYL ENANTHATE see Cholesteryl Heptanoate 11526		
CHOLESTERYL BROMIDE 10026 Reagent F.W. 449.57 $C_{27}H_{45}Br$ Cholesteric Liquid Crystal Typical mesomorphic range: 97-98° (61° Ch) (Monotropic)	5 g 25 g	14.15 53.95	CHOLESTERYL ERUCATE 10594 Reagent $CH_3(CH_2)_7CH:CH(CH_2)_{11}COOC_{27}H_{45}$ F.W. 707.23 Smectic Liquid Crystal Typical mesomorphic range: C-S 45, S-I 50°	5 g 25 g	9.50 30.55
CHOLESTERYL 2-BUTENE-1-YL CARBONATE see Cholesteryl Crotyl Carbonate 9840			CHOLESTERYL 2-(ETHOXYETHOXY)ETHYL CARBONATE 10016 Reagent $C_{27}H_{45}OCOOCH_2CH_2OCH_2CH_2OCH_2CH_3$ F.W. 546.83 Cholesteric Liquid Crystal Typical mesomorphic range: C-Ch -2, Ch-I 15°	10 g 25 g	9.60 17.65
CHOLESTERYL 2-BUTOXYETHYL CARBONATE 10998 Reagent $C_{27}H_{45}OCOOCH_2CH_2O(CH_2)_3CH_3$ F.W. 530.83 Smectic Liquid Crystal Typical mesomorphic range: C-S 57, S-I 62°	5 g 25 g	7.70 21.60	CHOLESTERYL 2-ETHYLHEXANOATE 10837 Reagent $CH_3(CH_2)_3CH(C_2H_5)COOC_{27}H_{45}$ F.W. 512.86 Mesomorphic Typical mesomorphic range: 46-52° (30° Ch) (Monotropic)	5 g 25 g	8.20 23.85
CHOLESTERYL BUTYRATE 10327 Reagent $CH_3CH_2CH_2COOC_{27}H_{45}$ F.W. 456.76 Cholesteric Liquid Crystal Typical mesomorphic range: C-Ch 99, Ch-I 107°	10 g 25 g	15.30 31.95	CHOLESTERYL 2-ETHYLHEXYL CARBONATE 10834 Reagent Mesomorphic $C_{27}H_{45}OCOOCH_2CH(C_2H_5)(CH_2)_3CH_3$ 99% min. by liq.-liq. chromatography F.W. 542.89 Typical mesomorphic range: C-S 25, S-Ch 32, Ch-I 35°	5 g	10.30
CHOLESTERYL CHLORIDE 9562 Reagent $C_{27}H_{45}Cl$ F.W. 405.11 Cholesteric Liquid Crystal Typical mesomorphic range: 95-96° (65° Ch) (Monotropic)	10 g 25 g	8.15 14.00	CHOLESTERYL FURFURYL CARBONATE 11005 Reagent $C_{27}H_{45}OCOOCH_2C:CHCH:CHO$ Cholesteric Liquid Crystal F.W. 510.76 Typical mesomorphic range: 78-80° (64° Ch) (Monotropic)	5 g	11.20
CHOLESTERYL CHLOROFORMATE 9761 Reagent M.P. 118-120° $C_{27}H_{45}OCOCI$ F.W. 449.12	25 g 100 g	10.20 28.25	CHOLESTERYL HEPTANOATE 11526 Reagent $CH_3(CH_2)_5COOC_{27}H_{45}$ F.W. 498.84 Cholesteric Liquid Crystal Typical mesomorphic range: 110-112° (92° Ch) (Monotropic)	25 g 100 g	8.70 25.95
CHOLESTERYL CINNAMATE 9708 Reagent F.W. 516.81 $C_6H_5CH:CHCOOC_{27}H_{45}$ Cholesteric Liquid Crystal Typical mesomorphic range: C-Ch 160, Ch-I 210°	10 g 25 g	9.90 18.35	CHOLESTERYL HEXANOATE 11524 Reagent $CH_3(CH_2)_4COOC_{27}H_{45}$ F.W. 484.81 Cholesteric Liquid Crystal Typical mesomorphic range: C-Ch 97, Ch-I 100°	25 g 100 g	8.70 25.95
CHOLESTERYL CINNAMYL CARBONATE 11003 Reagent M.P. 118-120° $C_{27}H_{45}OCOOCH_2CH:CHC_6H_5$ F.W. 546.84 Cholesteric Liquid Crystal Typical mesomorphic range: 117-119° (89° Ch) (Monotropic)	5 g 25 g	9.15 29.00	CHOLESTERYL LAURATE 10010 Reagent Mesomorphic F.W. 568.97 $CH_3(CH_2)_{10}COOC_{27}H_{45}$ Cholesteric Liquid Crystal Typical mesomorphic range: C-S 77, S-Ch 80, Ch-I 89°	25 g 100 g	15.95 54.95
CHOLESTERYL CROTONATE 10082 Reagent F.W. 454.74 $CH_3CH:CHCOOC_{27}H_{45}$ Cholesteric Liquid Crystal Typical mesomorphic range: C-Ch 97, Ch-I 112°	5 g 25 g	15.90 62.35	CHOLESTERYL LINOLEATE 10605 Reagent $CH_3(CH_2)_4CH:CHCH_2CH:CH(CH_2)_7-$ $COOC_{27}H_{45}$ F.W. 649.10 Cholesteric Liquid Crystal Typical mesomorphic range: C-S 20, S-Ch 26, Ch-I 35°	25 g 100 g	12.65 46.30
CHOLESTERYL CROTYL CARBONATE 9840 Reagent F.W. 484.77 $C_{27}H_{45}OCOOCH_2CH:CHCH_3$ Cholesteric Liquid Crystal Typical mesomorphic range: C-Ch 87, Ch-I 95°	5 g	13.35	CHOLESTERYL LINOLENATE 10596 Reagent $CH_3(CH_2CH:CH)_3(CH_2)_7COOC_{27}H_{45}$ F.W. 647.09 Cholesteric Liquid Crystal Typical mesomorphic range: C-S 35, S-Ch 45, Ch-I 48°	5 g 25 g	14.55 55.90
CHOLESTERYL DECANOATE 9779 Reagent $CH_3(CH_2)_8COOC_{27}H_{45}$ F.W. 540.92 Cholesteric Liquid Crystal Typical mesomorphic range: C-Ch 83, Ch-I 91°	25 g 100 g	13.40 41.10	CHOLESTERYL MERCAPTAN see Cholest-5-ene 3 β -thiol 10127		
CHOLESTERYL-2,4-DICHLOROBENZOATE 11318 Reagent $Cl_2C_6H_3COOC_{27}H_{45}$ F.W. 559.66 Cholesteric liquid crystal exhibits the frozen cholesteric state Typical mesomorphic range: C-Ch 120, Ch-I 210°	25 g 100 g	14.25 44.40			
CHOLESTERYL 3,5-DINITROBENZOATE 11001 Reagent $C_6H_3(NO_2)_2COOC_{27}H_{45}$ F.W. 580.77 Cholesteric liquid crystal Typical mesomorphic range: 198-198° (157° Ch) (Monotropic)	10 g	8.40			

CHOLESTERYL METHALLYL CARBONATE			CHOLESTERYL PROPARGYL CARBONATE		
9839	Reagent F.W. 484.77 $C_{27}H_{45}OCOOCH_2C(CH_3)_2CH_2$ Cholesteric Liquid Crystal Typical mesomorphic range: C-Ch 77, Ch-I 82°	10 g 13.00	9841	Reagent $C_{27}H_{45}OCOOCH_2C\equiv CH$ F.W. 468.72 Cholesteric Liquid Crystal Typical mesomorphic range: C-Ch 62, Ch-I 94°	10 g 14.55
CHOLESTERYL METHANESULFONATE			CHOLESTERYL PROPIONATE		
9734	Reagent M.P. 96-135° $CH_3OSO_2C_{27}H_{45}$ F.W. 464.75	25 g 22.50	4742	Reagent $CH_3CH_2COOC_{27}H_{45}$ F.W. 442.73 Cholesteric Liquid Crystal Typical mesomorphic range: C-Ch 97, Ch-I 114°	25 g 18.70 100 g 62.15
CHOLESTERYL 2-(2-METHOXYETHOXY)ETHYL CARBONATE			CHOLESTERYL p-TOLUENESULFONATE		
10018	Reagent $C_{27}H_{45}OCOOCH_2CH_2OCH_2CH_2OCH_3$ F.W. 532.81 Cholesteric Liquid Crystal Typical mesomorphic range: C-S 55, S-I 57°	10 g 11.65 25 g 22.75	10125	Reagent M.P. 132-133° $CH_3C_6H_4OSO_2C_{27}H_{45}$ F.W. 540.85	100 g 45.20
CHOLESTERYL 2-METHOXYETHYL CARBONATE			CHOLESTERYL 2,2,2-TRIFLUOROETHYL CARBONATE		
11007	Reagent $C_{27}H_{45}OCOOCH_2CH_2OCH_3$ F.W. 488.75 Cholesteric Liquid Crystal Typical mesomorphic range: C-Ch 70, Ch-I 83°	5 g 5.90 25 g 22.60	10564	Reagent $C_{27}H_{45}OCOOCH_2CF_3$ F.W. 512.70 Cholesteric Liquid Crystal Typical mesomorphic range: 91-93° (84° Ch) (Monotropic)	5 g 8.75
CHOLESTERYL METHYLCARBONATE			CHOLIC ACID		
10056	Reagent $C_{27}H_{45}OCOOCH_3$ F.W. 444.70 Cholesteric Liquid Crystal Typical mesomorphic range: 110-112° (108° Ch) (Monotropic)	10 g 11.45	4952	Reagent M.P. 195-197° $C_{24}H_{40}O_5$ F.W. 408.58	25 g 7.05 100 g 19.30
CHOLESTERYL 2-METHYL-2-PROPENE -1-YL CARBONATE			CHOLINE (45% in Methanol by Titration)		
	see Cholesteryl Methallyl Carbonate 9839		8502-P	Practical $(CH_3)_3N(OH)CH_2CH_2OH$ F.W. 121.18	500 g 8.10 3 kg 30.40
CHOLESTERYL MYRISTATE			CHOLINE CHLORIDE		
9693	Reagent Mesomorphic $CH_3(CH_2)_{12}COOC_{27}H_{45}$ F.W. 597.03 Cholesteric Liquid Crystal Typical mesomorphic range: C-S 71, S-Ch 79, Ch-I 83°	10 g 8.45 25 g 14.75	1122	Reagent $(CH_3)_3NClCH_2CH_2OH$ F.W. 139.63 98% min. by Argentometric Titration	250 g 7.10 1 kg 18.30
CHOLESTERYL NITRATE			CHRISTENSEN CITRATE SULFIDE AGAR		
10663	Reagent $C_{27}H_{45}ONO_2$ F.W. 431.66 Cholesteric Liquid Crystal Typical mesomorphic range: 115-117 (103° Ch) (Monotropic)	5 g 16.65		see Diagnostic Section, BBL B11111	
CHOLESTERYL p-NITROBENZOATE			CHROMATOGRAPHIC COLUMN PACKINGS		
9697	Reagent $NO_2C_6H_4COOC_{27}H_{45}$ F.W. 535.77 Cholesteric Liquid Crystal Typical mesomorphic range: C-Ch 191, Ch-I 265°	25 g 13.60		see Colum Pak. Catalog No. C-587	
CHOLESTERYL NONANOATE			CHROME ALUM		
9669	Reagent $CH_3(CH_2)_7COOC_{27}H_{45}$ F.W. 526.89 Cholesteric Liquid Crystal Typical mesomorphic range: C-S 78, S-Ch 79, Ch-I 90°	25 g 21.10 100 g 71.90		see Chromium (ic) Potassium Sulfate C-337	
CHOLESTERYL OCTANOATE			CHROME AZUROL S		
11528	Reagent $CH_3(CH_2)_6COOC_{27}H_{45}$ F.W. 512.86 Cholesteric Liquid Crystal Typical mesomorphic range: 104-106° (91° Ch) (Monotropic)	25 g 8.70 100 g 25.95	8059-P	Practical 2,6-Cl ₂ C ₆ H ₂ -3-(SO ₃ Na)-C- (C ₆ H ₂ -4'-O-3'-CH ₃ -5'-COONa)- (C ₆ H ₂ -3''-CH ₃ -4''-OH-5''-COONa) F.W. 605.31	100 g 11.50 500 g 37.15
CHOLESTERYL OLEATE			CHROME GREEN		
9720	Reagent F.W. 651.12 $CH_3(CH_2)_7CH:CH(CH_2)_7COOC_{27}H_{45}$ Cholesteric Liquid Crystal Typical mesomorphic range: C-S 39, S-Ch 44, Ch-I 49°C	25 g 28.45		see Chromium Oxide, sesqui- C-334	
CHOLESTERYL OLEYL CARBONATE			CHROMERGE		
10053	Reagent $C_{27}H_{45}OCOO(CH_2)_8CH:CH(CH_2)_7CH_3$ F.W. 681.14 Cholesteric Liquid Crystal Typical mesomorphic range: C-S -10, S-Ch 18, Ch-I 31°	5 g 9.75 25 g 31.55	ΔC-577	(Non-Mailable) For preparing Chromic Sulfuric Acid Solution Pk = 6x25 cc cs = 24x25 cc mix 25cc into 5 pt Concentrated Sulfuric Acid	pk 14.95 cs 53.75
CHOLESTERYL PALMITATE			CHROME YELLOW		
5264	Reagent $CH_3(CH_2)_{14}COOC_{27}H_{45}$ F.W. 625.08 Cholesteric Liquid Crystal Typical mesomorphic range: C-Ch 77, Ch-I 83°	10 g 9.55 25 g 17.55		see Lead Chromate L-48

CYCLOHEXANE, PESTICIDE GRADE
ΔC-553 (For Pesticide Residue Analysis) 1 gal 24.20
 Fisher CERTIFIED 4x1 gal, cs 74.00
 CH₂(CH₂)₄CH₂ F.W. 84.16

Test condition for gas chromatography
 using electron capture detection: 1
 nanogram of heptachlor epoxide gives
 approximately half scale deflection on
 chromatogram. Solvent suitability: no
 interfering G. L. C. peaks greater than that
 given by 0.02 nanogram/ml of heptachlor
 epoxide, tested separately on 10% Dow 11
 and 2% QF-1, each on Chromosorb W.

DIMETHYLGLYOXIME, crystal	1 oz	5.00
D-62 Fisher CERTIFIED ACS	6x1 oz, cs	24.00
CH ₃ C:NOHC:NOHCH ₃	1/4 lb	13.15
F.W. 116.12	6x1/4 lb, cs	63.00
	1 lb	35.65
	6x1 lb, cs	171.00

Actual Lot Analysis Reported on Label		
Melting Point	about 240°C	
Insoluble in Alcohol	0.05%	
Residue after Ignition	0.05%	
Suitability for Nickel	To pass test	

DIMETHYL GLYOXIME	100 g	6.55
98-P Practical 96% min.	500 g	16.55

DIMETHYL GLYOXIME SOLUTION 1%	1 pt	6.30
ΔSo-D-52 (Non-Mailable)	6x1 pt, cs	20.64
For determination of Nickel in iron or steel (Murray and Ashley)		

DIMETHYL GLYOXIME DISODIUM SALT	500 g	32.55
D-61 crystal Fisher CERTIFIED ACS	6x500 g, cs	156.30
CH ₃ C:NONaC:NONaCH ₃ ·8H ₂ O		
F.W. 304.21		

Actual Lot Analysis Reported on Label		
Assay (CH ₃ C:NONaC:NONaCH ₃ ·8H ₂ O)	Not less than 98%	
Solubility in Water (Clarity)	to pass test	
Water	Not more than 48%	

1,1-DIMETHYLGUANIDINE SULFATE	25 g	11.70
1491 Reagent	100 g	31.70
[(CH ₃) ₂ NC(:NH)NH ₂] ₂ ·H ₂ SO ₄ F.W. 272.33

ETHYL m-AMINOBENZOATE METHANE-SULFONATE 9671 Reagent M.P. 149-151° $NH_2C_6H_4COOC_2H_5 \cdot CH_3SO_3H$ F.W. 261.30	5 g 25 g	9.45 30.25	ETHYL BROMIDE E-149 Fisher REAGENT C_2H_5Br F.W. 108.97 (Non-Mailable) Maximum Limits of Impurities Assay (C_2H_5Br) Not less than 99.0% Acidity Pass Fisher test Water (H_2O) 20 Color (APHA) 20	1 pt (1.5 lb) 6x1 pt, cs	12.05 57.84
ETHYL p-AMINOCINNAMATE 10143 Reagent M.P. 73-74° $NH_2C_6H_4CH:CHCOOC_2H_5$ F.W. 191.23	5 g 25 g	14.15 53.90	ETHYL BROMIDE 114-P Practical	1 kg 5 gal	9.80 142.00
2-ETHYLAMINOETHANOL 7049-P Practical M.P. -9 to -7° $C_2H_5NHCH_2CH_2OH$ F.W. 89.14	250 g 1 kg	5.10 10.45	ETHYL BROMOACETATE 995 Reagent B.P. 57-59°/15 mm $CH_2BrCOOC_2H_5$ F.W. 167.01 (Non-Mailable)	25 g 100 g	6.05 12.80
9-ETHYLAMINO-5-ETHYLIMINO-10-METHYL-5H-BENZO[a]PHENOXAZONIUM PERCHLORATE (Laser Grade) see Oxazine 170 Perchlorate (Laser Grade) 14375			ETHYL p-BROMOBENZOATE 8206 Reagent B.P. 115-116°/5 mm $BrC_6H_4COOC_2H_5$ F.W. 229.08	100 g	37.65
7-ETHYLAMINO-6-METHYL-4-TRIFLUOROMETHYLCOUMARIN (Laser Grade) see Coumarin 307 (Laser Grade) 14370			ETHYL 2-BROMOBUTYRATE 994 Reagent B.P. 64-66°/8 mm $CH_3CH_2CHBrCOOC_2H_5$ F.W. 195.06	25 g 100 g	7.75 18.35
2-(ETHYLAMINO)-1,3,4-THIADIAZOLE 9620 Reagent M.P. 71-73° $SCH:NN:CNHC_2H_5$ F.W. 129.19	5 g	10.80	ETHYL α-BROMOCAPROATE see Ethyl 2-Bromohexanoate 1474		
N-ETHYLANILINE 486 Reagent B.P. 97-98°/21 mm $C_6H_5NHC_2H_5$ F.W. 121.18 (Mail up to 100 g)	100 g 500 g	8.20 26.30	ETHYL 2-BROMOHEXANOATE 1474 Reagent B.P. 93-95°/15 mm $CH_3(CH_2)_3CHBrCOOC_2H_5$ F.W. 223.12	25 g 100 g	13.80 42.50
N-ETHYLANILINE 486-P Practical B.P. 200-205° (Mail up to 100 g)	500 g 3 kg	6.20 19.05	ETHYL 2-BROMO-3-METHYLBUTYRATE 1296 Reagent B.P. 75-78°/12 mm $(CH_3)_2CHCHBrCOOC_2H_5$ F.W. 209.09	25 g	15.50
o-ETHYLANILINE 3066-P Practical B.P. 90-92°/8 mm $C_2H_5C_6H_4NH_2$ F.W. 121.18 (Mail up to 100 g)	250 g	7.00	ETHYL 2-BROMOPROPIONATE 1041 Reagent B.P. 54-56°/13 mm $CH_3CHBrCOOC_2H_5$ F.W. 181.03	100 g 250 g	20.80 46.50
p-ETHYLANILINE 3059 Reagent B.P. 90-91°/6 mm $C_2H_5C_6H_4NH_2$ F.W. 121.18 98% min. by nonaqueous titration $n_D^{20} = 1.5550 \pm 0.0010$ Intermediate for the preparation of nematic liquid crystals	100 g 500 g	8.25 29.90	ETHYL 3-BROMOPROPIONATE 1487 Reagent B.P. 67-69°/10 mm $CH_2BrCH_2COOC_2H_5$ F.W. 181.03	25 g 100 g	6.85 14.70
N-ETHYLANILINE HYDROCHLORIDE 9312 Reagent M.P. 177-180° $C_6H_5NHC_2H_5 \cdot HCl$ F.W. 157.64	100 g	8.35	ETHYL 2-BROMOTETRADECANOATE 8537 Reagent M.P. 7-12° $CH_3(CH_2)_{11}CHBrCOOC_2H_5$ F.W. 335.33 90% min. by G.L.C.	5 g	5.35
ETHYL ANISATE 1706 Reagent M.P. 6.5-8.5° $4-CH_3OC_6H_4COOC_2H_5$ F.W. 180.20	100 g	12.80	ETHYL BUTYRATE 374 Reagent B.P. 119-121° $CH_3(CH_2)_2COOC_2H_5$ F.W. 116.16 (Mail up to 3 kg)	250 g 1 kg	6.70 16.75
ETHYL-o-ANISOYLACETATE 5607-P Practical B.P. 127-130°/1 mm $CH_3OC_6H_4COCH_2COOC_2H_5$ F.W. 222.24	25 g	27.50	2-ETHYLBUTYRIC ACID (Ester free) 1831 Reagent B.P. 193-195° $(C_2H_5)_2CHCOOH$ F.W. 116.16	100 g	12.70
ETHYL ANTHRANILATE 1708 Reagent M.P. 13-14° $2-NH_2C_6H_4COOC_2H_5$ F.W. 165.19	100 g 500 g	7.70 27.10	2-ETHYLBUTYRYL CHLORIDE 6138 Reagent B.P. 137-139° $(C_2H_5)_2CHCOCl$ F.W. 134.61 (Non-Mailable)	100 g 500 g	16.55 63.15
p-ETHYLBENZALDEHYDE 3515 Reagent B.P. 80-83°/1 mm $C_2H_5C_6H_4CHO$ F.W. 134.18 98% min. by Titration Nematic liquid crystal intermediate	5 g 25 g	14.15 53.95	ETHYL CAPRATE see Ethyl Decanoate 1178		
ETHYLBENZENE 719 Reagent M.P. 134-136° $C_2H_5C_6H_5$ F.W. 106.17	1 kg 3 kg	8.60 15.75	α-ETHYLCAPROALDEHYDE see 2-Ethylhexanal 4361-P		
ETHYL BENZOATE 112 Reagent B.P. 100-102°/20 mm $C_6H_5COOC_2H_5$ F.W. 150.18	500 g 3 kg	9.55 39.20	ETHYL CAPROATE see Ethyl Hexanoate 413-P		
2-[(3-ETHYL-2(3H)BENZOTHAZOLIN- YLIDENE)-METHYL]-4-[3-(3-ETHYL-2(3H)-BENZOTHAZOLINYLIDENE) PROPENYL]-5,6-BENZOPYRYLIUM IODIDE (Laser Grade) see IR-123 (Laser Grade) 14404			α-ETHYL CAPROIC ACID see 2-Ethylhexanoic Acid 4442-P		
			ETHYL CAPRYLATE see Ethyl Octanoate 890		
			ETHYL CARBANILATE 1031 Reagent M.P. 49-51° $C_6H_5NHCOOC_2H_5$ F.W. 165.19	25 g 100 g	9.10 23.80
			ETHYL CARBAZATE 10473 Reagent M.P. 46-48° $NH_2NHCOOC_2H_5$ F.W. 104.11	25 g	10.40
			ETHYL CARBONATE see Diethyl Carbonate 654		

ETHYL CARBONIC ACID see Propionic Acid A-258				
ETHYL CELLULOSE low viscosity E-152	1 lb	11.25		
	6x1 lb, cs	54.00		
ETHYL CELLULOSE PHTHALATE 7484 Reagent	250 g	10.85		
	1 kg	29.05		
ETHYL CHLORIDE see Chloroethane 1075				
ETHYL CHLOROACETATE 115 Reagent B.P. 141-143° CH ₂ ClCOOC ₂ H ₅ F.W. 122.55	250 g	5.15		
	1 kg	10.50		
ETHYL CHLOROACETATE 115-P Practical	500 g	6.60		
	3 kg	21.55		
ETHYL 2-CHLOROACETOACETATE 2697-P Practical CH ₃ COCHClCOOC ₂ H ₅ F.W. 164.59 90% min. by G.L.C.	25 g	5.80		
	100 g	10.70		
ETHYL CHLOROFORMATE (Inhibited with 591 Calcium Carbonate) Reagent B.P. 92-94° ClCOOC ₂ H ₅ F.W. 108.52 (Non-Mailable)	100 g	6.95		
	500 g	16.90		
ETHYL CHLOROFORMATE (Inhibited with 591-P Calcium Carbonate) Practical B.P. 90-92° (Non-Mailable)	500 g	6.40		
ETHYL 3-CHLOROPROPIONATE 1410 Reagent B.P. 83-84°/55 mm CH ₂ ClCH ₂ COOC ₂ H ₅ F.W. 136.58	25 g	14.65		
	100 g	45.95		
ETHYL CHLOROSULFONATE 1873 Reagent B.P. 62-63°/32 mm C ₂ H ₅ OSO ₂ Cl F.W. 144.58 (Non-Mailable)	100 g	18.80		
	500 g	77.95		
ETHYL CHRYSANTHEMATE 14480 Reagent B.P. 110-113°/10 mm 99% min. by G.L.C. Isomer content: 40% cis, 60% trans F.W. 196.29	100 g	15.30		
ETHYL CINNAMATE 116 Reagent M.P. 6.5-7.5° C ₆ H ₅ CH:CHCOOC ₂ H ₅ F.W. 176.22	100 g	6.10		
	500 g	19.20		
ETHYL CROTONATE 3360 Reagent B.P. 136-137° CH ₃ CH:CHCOOC ₂ H ₅ F.W. 114.14	25 g	10.30		
	100 g	28.60		
ETHYL CYANOACETATE 555 Reagent B.P. 92-94°/10 mm NCCH ₂ COOC ₂ H ₅ F.W. 113.12	100 g	4.20		
	500 g	9.65		
ETHYL α-CYANOCINNAMATE 3486 Reagent M.P. 48.5-49.5° C ₆ H ₅ CH:C(CN)COOC ₂ H ₅ F.W. 201.23	25 g	10.50		
	100 g	29.60		
ETHYL CYCLOHEXANECARBOXYLATE 6289 Reagent B.P. 194-196° C ₆ H ₁₁ COOC ₂ H ₅ F.W. 156.23	100 g	33.25		
ETHYL DECANOATE 1178 Reagent B.P. 110-112°/10 mm CH ₃ (CH ₂) ₈ COOC ₂ H ₅ F.W. 200.32	25 g	8.25		
	100 g	20.50		
ETHYL DIBROMOACETATE 1027-P Practical B.P. 75-79°/12 mm CHBr ₂ COOC ₂ H ₅ F.W. 245.91 (Non-Mailable)	25 g	15.75		
	100 g	50.40		
ETHYL 2,3-DIBROMOPROPIONATE 6504 Reagent B.P. 81-83°/6 mm CH ₂ BrCHBrCOOC ₂ H ₅ F.W. 259.94	100 g	10.90		
	500 g	38.40		
ETHYL DICHLOROACETATE 1223 Reagent B.P. 155-157° CHCl ₂ COOC ₂ H ₅ F.W. 157.00	25 g	6.05		
	100 g	11.75		
N-ETHYLDICYCLOHEXYLAMINE 9446 Reagent B.P. 133-135°/8 mm (C ₆ H ₁₁) ₂ NC ₂ H ₅ F.W. 209.38	25 g	23.65
